

# Science

Presentation on "Science".  
Voloshchuk Anastasia

- We are living in the modern world, full of computers, automatic devices, gadgets, cell phones and many other different interesting and useful things that technological progress has given us for usage. Although not even years have passed as we couldn't even dream about time when it would be enough just to tap on a screen and get connected with the other person on the different end of the world.

- Science has given us possibility to fly into space and step on the moon, to start studying different parts of our galaxy and even farther. For example, what wonderful pictures of our galaxy and planets and stars surrounding Earth Hubble telescope has showed to us. Now we can develop further and maybe ever step on the other planets and even populate it.

- Technology has considerably made our life easier due to different discoveries. For example, nowadays we can travel with extremely high speed in different directions: many countries have high-speed trains which help us to feel comfortable all the way.

- Older people have different devices that have highly improved the level of their life, such as special cars for driving or hearing aid that helps them to no more feel useless in the society.

- On the other hand all this computerized environment may damage us too. Our children spend more and more time playing computer games, texting their friends instead of meeting them in the streets, living more and more in their own virtual world. Girls try to compete whose cell phone or tablet is better and more modern, or who has more friends on Facebook.

- Anyway technology has its advantages and disadvantages, but we cannot escape from progress, the development is inevitable. But our responsibility is to preserve ourselves as modern, just and peaceful civilization.
