

The Earth

Our planet is our home , isn't it ?

We have the blue sky

and the beautiful sun.

Look at our wonderful nature!

We have a lot of green forests,

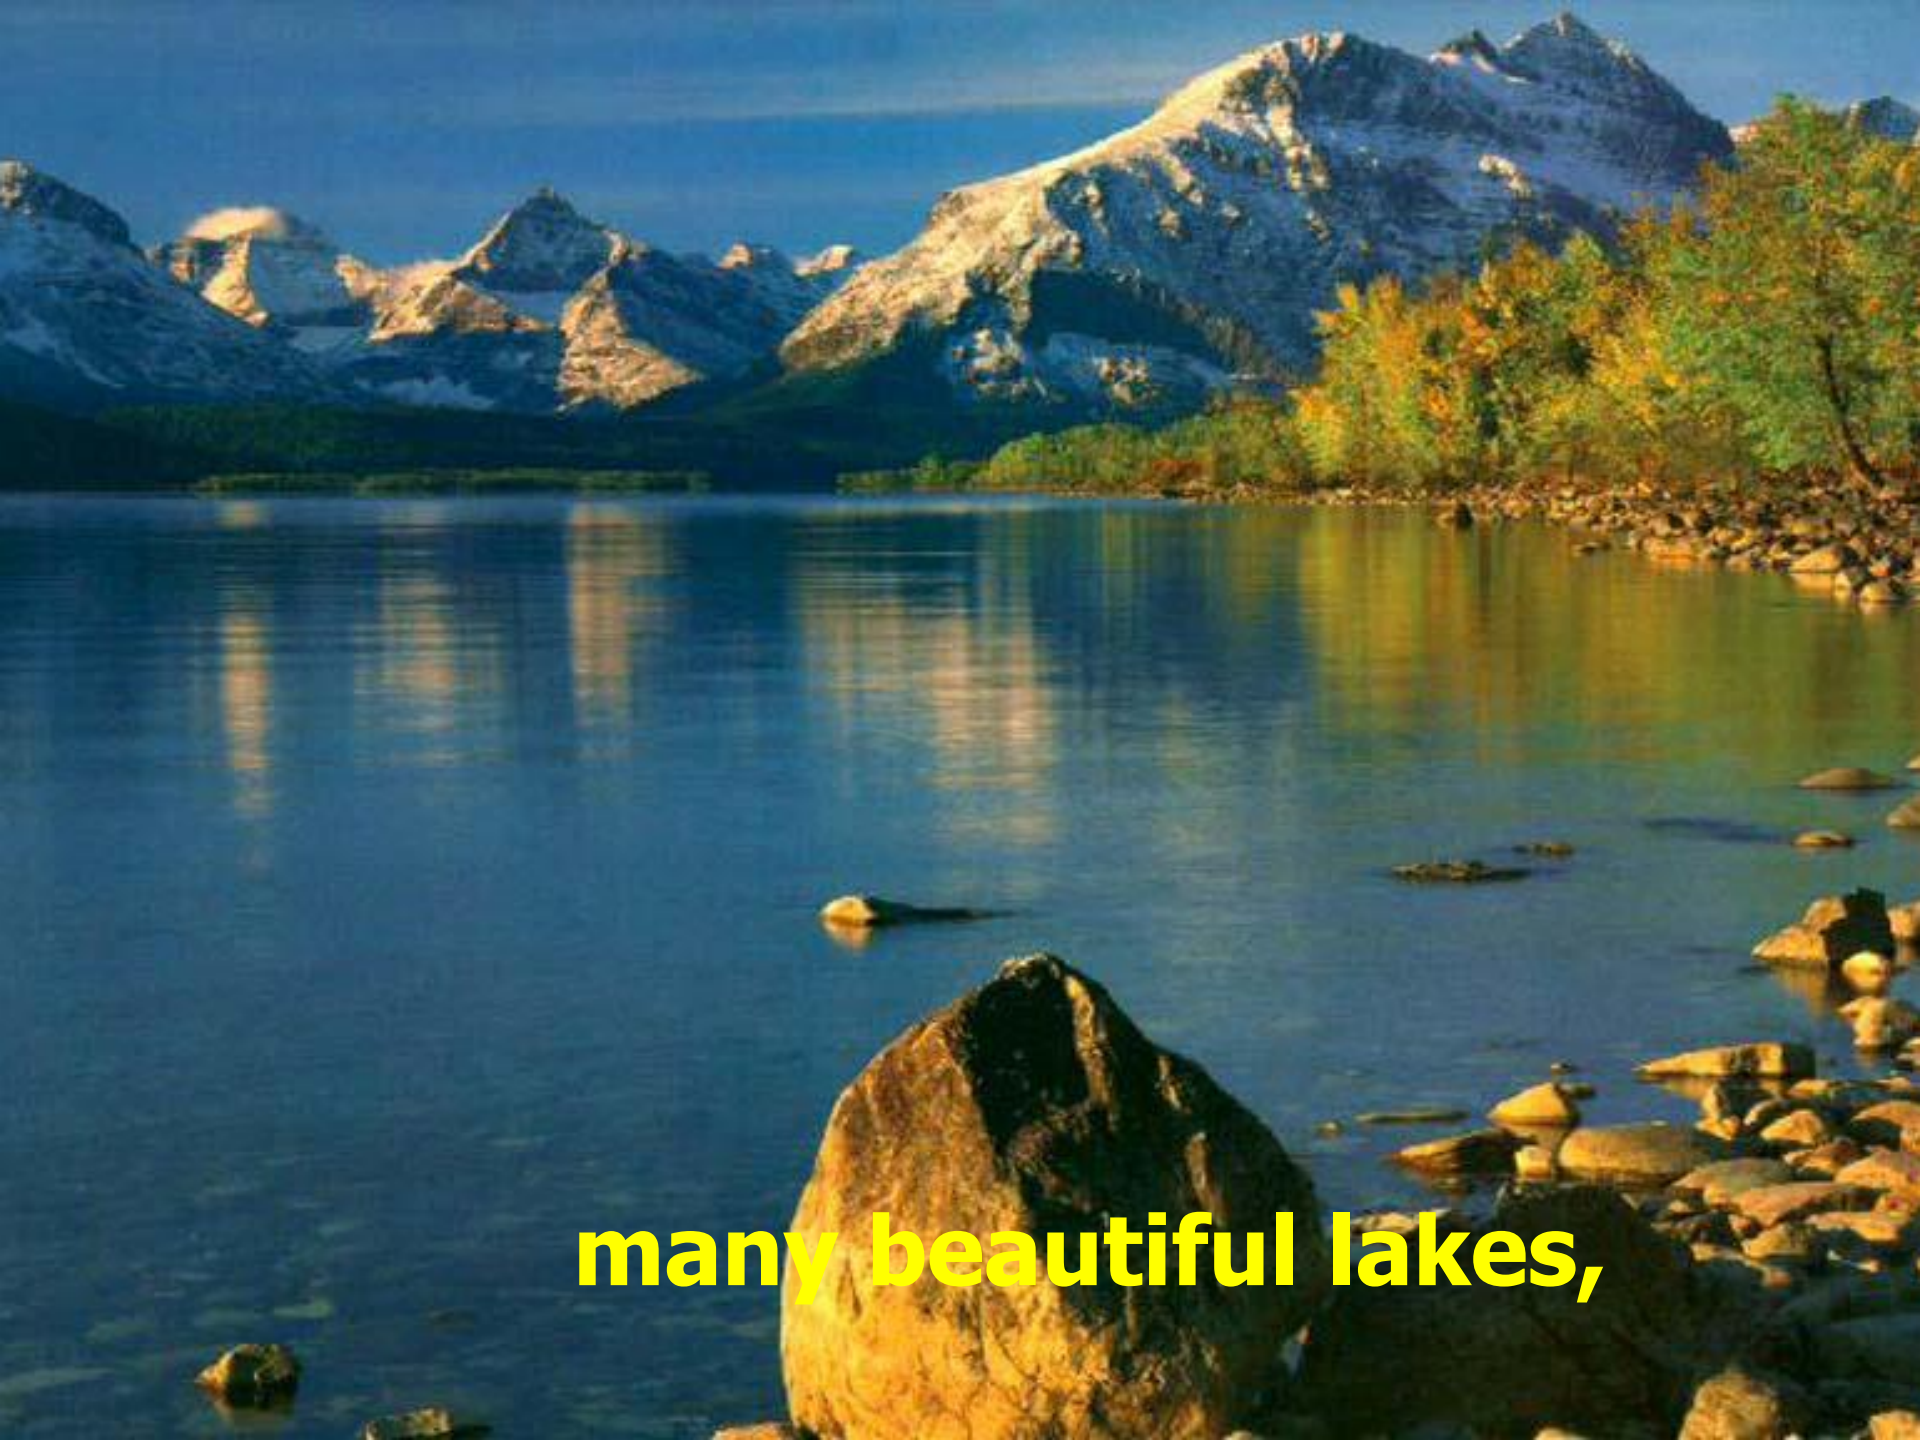

amazing plants,

clean air,

high mountains,

many beautiful lakes,

big oceans,

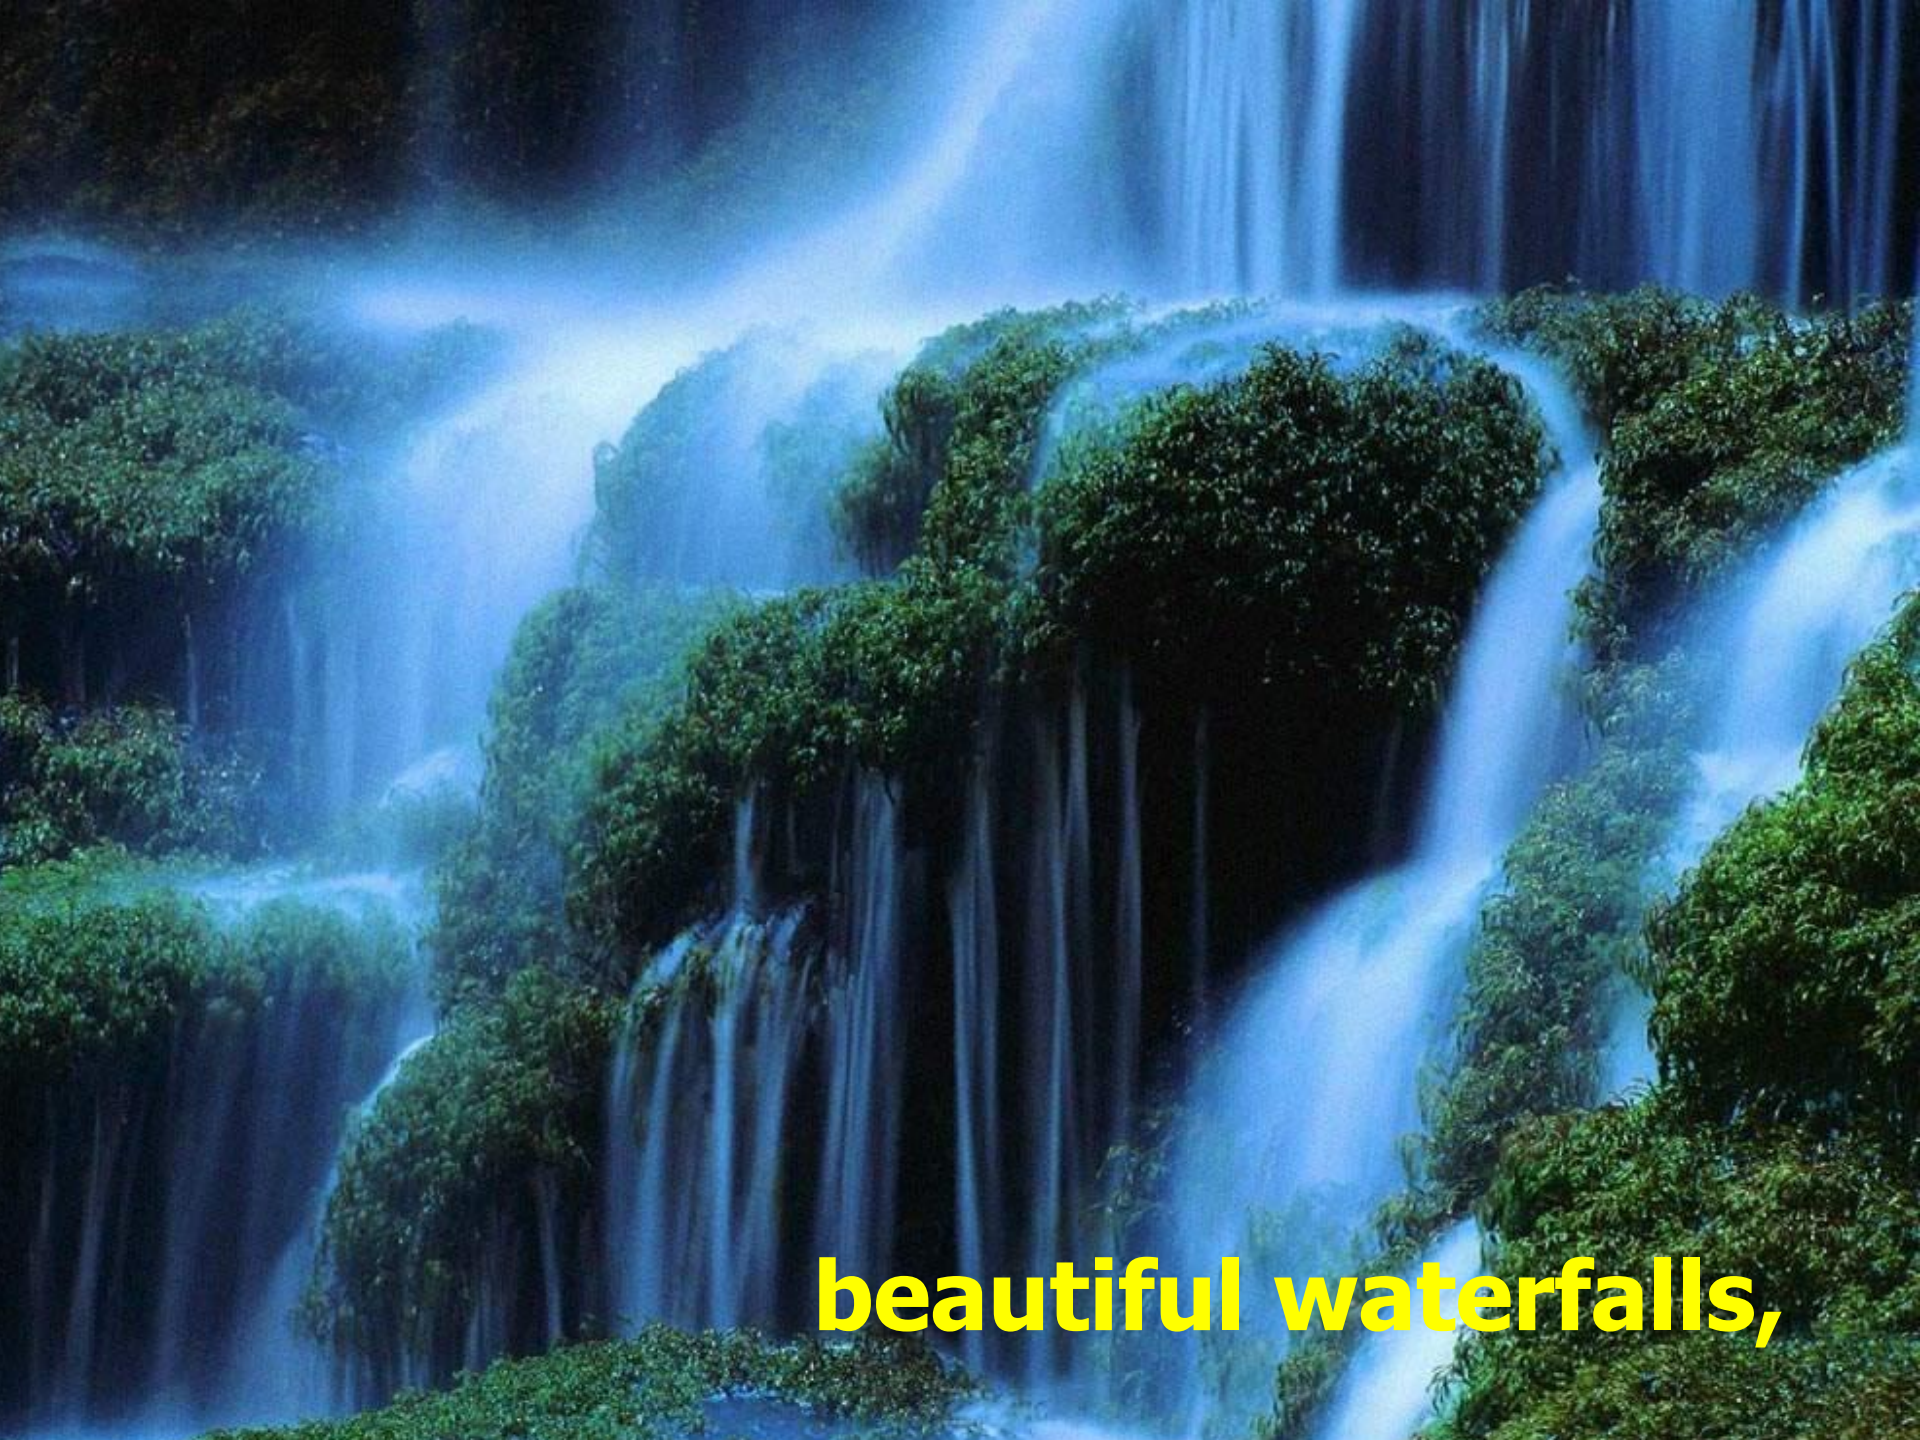

a lot of deep seas,

long rivers,

great and

beautiful waterfalls,

many wonderful fields

with different flowers.

Our world's fauna is extremely rich.

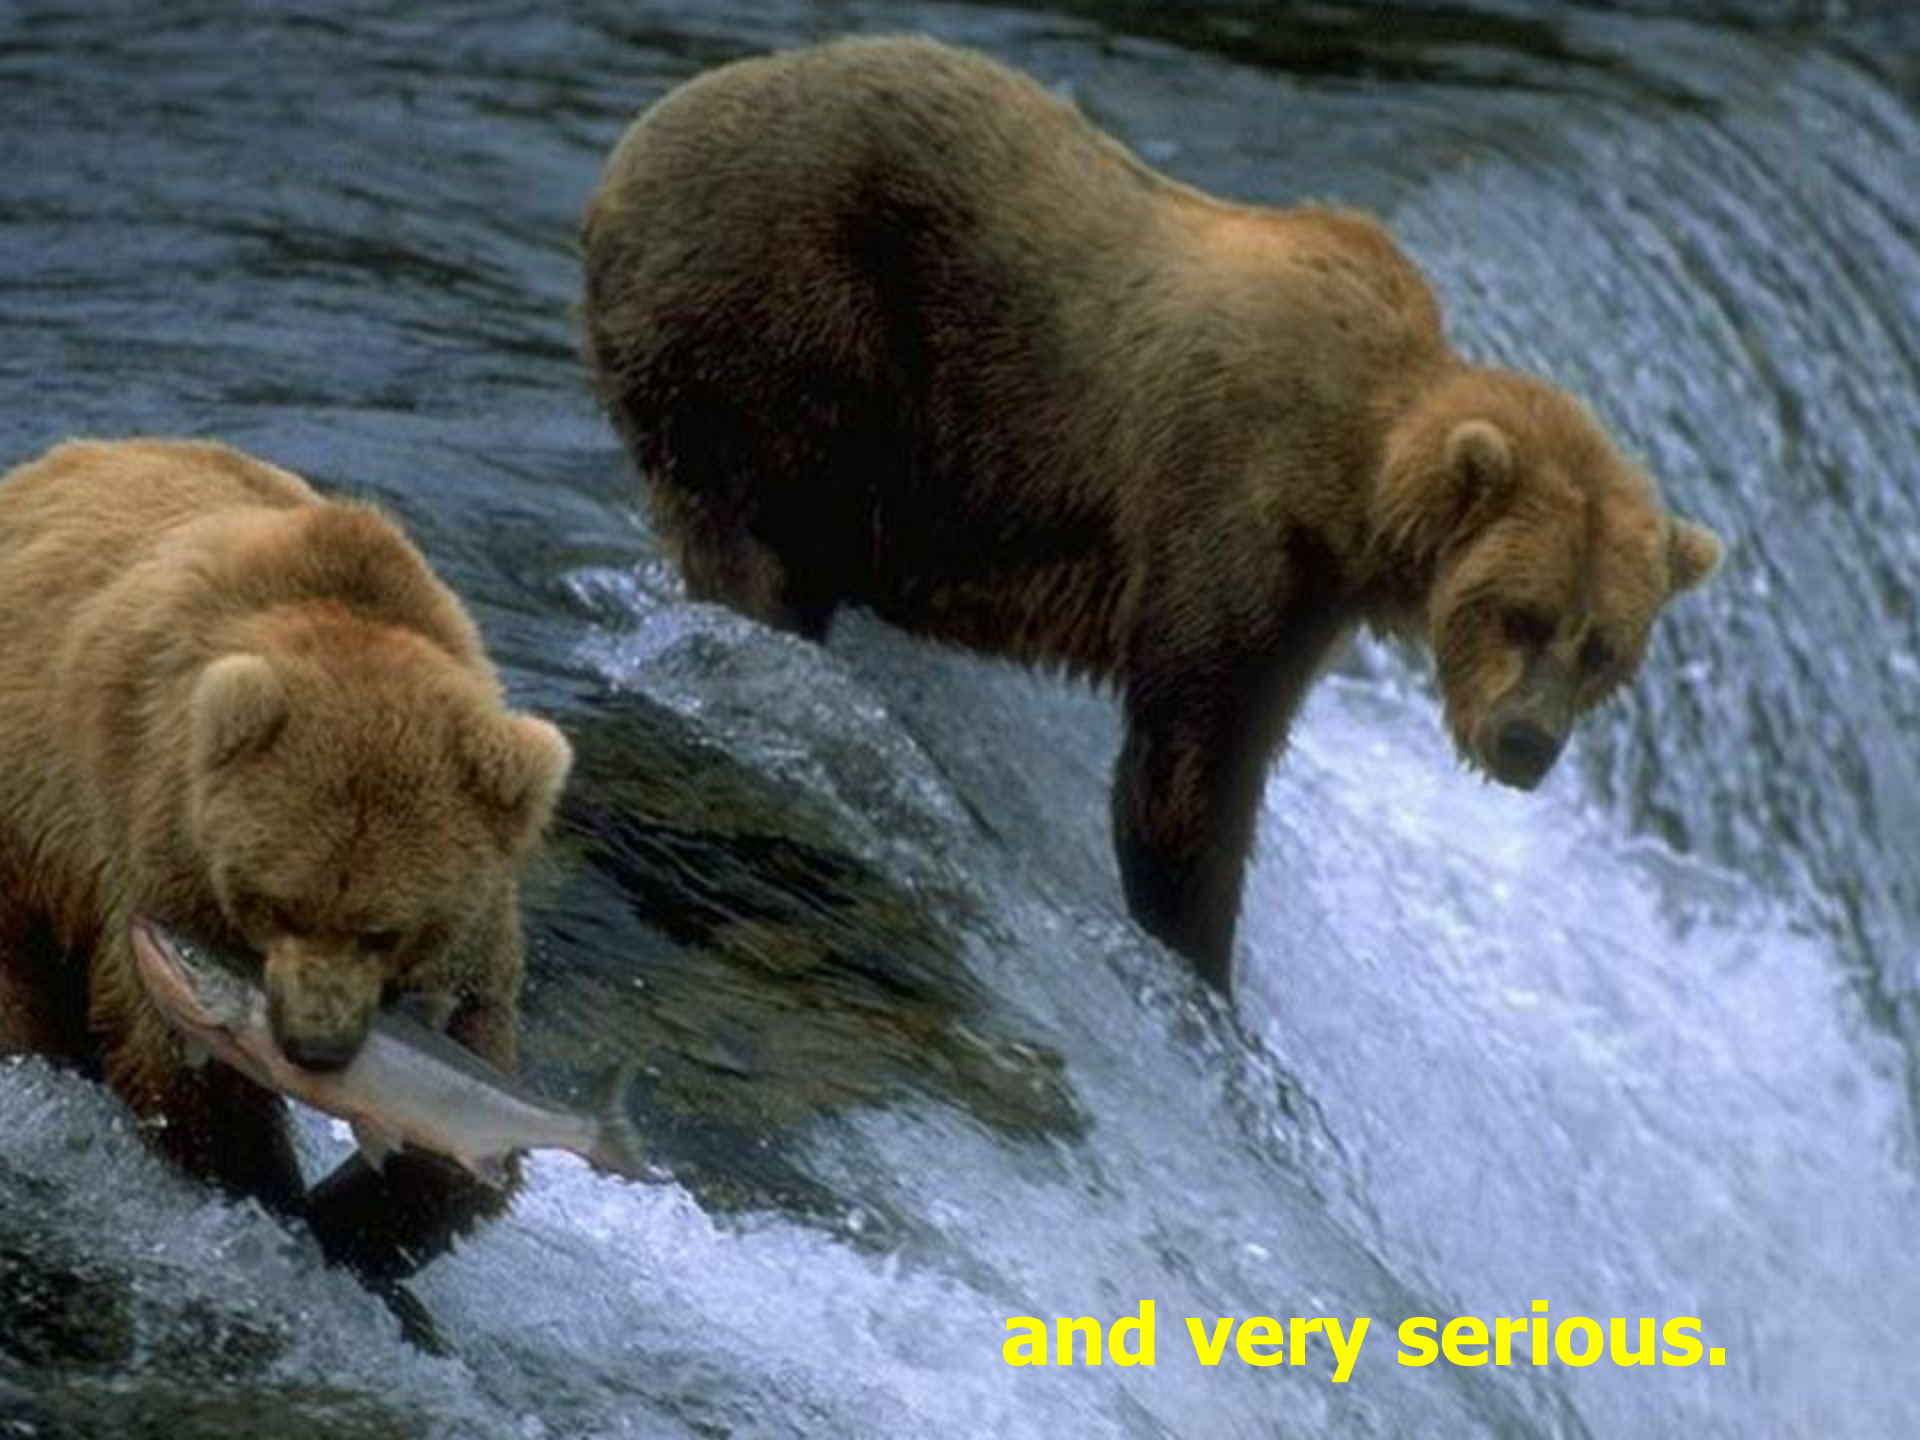

We have a lot of various species of birds

and animals.

They can be funny

and very serious.

Many marine animals live in the seas and oceans .

We can see big whales and small dolphins,

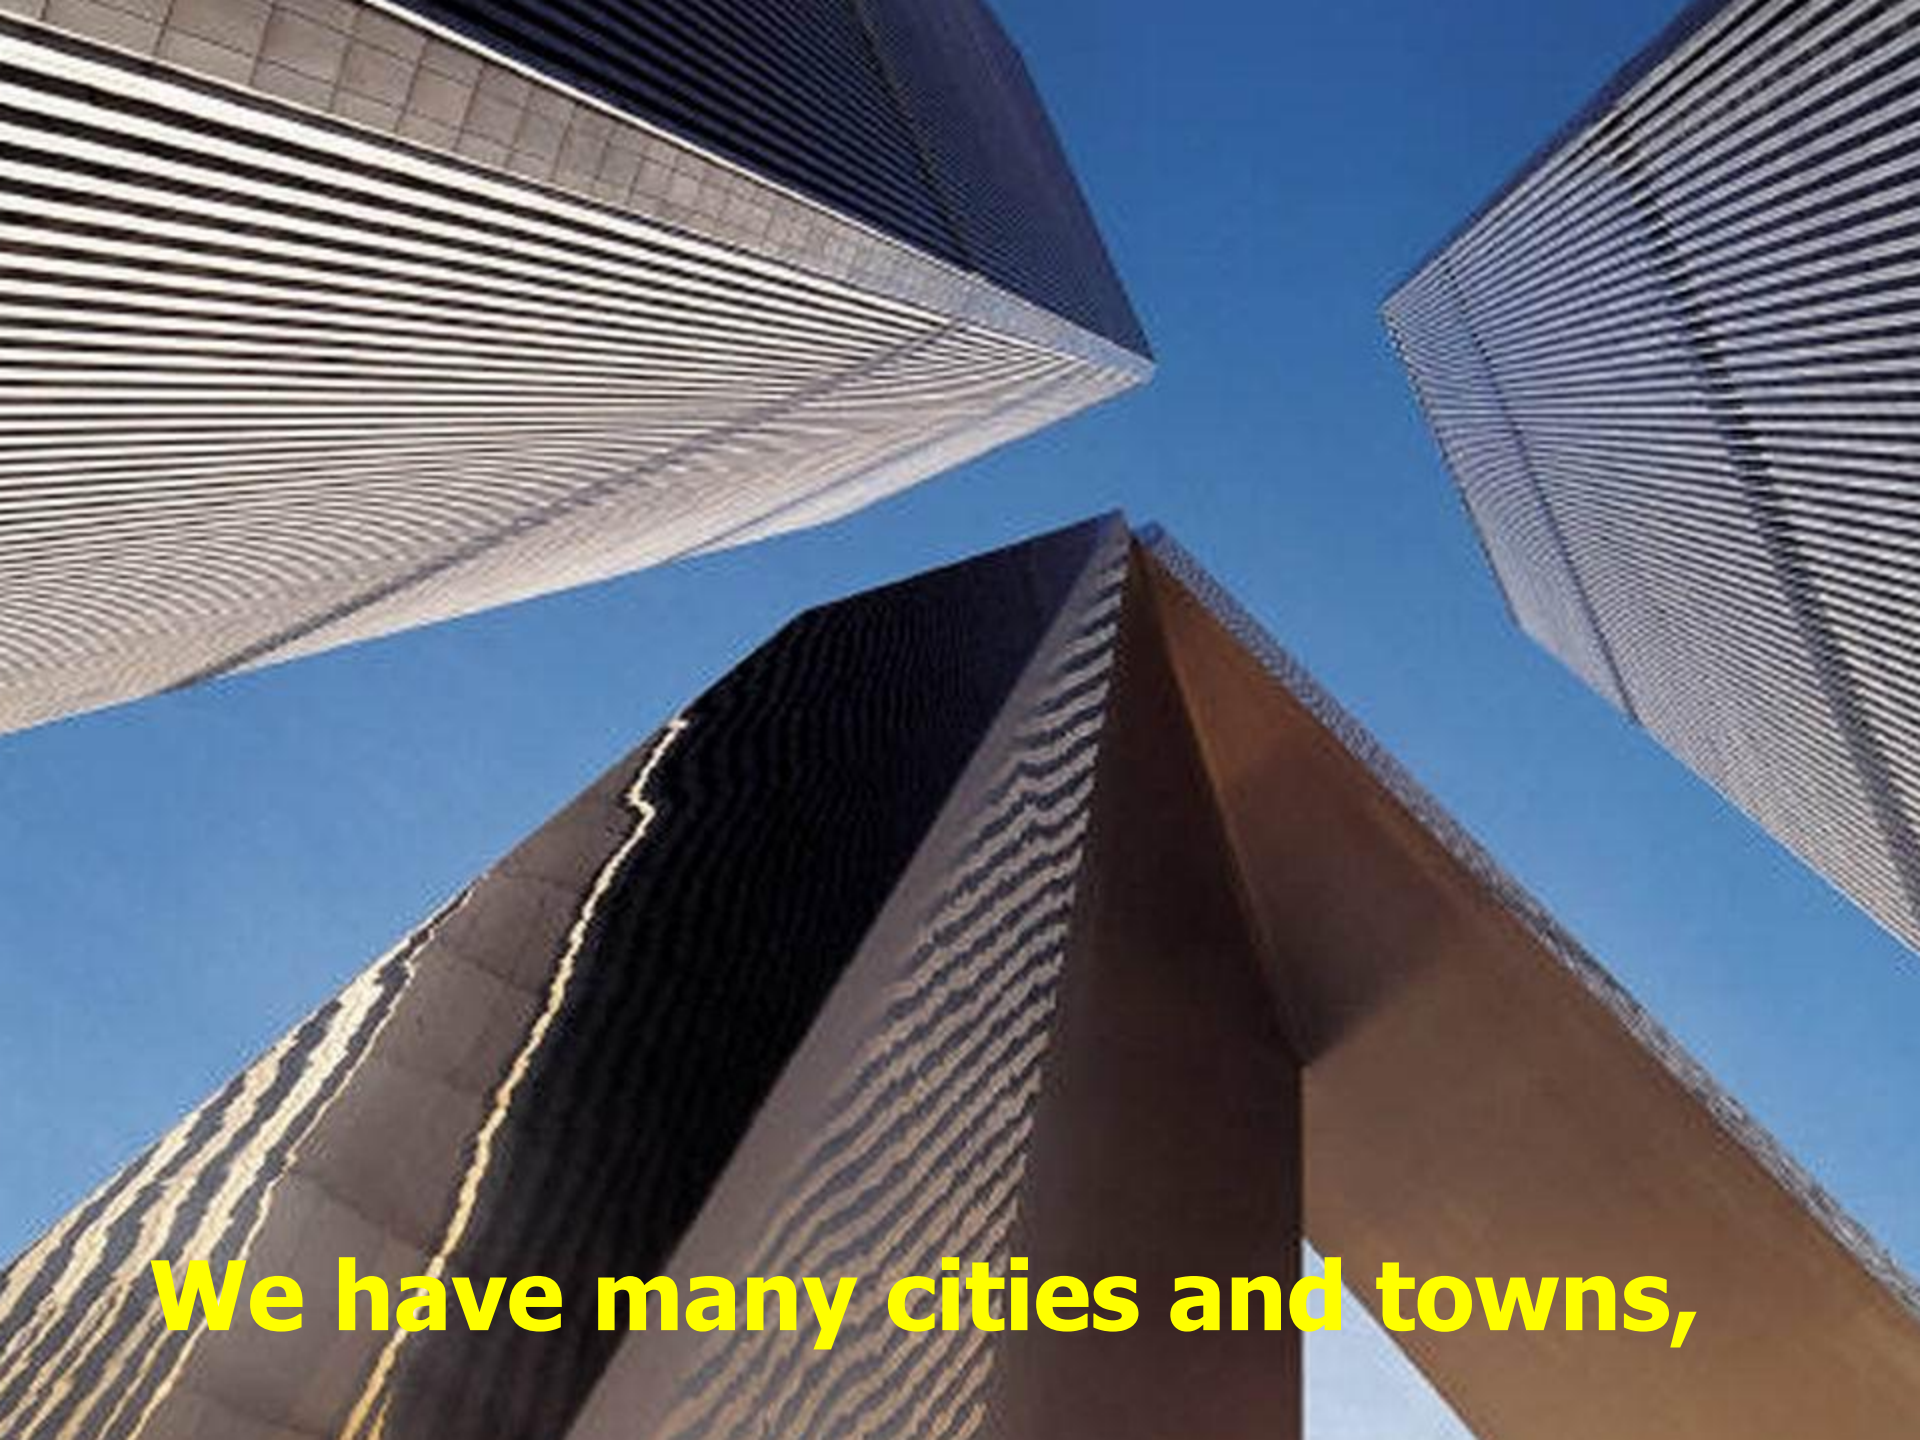

Admire our wonderful underwater world!

**Since ancient times Nature has served Man,
being the source of his life.**

But what is happening now?

We have many cities and towns,

Our population is growing very quickly .

We develop our civilization,

but spoil the environment,

© 2011 SHIR

Build a lot of railroads

and highways for our cars.

We need more cars, buses and motorbikes.

We pollute our air by chemicals,

Our nature resources are limited,

We develop different industries,

We kill a lot of trees ,

Vast forests are cut

and burn in fire.

People kill many birds and animals

As a result some rare species of animals disappear forever.

air pollution is not reduced,

A lot of rivers and lakes are polluted too

A number of rivers and lakes dry up.

But we try to change our attitude to the environment.

The countryside is cared for ,

We plant trees,

Work in the gardens and parks,

Save our recourses,

Reduce water pollution,

**And protect
nature.**

**We want to make the world
a better place!**

Will the Earth forgive us ?
