Journal Alert
About

Have you subscribed to **free AMEDEO ?**

Free Medical Journals - Over the next few years, many important medical journals will be available online, free and in full-text. The access to free scientific knowledge will have a major impact on medical practice and attract Internet visitors to these journals. Journals that restrict access to their Web sites will lose popularity.

If you wish to be informed about new free journals, you may subscribe to our [Journal Alert](#). The Free Medical Journals Site is dedicated to the promotion of free access to medical journals over the Internet.

Пример систематического обзора

The screenshot displays the Cochrane Library interface. On the left, a search bar contains the text 'heart attack' with a 'Go' button. Below the search bar, there are navigation options: 'View selected', 'Unselect all', and 'Save selected'. A list of 17 search results is shown, with the 12th result, 'Dipyridamole for preventing stroke and other vascular events in patients with vascular disease', highlighted. The main content area shows the title of the review, the authors 'De Schryver ELLM, Algra A, van Gijn J', and the date of the most recent substantive amendment: '25 February 2002'. Below this, there is a citation for the review. The 'ABSTRACT' section is divided into three parts: 'Background', 'Objectives', and 'Search Strategy'. The 'Background' section states that patients with transient ischaemic attacks (TIA) and minor ischaemic strokes are at risk of serious vascular events and that aspirin offers only modest protection. The 'Objectives' section lists two goals: to assess the efficacy of dipyridamole versus control in the secondary prevention of vascular events in patients with vascular disease, and to assess the safety of dipyridamole versus control in the secondary prevention of vascular events in patients with vascular disease. The 'Search Strategy' section describes the search process, including the use of the Cochrane Stroke Group Trials Register and other relevant Cochrane Groups. The 'Selection Criteria' section details the inclusion criteria for the review, such as randomised long-term secondary prevention trials with concealed treatment allocation. The 'Data collection and analysis' section describes the methods used to select trials and extract data.

DIPYRIDAMOLE FOR PREVENTING STROKE AND OTHER VASCULAR EVENTS IN PATIENTS WITH VASCULAR DISEASE

De Schryver ELLM, Algra A, van Gijn J

Date of most recent substantive amendment: 25 February 2002

This review should be cited as: De Schryver ELLM, Algra A, van Gijn J. Dipyridamole for preventing stroke and other vascular events in patients with vascular disease (Cochrane Review). In: The Cochrane Library, Issue 3, 2003. Oxford: Update Software.

ABSTRACT

Background
Patients with transient ischaemic attacks (TIA) and minor ischaemic strokes are at risk of serious vascular events (death from all vascular causes, non-fatal stroke, or non-fatal myocardial infarction). Their risk of vascular events lies between 4 and 11 percent per year. Aspirin only, in a daily dose of 30 mg or more, offers only modest protection in such patients: it reduces the incidence of major vascular events by 13 percent. In a single trial, adding dipyridamole (an alternative antiplatelet agent) to aspirin was associated with a 22 percent reduction in the risk of major vascular events compared with aspirin alone. However, a systematic review of all trials of antiplatelet agents by the Antithrombotic Trialists' Collaboration showed that, in high risk patients, there was virtually no difference between the aspirin-dipyridamole combination and aspirin alone. We therefore sought to assess the effects of dipyridamole in more detail.

Objectives
1) To assess the efficacy of dipyridamole versus control in the secondary prevention of vascular events in patients with vascular disease in the presence and absence of other antiplatelet drugs.
2) To assess the safety of dipyridamole versus control in the secondary prevention of vascular events in patients with vascular disease in the presence and absence of other antiplatelet drugs.

Search Strategy
The Cochrane Stroke Group Trials Register was searched and other relevant Cochrane Groups were contacted to search their specialised registers (last search 29 April 2002). In addition the Cochrane Controlled Trials Register, MEDLINE and EMBASE were searched and Dutch manufacturers of dipyridamole were contacted to identify further published and unpublished studies.

Selection Criteria
Randomised long term secondary prevention trials with concealed treatment allocation, treatment for > 1 month, starting within 6 months after presentation of a arterial vascular disease were selected (coronary artery disease, myocardial infarction, angina pectoris, retinopathy, nephropathy, peripheral arterial disease, stroke, TIA, amaurosis fugax). Therapy consisted of dipyridamole in any dose in the presence or absence of other antiplatelet drugs compared with no drug or an antiplatelet drug(s) other than dipyridamole (control group).

Data collection and analysis
Two reviewers selected trials which met the inclusion criteria and extracted details of randomisation methods, blinding of treatments and assessments, whether intention-to-treat analysis was possible from the published data, whether treatment groups were comparable with regard to major prognostic factors, the number of patients who were excluded or lost to follow-up, definition of outcome events, and entry and exclusion criteria. The methodological quality of each trial was assessed by the two reviewers on the basis of these extracted data. In addition, dose and type of antiplatelet treatments, duration of follow-up, and the number of defined outcome events were recorded. Data published by the Antithrombotic

ПЕРВЫЙ ТАШКЕНТСКИЙ ГОСУДАРСТВЕННЫЙ МЕДИЦИНСКИЙ ИНСТИТУТ

o'zbekcha | русский | english

НАШ ИНСТИТУТ

Первый Ташкентский Государственный Медицинский Институт был создан в 1918 году и на сегодняшний день является одним из ведущих ВУЗов республики Узбекистан, а также одним из крупнейших научно-исследовательских центров. На факультетах нашего института обучается около 3000 студентов по программе врачей общей практики, 200 клинических ординаторов (программа магистратуры) более 100 аспирантов и докторантов. Институт занимается подготовкой специалистов лечебного дела и стоматологов. В институте работают ведущие специалисты по хирургии, терапии, акушерству и гинекологии, реанимации, интенсивной терапии и анестезиологии, стоматологии, а также специалисты по биохимии, фармакологии, морфологии и другим медико-биологическим дисциплинам, которые помимо преподавательской работы занимаются научно-исследовательской деятельностью.
