

To clone or not to clone

- Recent advances in genetic biology have led us to quite a doubtful situation. People all over the world argue whether human cloning research should be controlled by government as solving problems connected with human cloning is definitely not a piece of cake.
- To my mind, human cloning experiments are extremely dangerous and I'm against cloning. To begin with, I should say that only God has the power to create life and cloning is against the laws of nature. Moreover, Cloning could go wrong and create deformed people so they could commit crimes, were used for tests or even to fight wars. Besides, clones could be discriminated against.
- However, scientists claim that human cloning could be very beneficial . Cloned organs could be used for transplants to cure incurable diseases. No doubt that cloning could help infertile people to have babies . It also could help people compensate for loss children.
- Frankly speaking I'm sure that anyone can replace your dead close people. Certainly it goes without saying , it puts at risk one's individuality and makes us less special and unique.
- To sum up, we must question whether human cloning is really worth it. From my point of view, human reproductive cloning should be under the tight control of the government as it is dangerous to interfere with nature and the consequences can be really dangerous.
