Scientific method

“The scientific method is the process by which scientists, collectively and over time, endeavor to construct an accurate (that is, reliable, consistent and non-arbitrary) representation of the world.”

http://teacher.pas.rochester.edu/phy_labs/appendixe/appendixe.html

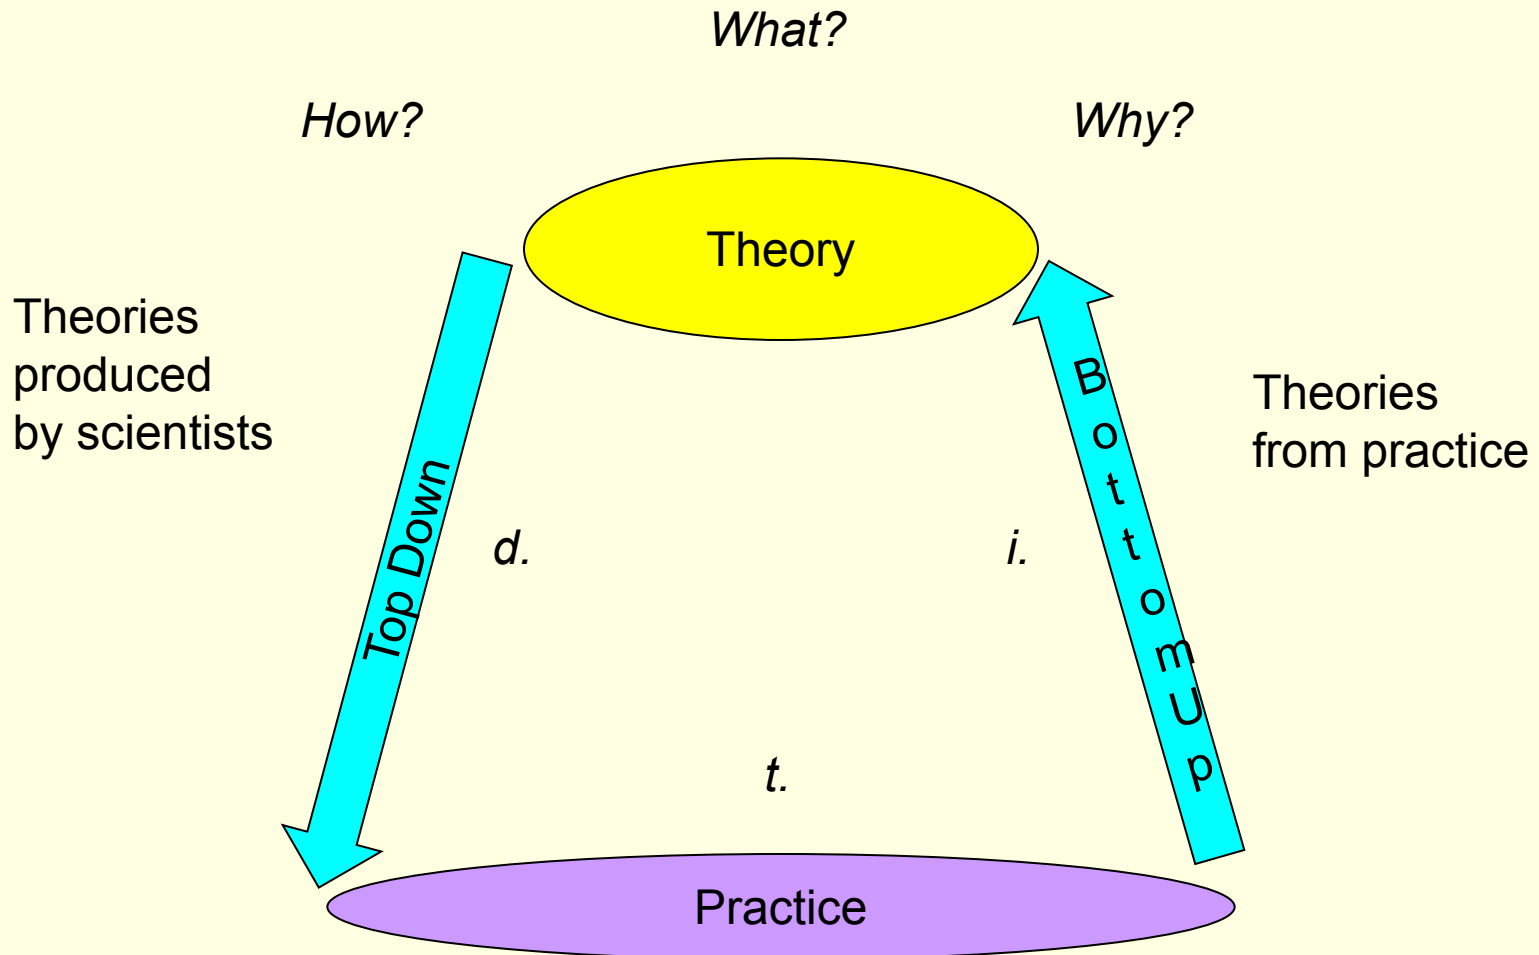

Theory vs. practice

“Theory is when you know everything but nothing works.

Practice is when everything works but no one knows why.

In our lab, theory and practice are combined: nothing works and no one knows why.”

Kinds of theories

Reasoning ways (laws of logic)

Induction (from specific observation to generalisation, bottom-up approach, complete and incomplete)

Deduction (from general rule to more specific case or top-down approach)

Traduction (same level of prerequisite and conclusion, i.e. specific-specific, analogy)

Common mistakes

- scientist's bias on the outcome
- “blindness” to important facts
- Inappropriate tools
- Tools applied in wrong way
- Wrong reason
- Cognitive radicalism or conservatism
- Ignorance of data that contradict hypothesis

Common mistakes

- Wrong reasoning
- Ignorance of data that contradict hypothesis
- Reported that similar research was done already
- Theory vs. practice

Theory vs. practice

“Darrow has concluded, after a life full of experience with criminals, "if doctors and scientists had been no wiser than lawyers, judges, legislatures and the public, the world would still be punishing imbeciles, the insane, the inferior and the sick; and treating human ailments with incantations, witchcraft, force and magic. We should still be driving devils out of the sick and into the swine.”

Fowler V. Harper, 1927
