

Save the Earth!

The world's population
is 6 000, 000, 000!

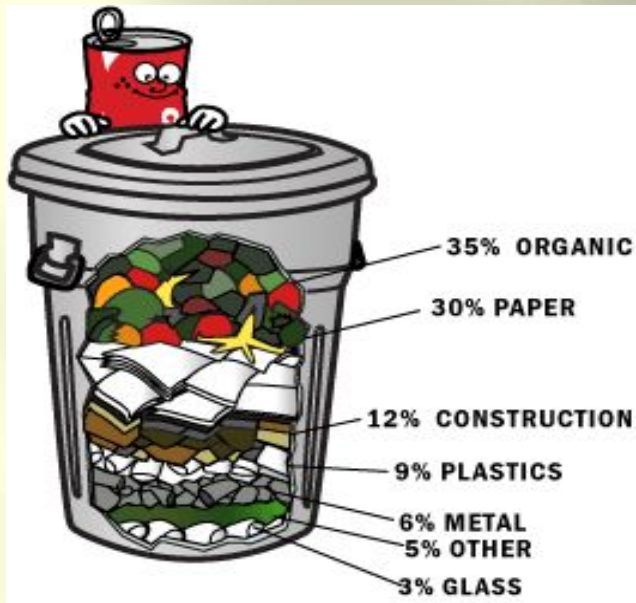

Our planet becomes more and more polluted.

We throw away and leave:

Plastic
bottles

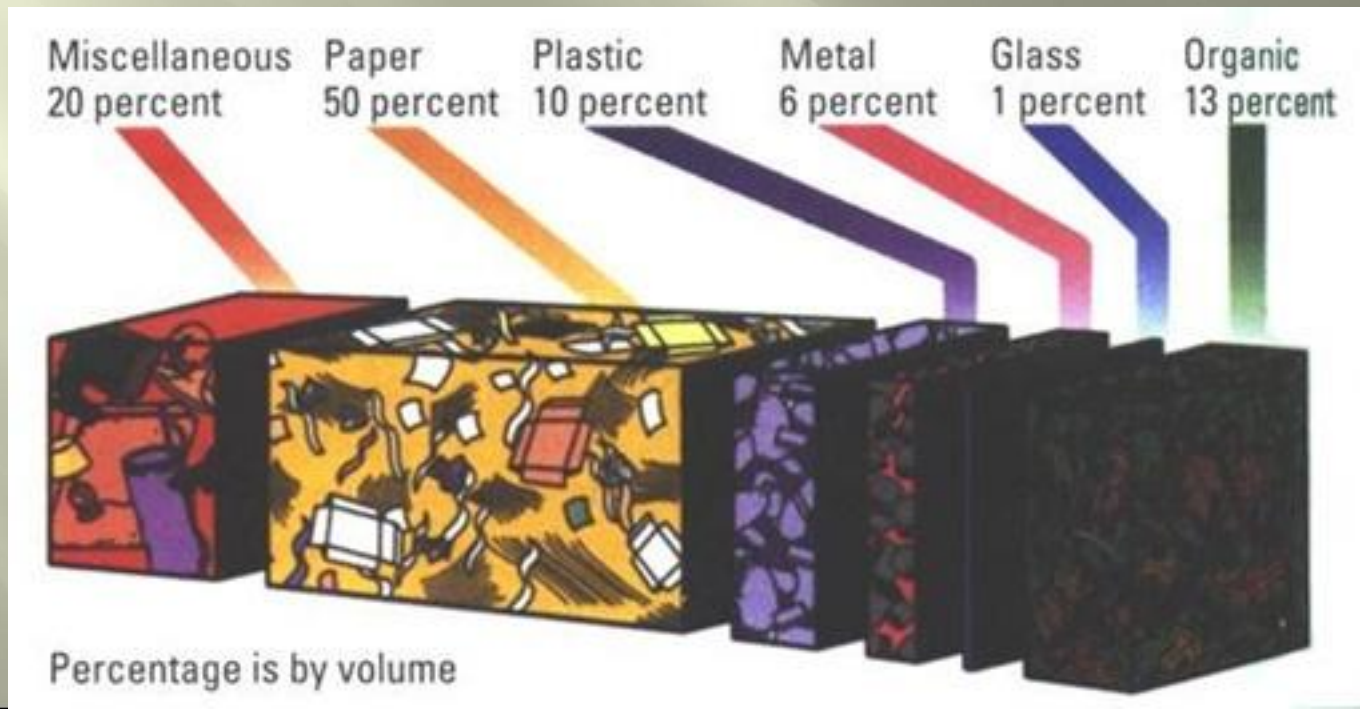

Glass
bottles

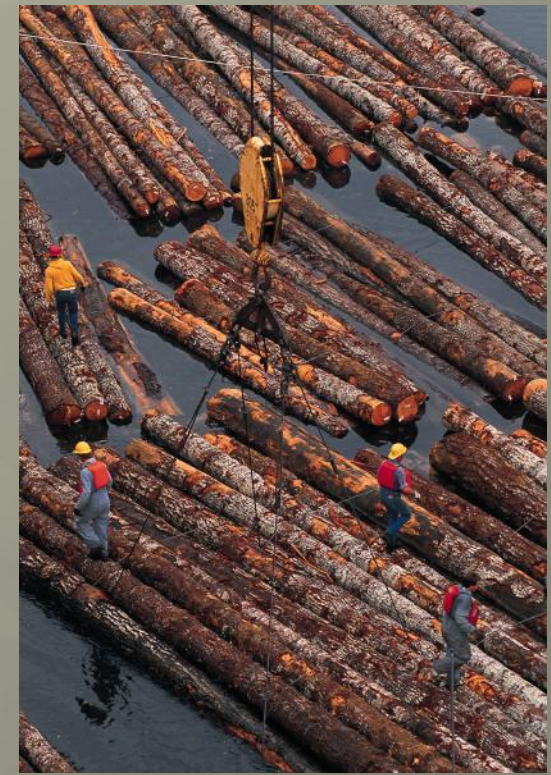

Cans

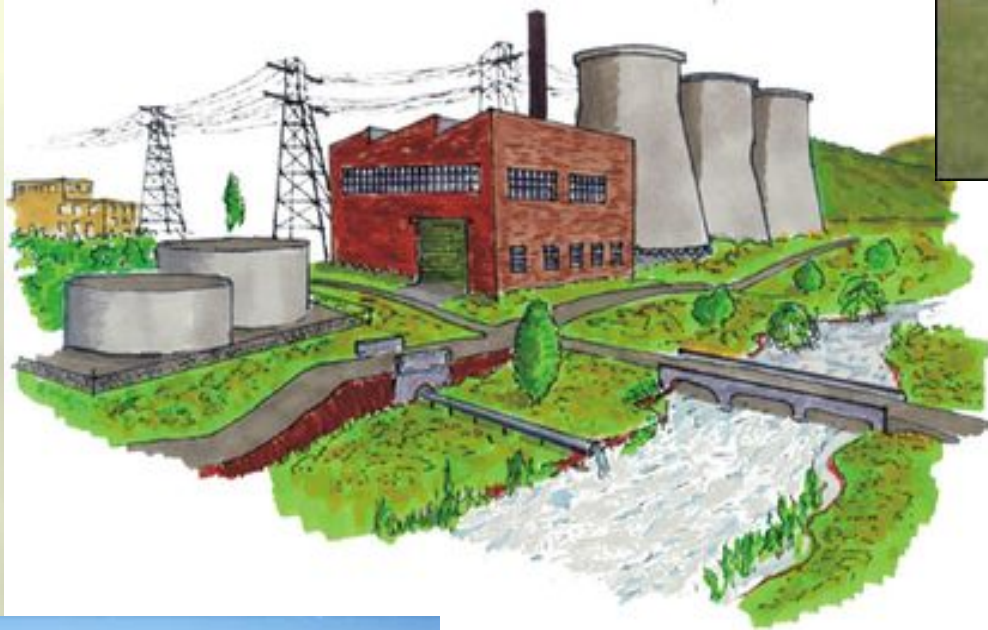

Paper

DEFORESTATION

We damage nature and spoil the environment.

We must remember the three R's:

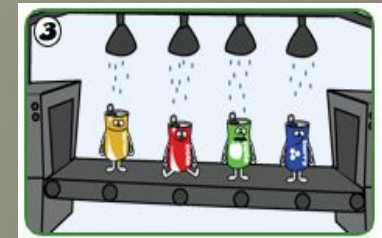

For example,

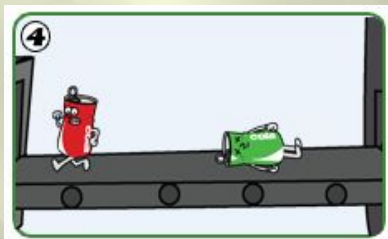

Throw the cans into a recycle bin.

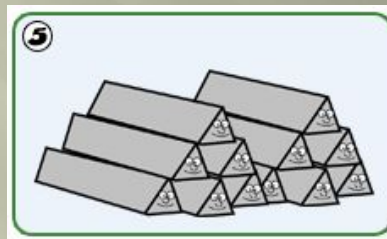

They are collected and taken to a treatment plant.

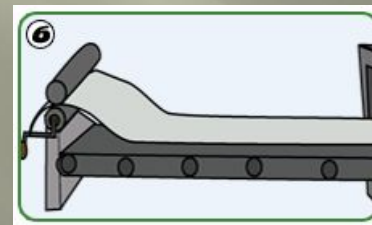

They are sorted and cleaned.

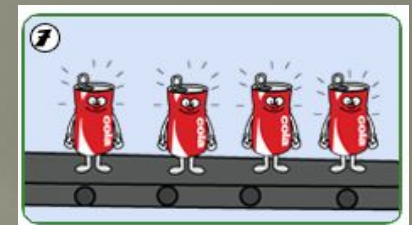

They turn into molten aluminium.

They are made into large blocks.

Then they are sent to mills where they are rolled out.

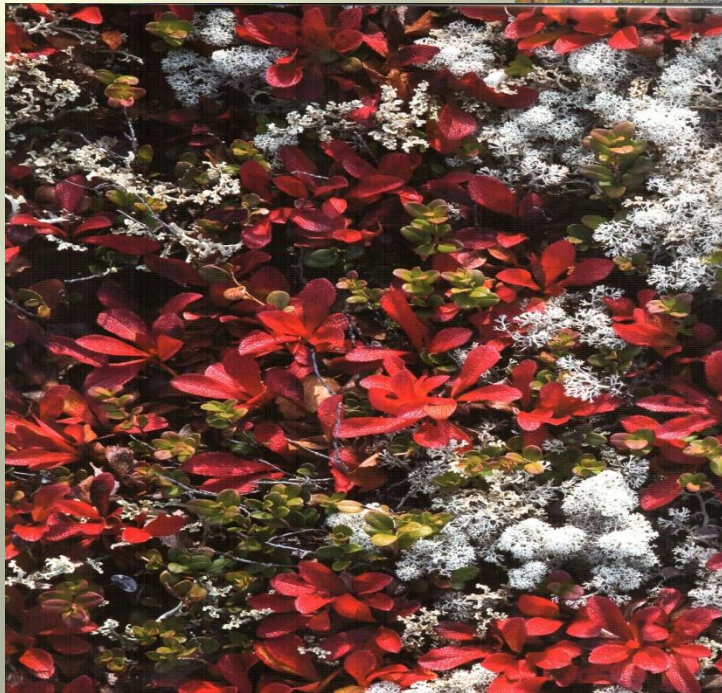

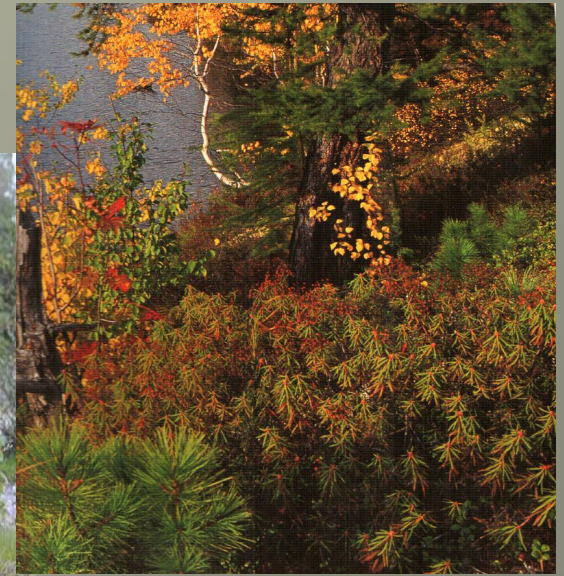

This is then made into aluminium products.

In as little as 6 weeks, the recycled products are sent back to the shops ready to be used again.

Our region

Protect wildlife, plants and trees.
