MARKET

Subject 2

World Energy Market. Market Situation

Main Points:

- 1. Definition of World Energy Market.**
- 2. Volume, Structure, Growth and Development Trends.**
- 3. Current State of Energy Markets.**

MARKET

Subject 2

World Energy Market. Market Situation

Main Points:

- 1. Definition of World Energy Market.**

World Energy Market

**is totality of world markets of
different energy resources**

World Oil Market

**World (International)
Gas Market**

World Coal market

**International Electricity
Markets**

**World Market of
Uranium Fuel**

**World Energy
Market**

Possibilities and Limits of Energy Resources Substitution

One type of energy resources may be substituted with another, but this has its limits

In the second half of the XX century oil made significant advances at the expense of coal, then natural gas presented a serious challenge at the end of the past and at the beginning of the XXI century

The latter half of the XX century saw increased interest in nuclear energy only to witness its subsequent gradual decrease. The end of the current decade is characterized by a renewal of interest in nuclear energy

Renewable energy has been gaining more supporters, however, all forecasts agree that its share in world energy production in the next 20 to 25 years will be modest at best

MARKET

Subject 2

World Energy Market. Market Situation

Main Points:

2. **Volume, Structure, Growth and Development Trends.**

World Oil Market

is unique

**World daily oil production
in 2011 reached 3995,6 mn t**

**About half of
extracted oil was
exported**

World Oil Production (mn tons)

2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011

World Coal Market

Global coal market consists of two segments

North Atlantic

Asian Pacific

Main Exporters

**US, APEC countries and
Latin American
countries, Poland, Russia**

**Australia. South Africa,
Canada**

Intrnational Electricity Markets

There is no world electricity market

Only 4 to 5 per cent of produced electricity enters international markets

States and countries prefer to import electric energy rather than export it

Big net exports of electricity (over 20 bn KWh per year) are effected by a handful of countries (Canada, Paraguay, France)

MARKET

Subject 2

World Energy Market. Market Situation

Main Points:

3. Current State of Energy Markets.

State of the Market

**Is the concrete situation in a particular market
at a given period of time**

**It is subject to constant change due to
various cyclical and non-cyclical
factors**

1. Production

2. Supply and Demand

3. Trade indicators

4. Prices

indicators

Crude oil price since 1861

Light Crude Oil (NYMEX)

How oil trade is organised

Oil and oil products are mainly trade on oil exchanges

How oil trade is organised

**Market mechanism of oil trade
has changed**

**Physical Market has developed into
financial (instead of crude oil, financial
contracts are traded)**

**physical market is a commodity market where
purchasers actually buy the commodities, as
opposed to the futures market, where they buy
and sell the right to purchase commodities at a
future date**

Crude oil is one of the world's most widely-used commodities and one of the most actively traded commodities worldwide

A key geo-political benchmark, the price of oil is among the most quoted statistics in business headlines today

That's why hedgers, traders and risk managers around the world rely on the ICE Brent, ICE WTI, ICE ASCI and ICE Gasoil futures markets
