Dmitrieva A.

We want to introduce you to a city of great opportunities, including logistics. There are a lot of expensive modern buildings. In each of which can put a lot of offices and organizations.

Probable cost: 16 million euros.

A large advantage of the city - a lot of jobs, as in many organizations and factories.

We need to expand the company to open new branches in other places, because there is no space for expansion of our company

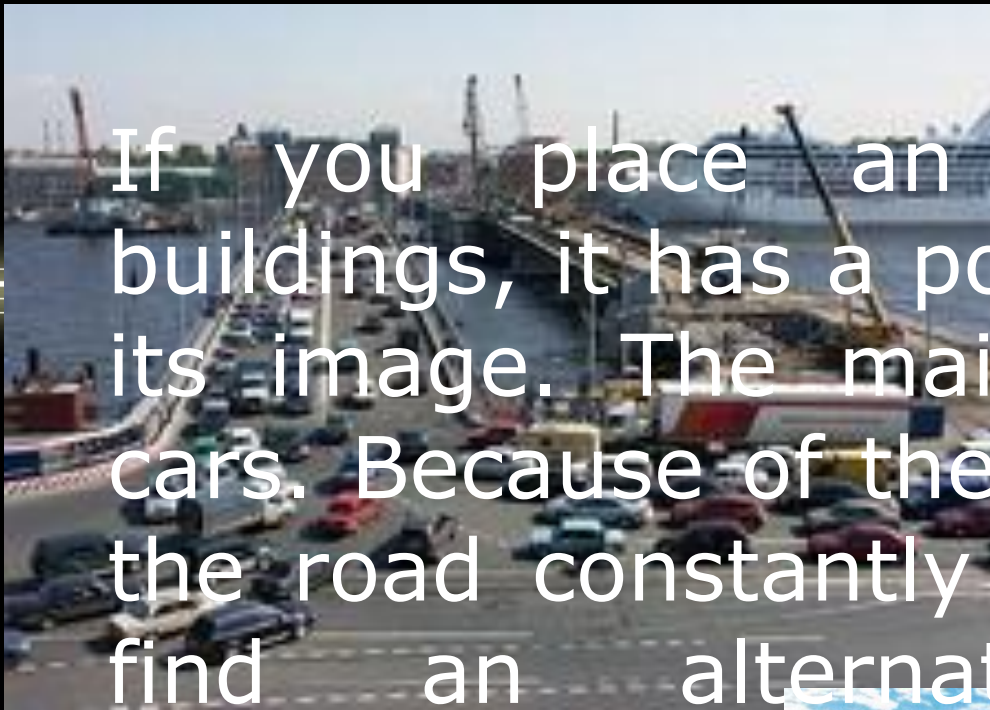

The disadvantage is that in many factories, the waste from which pollute the air. Care should be taken for safe disposal of waste.

If you place an office in our buildings, it has a positive impact on its image. The main transport are cars. Because of their abundance on the road constantly jams. It should find an alternative. In the countryside there is a big river, so you can use and water transport. Trams or boats. This is a convenient and pleasant.

And probably the biggest drawback - the lack of bridges. People are forced to pass through the city to get to the other side. This creates a lot of traffic jams and takes time. It's necessary to build more bridges

Thank you for your
attention
