ISI Web of KNOWLEDGE
Transforming Research

Как проводится оценка результатов научной деятельности?

- Примеры методов:
  - Количество и объём грантов
  - Количество наград (например, Нобелевских премий)
  - Количество патентов
  - Peer evaluation
  - **Подсчёт публикационной активности**
  - **Подсчёт количества цитирования**
  - **Библиометрические показатели, нормализованные по предметным областям**

- Peer Evaluation
  - Дорого, не лишено субъективности, существенные временные затраты

ISI WEB OF KNOWLEDGE И ISI *WEB OF SCIENCE*

ISI Web of Knowledge

- 20 миллионов индивидуальных пользователей
- 150,000 пользователей каждый день
- > 3,500 институций
- > 23,000 журналов
- > 90 миллионов записей

ISI Web of Knowledge: основная платформа для научных исследований

Платформа включает в себя:

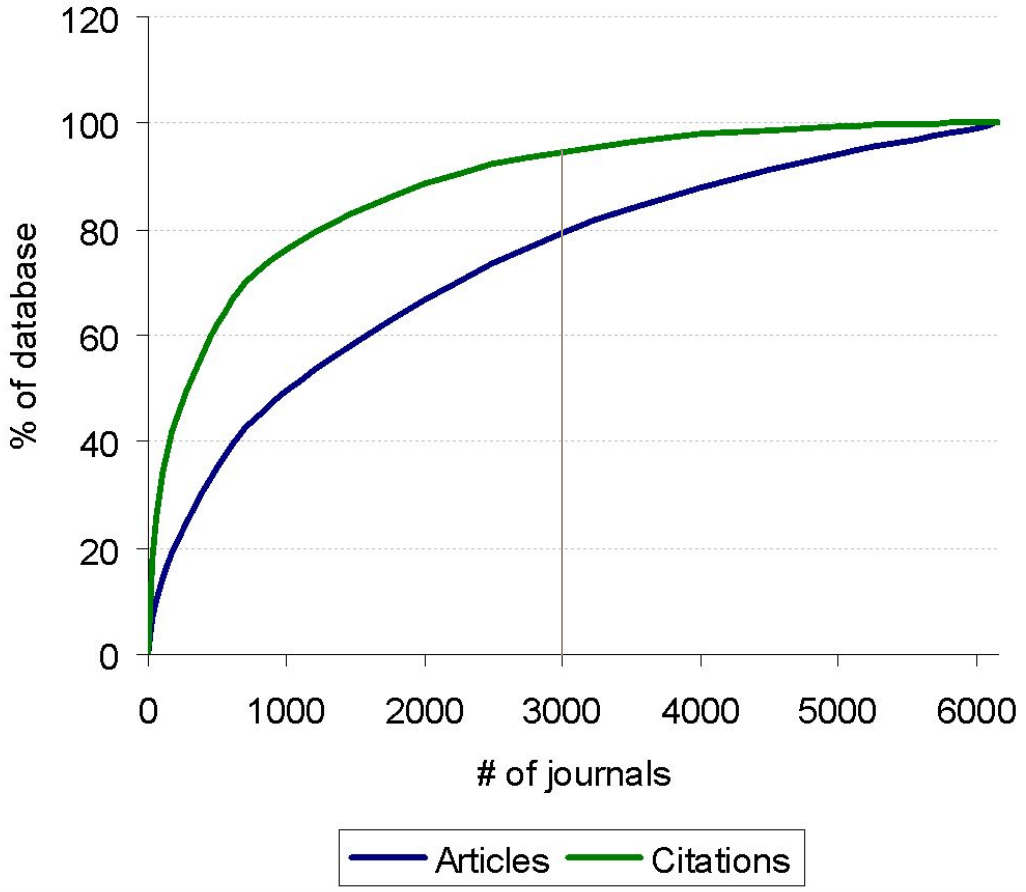
5000+ Украинских Публикаций
ежегодно в Web of Science

Политика отбора журналов в Web of Science

- Для чего мы отбираем журналы?

Относительно небольшая группа журналов публикует абсолютное большинство *значимых научных результатов*



Всего 3000 журналов покрывает 80% статей…

…но, что ещё более важно – 92% того, что цитируется

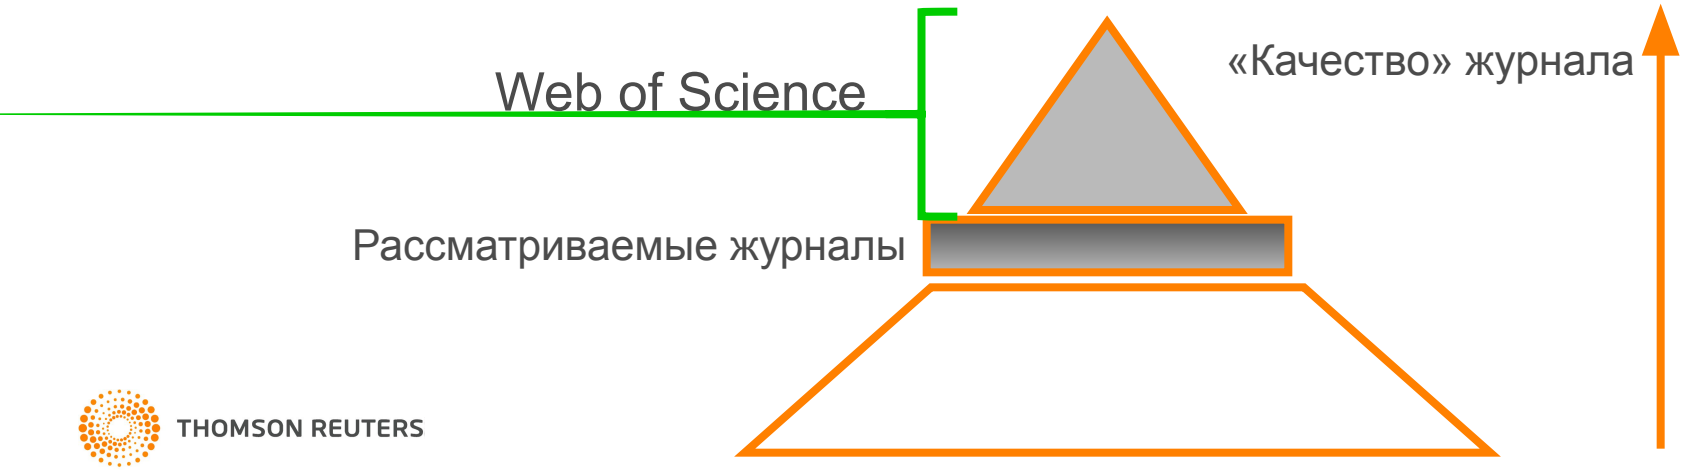
В 7,621 журнале опубликовано 814,967 статей, получивших 20,834,641 ссылок

4% журналов (300) публикуют **30% статей** (239,206)

4% журналов (300) получают **51% ссылок** (10,681,596)

Политика отбора журналов в Web of Science

- Ежегодно рассматривается ~2000 журналов
  - 10-12% принимается
- Эксперты Thomson Reuters
  - Профессионалы информационного бизнеса
  - Библиотекари
  - Эксперты в конкретной предметной области



ПРОЦЕСС ОТБОРА ЖУРНАЛОВ В THOMSON REUTERS

- ОДНАКО ПОНЯТИЕ «ОБШИРНЫЙ» НЕ ЗНАЧИТ «ВСЕОБЪЕМЛЮЩИЙ».
- ЗАЧЕМ НУЖЕН ОТБОР?
- Процесс оценки:
  - Базовые стандарты для журналов: своевременность издания журнала, соблюдение журналом международной издательской конвенции
  - международный состав авторов
  - Анализ цитирования
  - Содержание журнала

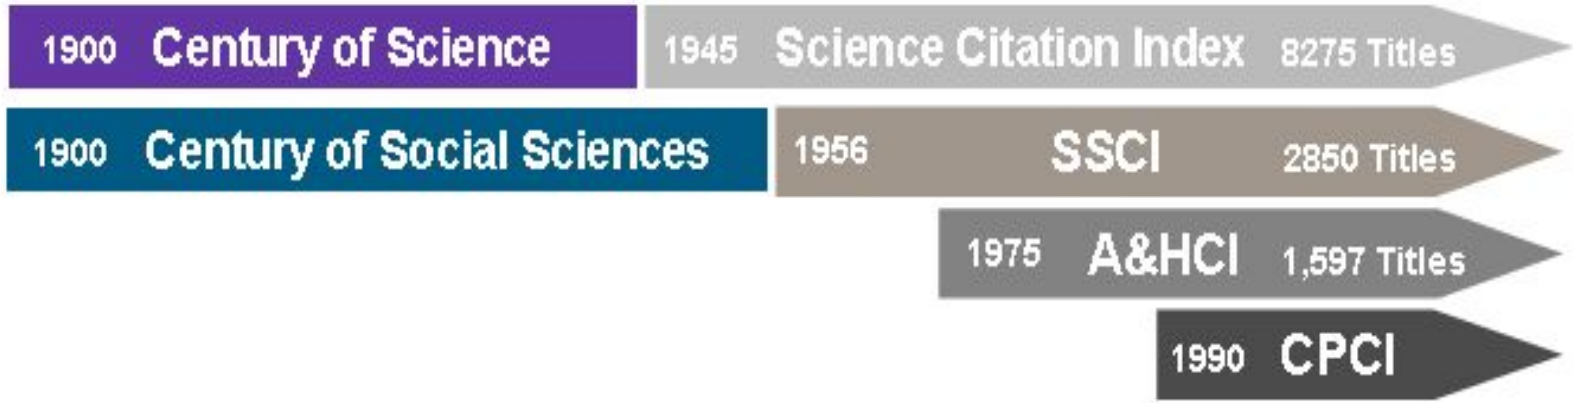
ИЗДАТЕЛЬСКИЕ СТАНДАРТЫ—ЧЕТЫРЕ ОСНОВНЫХ ЭЛЕМЕНТА

- Своевременность публикации *
- Международные издамельские законы
- Полный текст или библиографическая информация на английском языке
- Экспертная оценка (peer review)

Для чего нужен Web of Science?

- Тематическое информирование
- Справочно-библиографическое обслуживание
- Формирование собственных баз данных
- Поисковый интерфейс для пользователей любого уровня (ученые, аспиранты, студенты)
- Аналитические инструменты - библиометрические исследования

Журналы В Web Of Science



- 11, 927 журналов по всем научным областям в 250 отдельных категориях (04.2011)
- Более 12 000 конференций ежегодно (120 000 уже в индексе)
- 46 миллионов уникальных записей (самая большая база цитат)
- данны высокого качества и надёжности

Некоторые организации, использующие наши данные для оценки

- США: National Institutes of Health
- США: National Science Foundation (с 1974)
- Великобритяния: Office of Science & Technology; Higher Education Funding Council

Transport of Dirac quasiparticles in graphene: Hall and optical conductivities

Full Text | Holdings | Go | Print | E-mail | Add to Marked List | Save to EndNote Web | Save to EndNote, RefMan, ProCite | more options

Author(s): Gusynin VP (Gusynin, V. P.), Sharapov SG (Sharapov, S. G.)

Abstract: The analytical expressions for both diagonal and off-diagonal ac and dc conductivities of graphene placed in an external magnetic field are derived. These conductivities exhibit rather unusual behavior as functions of frequency, chemical potential, and applied field which is caused by the fact that the quasiparticle excitations in graphene are Dirac-like. One of the most striking effects observed in graphene is the odd integer quantum Hall effect. We argue that it is caused by the anomalous properties of the Dirac quasiparticles from the lowest Landau level. Other quantities such as Hall angle and Nernst signal also exhibit rather unusual behavior, in particular when there is an excitonic gap in the spectrum of the Dirac quasiparticle excitations.

Несколько слов об InCites

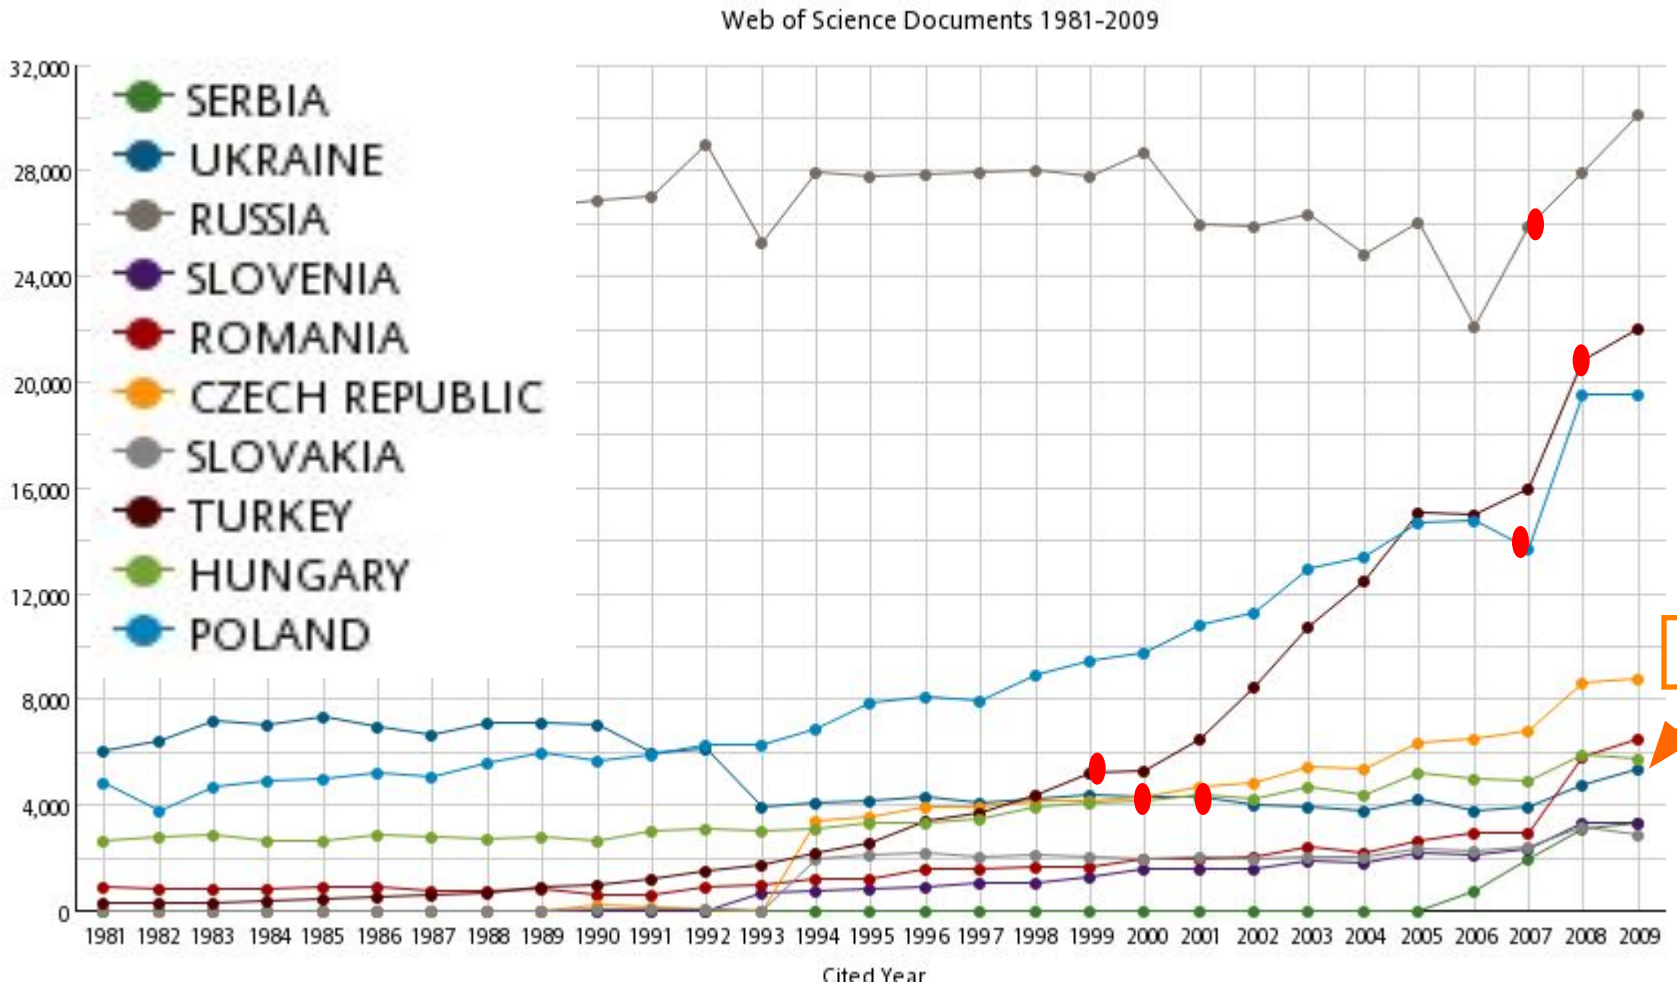
Для чего мы сделали инструмент InCites?

- Web of Science – база в первую очередь для тематического информирования учёных. Она идеально подходит для поиска наиболее цитируемых работ по интересующей проблеме, оценки журналов и потенциальных научных связей;
- Поскольку в Web of Science используется для поиска информации, работа с базой невозможна без введения поискового запроса. Который может быть достаточно комплексным;
- Для научного руководства предпочтителен специальный инструмент, предоставляющий необходимые данные без существенных затрат времени и сложных поисков;
- Потребность в неком эталоне для сравнения показателей учёных и организаций

InCites – 2 части

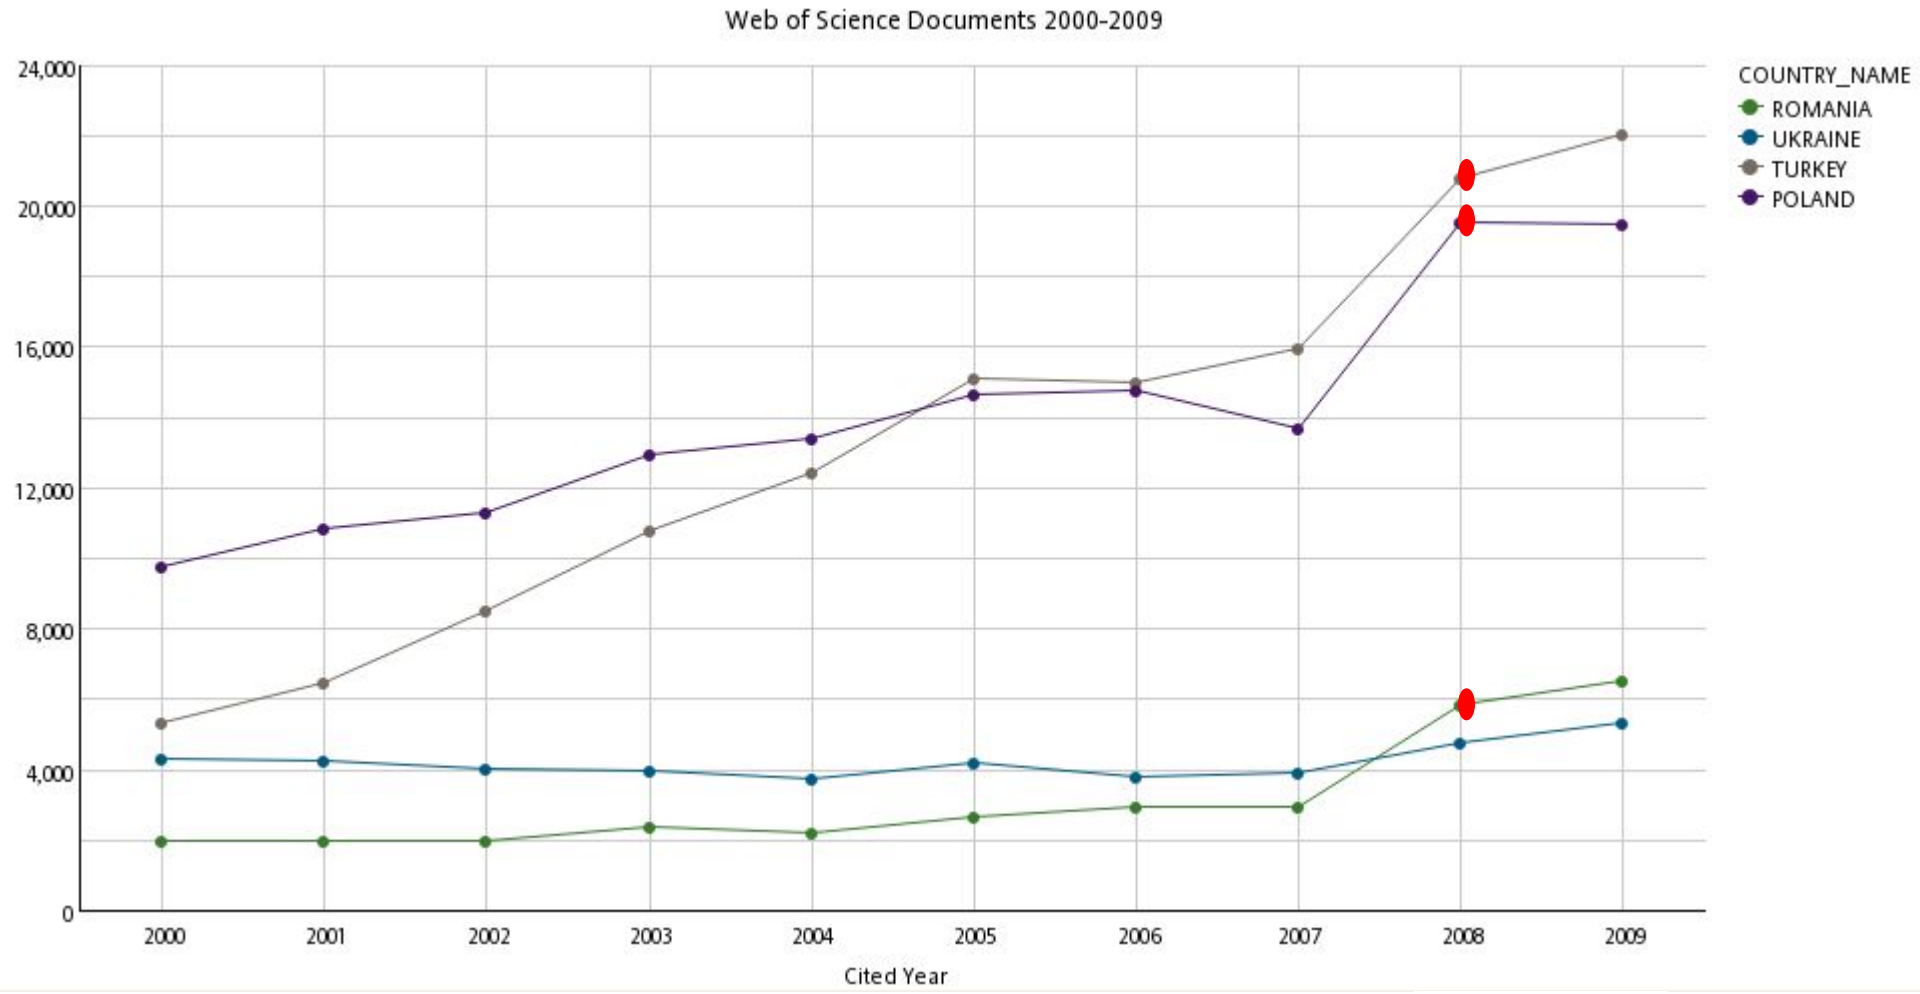
- **Global Comparisons**
  - Оценка научной деятельности страны по сравнению с остальным миром
  - Сопоставление показателей в разбивке по странам и/или предметным областям

Научная производительность в нашем регионе (1981-2009)

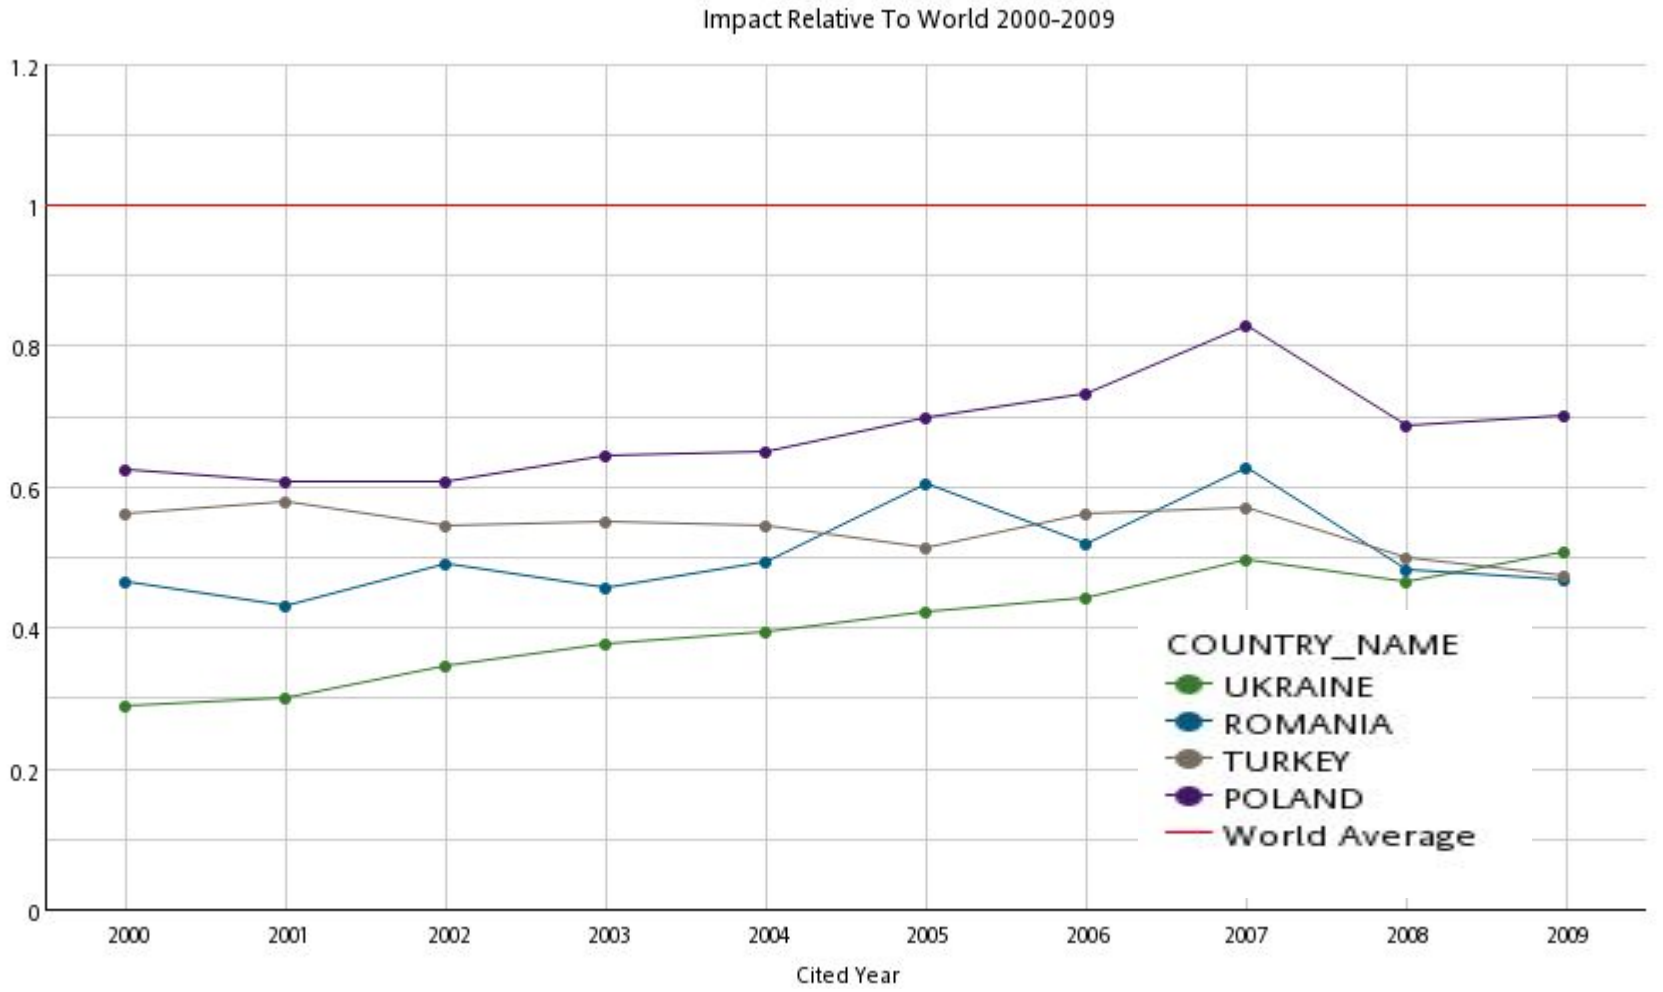


THOMSON REUTERS

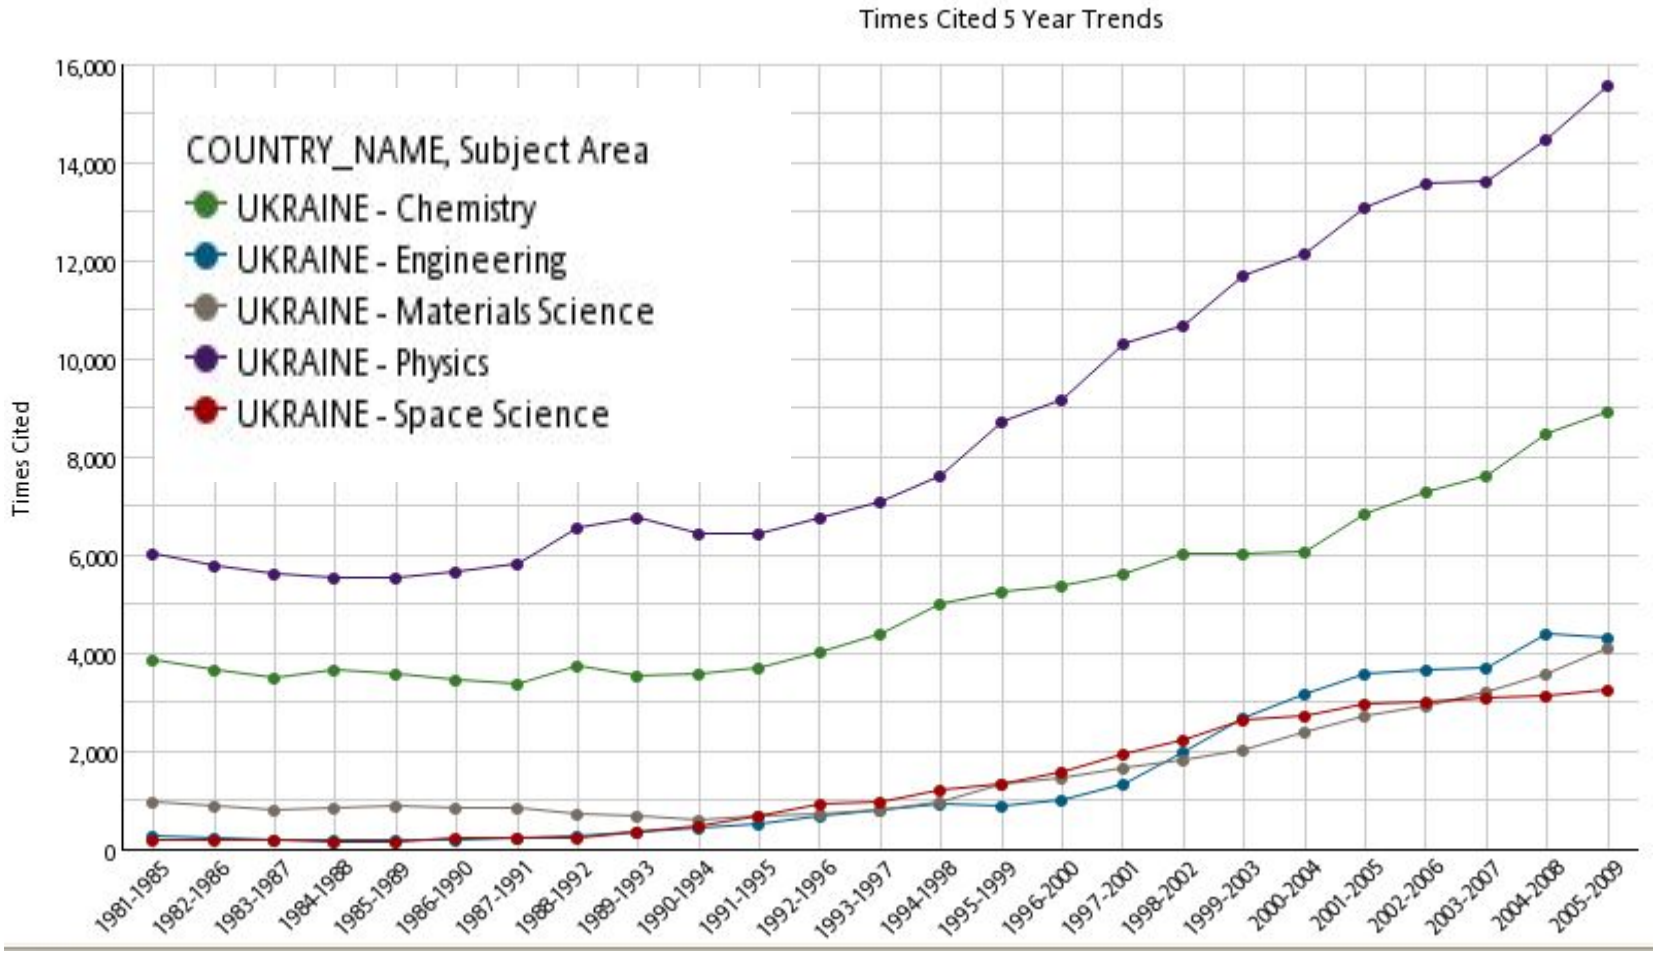
Научная производительность в нашем регионе: Польша, Украина, Турция, Румыния (2000-2009)



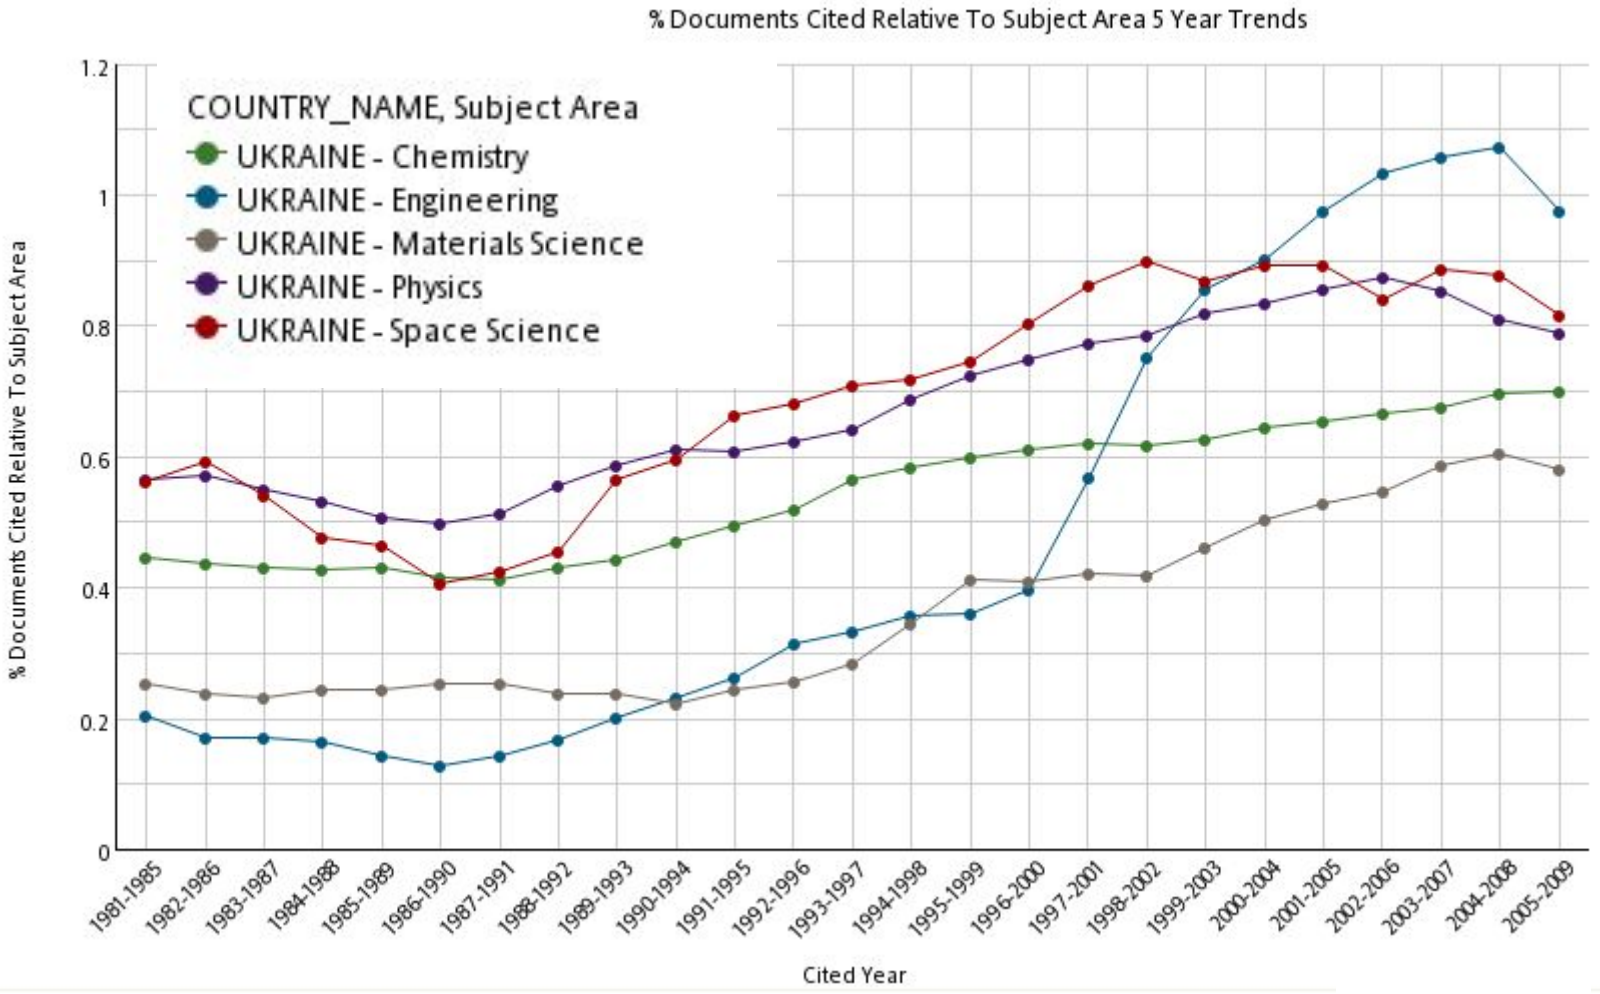
Сравнение влияния Польши, Украины, Турции, Румынии (2000-2009)



Цитирования k Основным Областям Украинской Науки



Сравнение с мировыми средними



InCites™

InCites – 2 части

- **Research Performance Profiles**
  - Сравнение между факультетами или лабораториями внутри института
  - Анализ по статьям, автору, отделу. Анализ совместных исследовательских проектов

Абсолютные и относительные показатели

- Если генетики получили в сумме 5000 ссылок – как обстоят дела с генетикой в институте?

Или

- Если статья была процитирована 20 раз – это хорошая статья?

Abstract: There has recently been growing evidence for the existence of neutron stars possessing magnetic fields with strengths that exceed the quantu field strength of 4.4 x 10(13) G, at which the cyclotron energy equals the electron rest mass. Such evidence has been provided by new discoveries of rad having very high spin-down rates and by observations of bursting gamma-ray sources termed magnetars. This paper will discuss the exotic physics of t field regime, where a new array of processes becomes possible and even dominant and where familiar processes acquire unusual properties. We revi physical processes that are important in neutron star interiors and magnetospheres, including the behaviour of free particles, atoms, molecules, plasm condensed matter in strong magnetic fields, photon propagation in magnetized plasmas, free particle radiative processes, the physics of neutron star in field evolution and decay mechanisms. Application of such processes in astrophysical source models, including rotation-powered pulsars, soft gamma repeaters, anomalous x-ray pulsars and accreting x-ray pulsars will also be discussed. Throughout this review, we will highlight the observational signa high magnetic field processes, as well as the theoretical issues that remain to be understood.

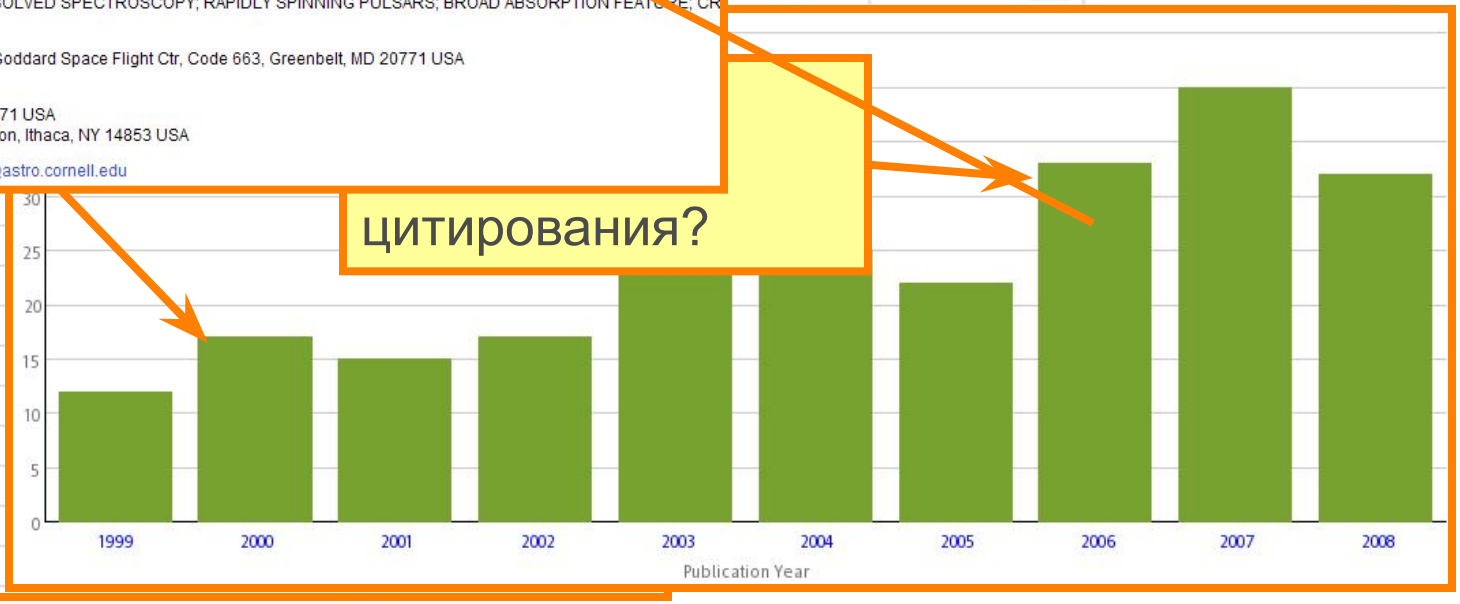
цитирования?



В заключение

- Анализ, основанный на данных из авторитетной базы Web of Science
- Возможность для руководства детально анализировать состояние науки внутри организации и отслеживать основные тренды в мировой науке
- Данные ещё раз выверяются – не нужно заниматься поиском
- Нормализованные показатели позволяют сравнивать учёных, работающих даже в различных предметных областях

2 направления применения показателей научного цитирования

- Практика проведения исследований
  - Что уже было написано по исследуемой мной проблеме?
  - Кто из исследователей этой проблемы наиболее авторитетен?
  - Где мне опубликовать мою статью?
  - и т.д.
- Управление научной деятельностью
  - Чего мы добились как исследовательская организация?
  - В каких предметных областях мы наиболее успешны?
  - Какие из наших учёных наиболее активны/ авторитетны/ эффективны?
  - Как мы показываем себя в сравнении с нашими партнёрами или конкурентами?
  - Какие из международных научных связей нам следует развивать в первую очередь?
  - И т.д.
