III. Read and translate the texts

ASSETS LIABILITIES AND CAPITAL

Balance Sheet

Current assets

Fixed assets

Total assets

Liabilities

Shareholders' equity

Total liabilities and
Shareholders' equity

The balance sheet is a document which has two halves.
The totals of both halves are always the same, so they
balance.

One half shows a business's assets, which are things owned by the company, such as factories and machines, that will bring future economic benefits

The other half shows the company's liabilities, and its capital or shareholders' equity.

Since assets are shown as debits (as the cash or capital account was debited to purchase them), and the total must correspond with the total sum of the credits – that is the liabilities and capital – assets equal liabilities plus capital.

$$\text{Assets} = \text{Liabilities} + \text{Capital}$$

Liabilities often include

loans

taxes that will
soon have to be
paid future

pension payments
to employees

bills from suppliers

companies which provide
raw materials or parts

Most British companies use a vertical format, with assets at the top, and liabilities and capital below.

AmE: balance sheet
or statement of
financial position

BrE: balance sheet

AmE: stockholders equity

BrE: shareholders' equity;

SHAREHOLDERS' EQUITY

Shareholders' equity consists of all the money belonging to shareholders.

Part of this is share capital – the money the company raised

Shareholders' equity is the same as the company's net assets, or assets minus liabilities by selling its shares.
