- теоретическая механика и динамика
- новейшие инженерные технологии

CSA Technology Research Database

CSA Technology Research Database

CINDAS Materials Properties Databases

- Contains data on thermal, mechanical, electrical and physical properties of electronics packaging materials (solid-state technology).
- Provides properties of over 750 materials and contains over 15,000 data curves. It was developed under the sponsorship of the Semiconductor Research Corporation (SRC).
- The results of the multi-million dollar research program were originally available only to SRC members. Now they are available to engineers and scientists worldwide.
- The database is updated and expanded on a regular basis (at least twice a year).

MPMD (data version 5.0)

Property Group: Thermophysical Properties

Property: Thermal Expansion

Independent Variable: Temperature

[Edit Selection](#)

Show Text

Step 1. Select Materials

Select one or more materials from the list below. Hold the control key to select multiple materials. Available data curves will be displayed on the right. Then proceed to Step 2.

- Material 1: Ag + Pd Alloy (70/30)
- Material 2: Al(2)Au Intermetallic
- Material 3: AlAu(2) Intermetallic
- Material 4: Alloy 42, Carpenter Glass Sealing
- Material 5: Alumina, Al(2)O(3)

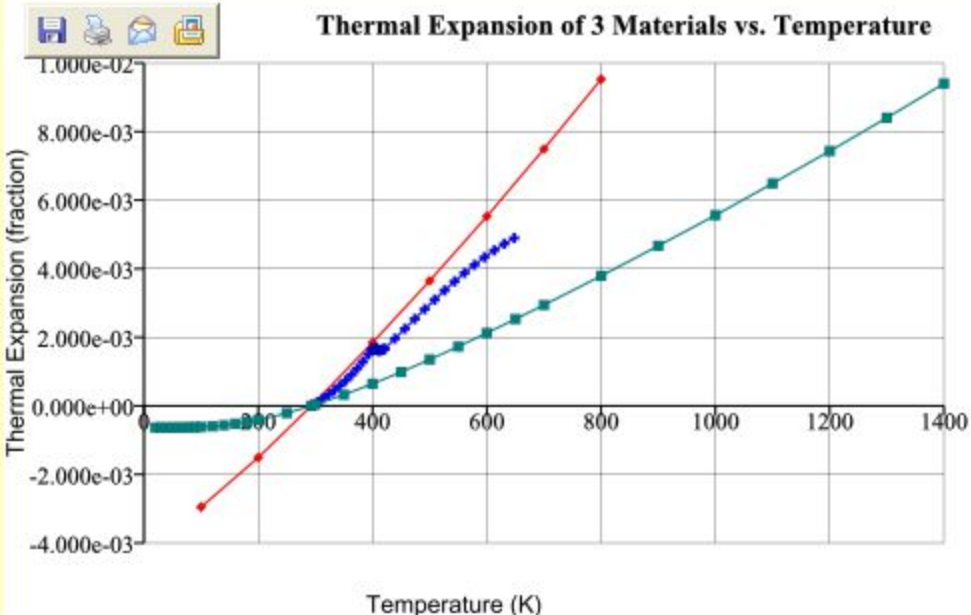

(Listing 89 materials)

Step 2. Select Data Curves/Test Conditions

Select between one and twenty data curve descriptions from the list below to view graphs. Hold the Control key to select multiple data curves.

Key: Selected Material: (Set, Curve) - Remarks

- 1. Material 1 (1, 1) - Unknown
- 2. Material 3 (1, 1) - Unknown
- 3. Material 5 (1, 1) - Polycrystalline

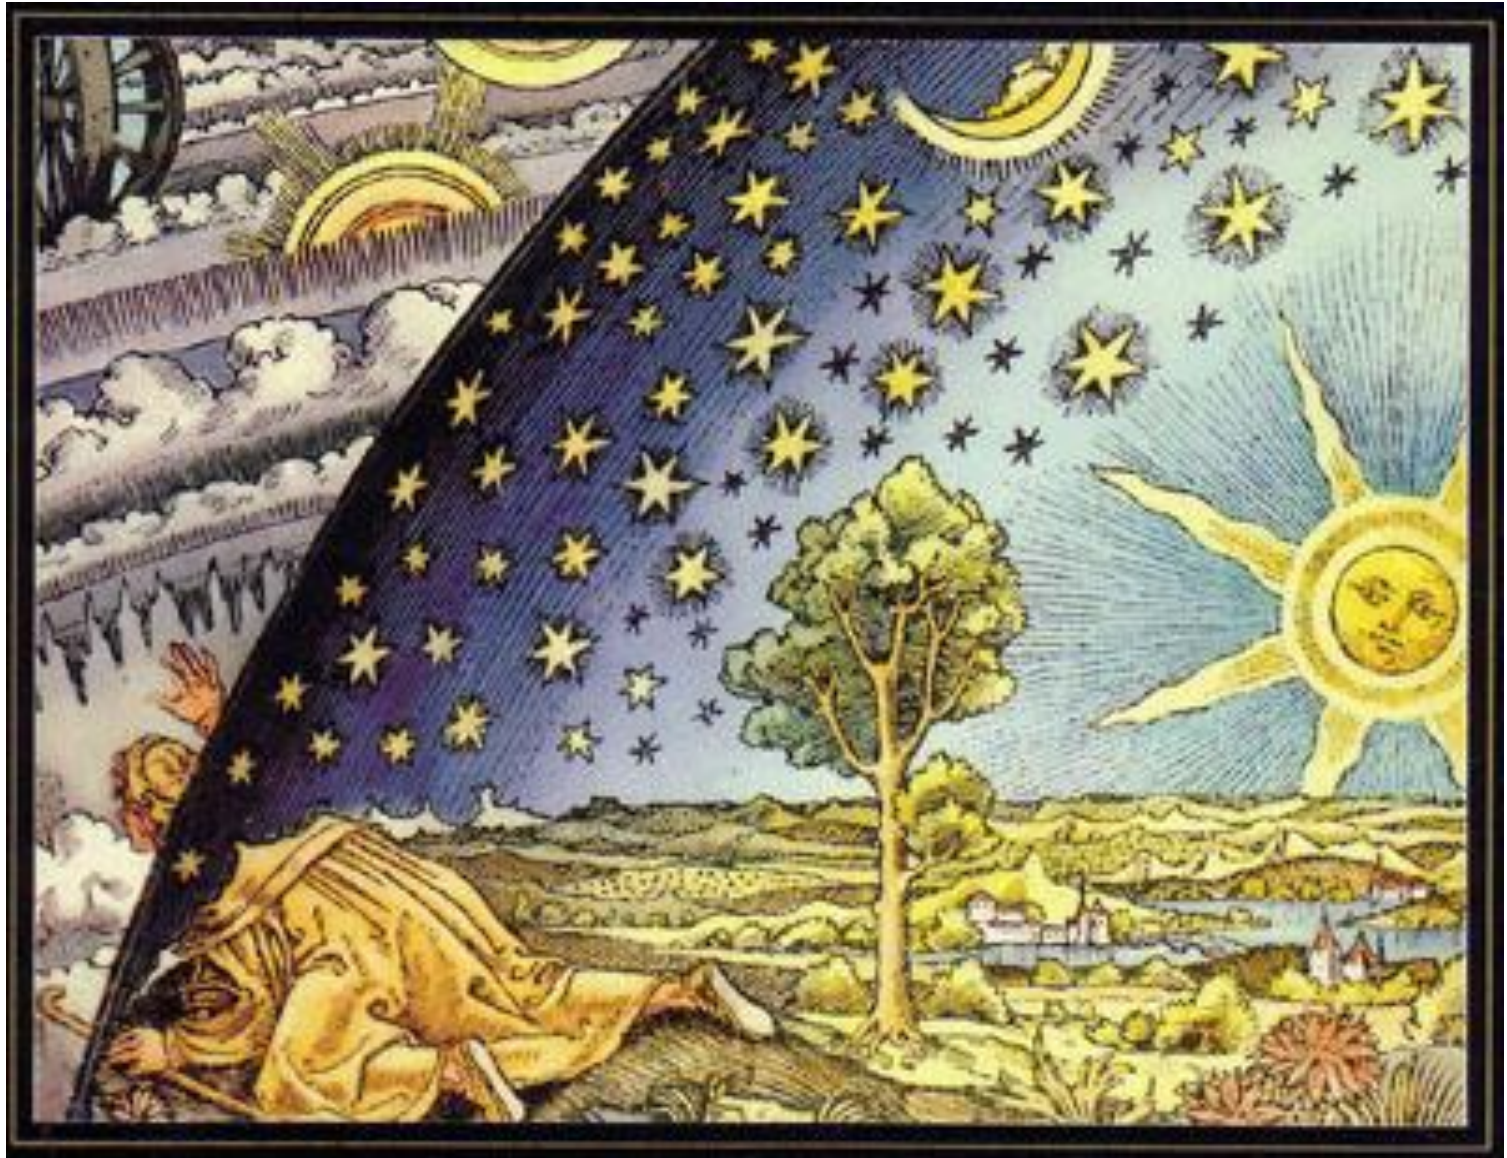

- 1. Material 1 (1, 1)
- 2. Material 3 (1, 1)
- 3. Material 5 (1, 1)

2 MAIN ENVIRONMENTAL PROBLEMS AND ISSUES IN THE CITY OF ST. PETERSBURG

The city of St. Petersburg is Russia's second important economic, scientific and cultural centre and an important marine port. The city has a federal status (similar to a Region (Oblast)) and is located on the banks of the river Neva in the eastern end of the Gulf of Finland of the Baltic Sea. It has a population of about 4,5 mill. people (5 mill. including the suburban administrative territories) and it covers a territory of about 607 km², or 1.400 km² with suburban territories. The city is divided into 17 districts. In addition, seven towns are administratively subordinate to the city administration: Zelenogorsk, Kolpino, Kronstadt, Lomonosov, Pavlovsk, Petrodvorets, Pushkin, and Sestroretsk.

As each big city in Russia, also St. Petersburg faces severe environmental problems. Heavy pollution threatens the condition of nature areas, public health as well as deteriorates the infrastructure and historical monuments. The main sources and impacts of pollution are discussed in the following chapters.

2.1 Air Pollution

Air pollution has been identified by the city authorities as the main environmental problem in St. Petersburg. It endangers public health and contributes to the deterioration of nature
