The VMware community has spoken: Veeam offers the best free vSphere tools. In the latest [Best Free vSphere Tools Survey](#) three of Veeam's free vSphere tools took the top three spots!

The top 3 vSphere Tools of 2010 include:

1. Veeam FastSCP

Veeam FastSCP helps you manage files and bulk copy VMs across your virtualized environment. Updated for vSphere 4.1, Veeam FastSCP is fast, secure and easy to use. It can copy files over 6 times faster than other SCP tools and uses a single console for multiple Windows, Linux, ESX and ESXi server file management.

Download Veeam FastSCP for free [here](#).

NEW 5.0

2. Veeam Monitor Free Edition

Veeam Monitor Free Edition helps you consolidate monitoring across vCenter servers, hosts and users. The free edition of Veeam Monitor is easy to install and maintaining and provides you with a comprehensive view of your entire virtual infrastructure .

Download Veeam Monitor Free Edition [here](#).

3. Veeam Reporter Free Edition

Veeam Reporter Free Edition helps you document and report on your VMware virtual infrastructure. With Veeam Reporter you get enterprise reporting, change management and capacity planning with no limits on the number of hosts, VMs or users.

Download Veeam Reporter Free Edition [here](#).

Тесты?

Windows Error Recovery

Windows failed to start. A recent hardware or software change might be the cause.

If Windows files have been damaged or configured incorrectly, Startup Repair can help diagnose and fix the problem. If power was interrupted during startup, choose Start Windows Normally. (Use the arrow keys to highlight your choice.)

Launch Startup Repair (recommended)

Start Windows Normally

Seconds until the highlighted choice will be selected automatically: 2
Description: Fix problems that are preventing Windows from starting

The screenshot displays the Veeam Backup & Replication console. At the top, there is a navigation bar with buttons for 'Last 24 hours', 'Last 7 days', 'Reports', 'Jobs', 'VMs', 'Files', and 'Lab Requests'. Below this, a 'VM name:' field is visible. The main area shows a search interface with 'Search' and 'Browse' buttons. A dropdown menu shows '[TBD] Backup file information: 8/10/2010 07:02:00 pm'. To the right, there is a 'Browse' button and a link '[TBD] Backup file information'. A 'Quick search:' field is also present. Below the search bar, a file explorer view shows the contents of the C:\ drive, including folders like '081de98d524d05d287', 'acd903abfabd2ae59477be54c7', 'Documents and Settings', 'Inetpub', 'Program Files', 'rep', 'sysprep', 'System Volume Information', and 'WINDOWS'. A table with columns 'Name', 'Date Modified', and 'Size' is partially visible on the right side of the file explorer.

	DPM failed to bring host from a standby mode	Predefined
	Host failed to exit standby mode	Predefined
	vCenter lost connection to host	Predefined
	Host connection failure	Predefined
	Host CPU usage	Predefined
	Host available memory	Predefined
	Host memory pressure	Predefined
	Host swap memory	Predefined
	Host disk SCSI aborts	Predefined

Knowledge Assignment

Alarm details

Summary

This event records that Distributed Power Management tried to bring a host out from standby mode but failed to exit standby mode.

Standby Mode powers off an ESX server and allows it to be powered back on again. This is triggered either manually or automatically by VirtualCenter.

Cause

There may be some issue with Wake-on-LAN (or the specific technology applicable to your hardware). Check the host network and hardware status.

Note - Do not disconnect a host in standby mode or move it out of the DRS cluster. Otherwise vCenter Server is not able to power the host back on.

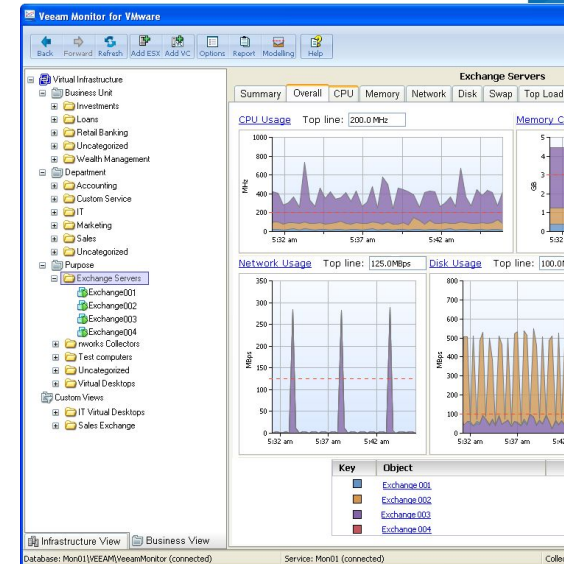

Resolution

You should respond by powering the host on using a different method and then disconnecting it from the network until you have resolved the issue.

Мониторинг VMware в промышленных системах

The screenshot displays the nworks System Center Operations Manager 2007 interface. The main window shows a 'Monitoring' view with a 'Cluster State' table and a 'Diagram View' of hardware sensors. The 'Cluster State' table has the following data:

State	Maintenanc...	Name	VMware ESX Server	VMPOOL Resource Pool	vmActive	vmShutdown	vmSuspended	vmTotal
warning		3 Cluster	warning	Critical	49	28	0	77

The 'Diagram View' shows a hierarchy of sensors: FAN, HARDWARE, OTHER, POWER, Current 1 for Power Supply..., Current 2 for Power Supply..., and Power Supply 1: Running/Full Power-Enabled. The 'Alert Properties' window for 'nworks VMware: ESX Cluster Memory Pressure has exceeded threshold' shows the following details:

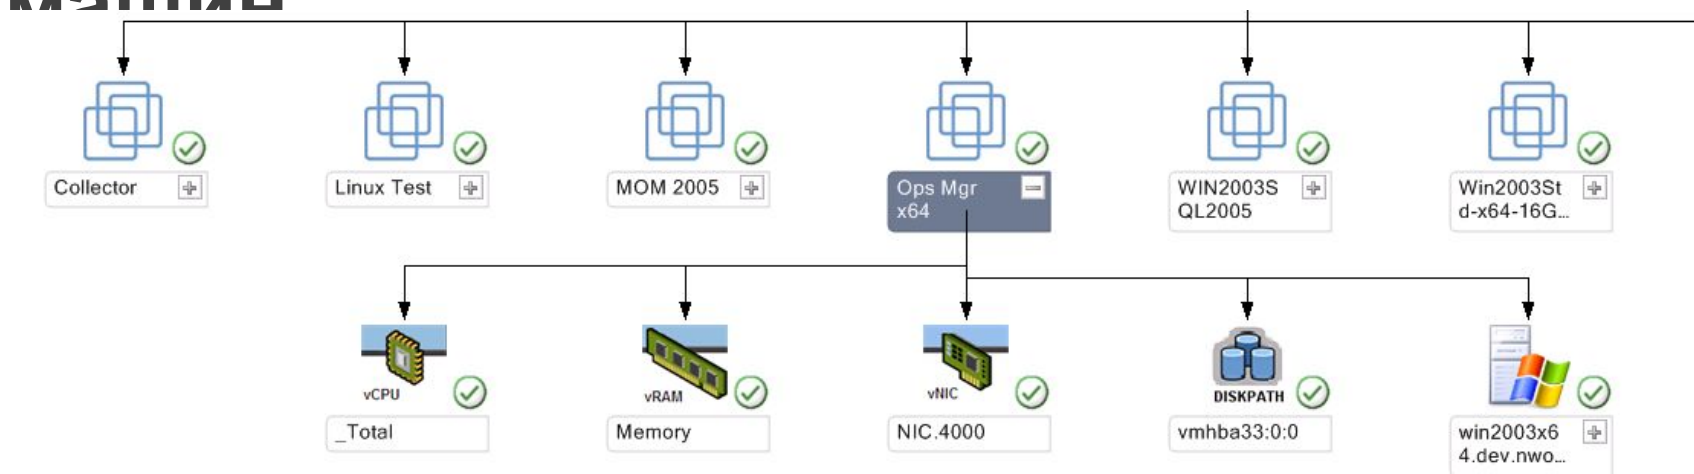

- Alert source:** 3 Cluster
- Alert severity:** Warning
- Alert age:** 2 Days, 2 Hours, 39 Minutes
- Alert Description:** 3 Cluster has exceeded threshold for Memory Pressure with a value of 75%.
- Alert Status:** New

The 'Alert Properties' window also includes a 'Summary' section stating: 'This ESX Cluster has exceeded the threshold for memoryPressure' and a 'Causes' section explaining that the metric shows memory overcommitment. It also provides 'Resolutions' and 'External Knowledge Sources' for further information.
