

Web of Science на платформе ISI Web of Knowledge: современный взгляд на исследования

Павел Касьянов,
Региональный представитель

Концепция индекса цитирования

- Концепция впервые предложена Ю. Гарфилдом
 - *Science*, 1955
- *The Science Citation Index* (1963)
 - Печатный SCI (1960-е)
 - Поиск в сети - SciSearch в 1970
 - На компакт-дисках 1980х
 - Веб-интерфейс (1997) *Web of Science*
- Расширяющийся контент:
 - Social Sciences Citation Index (SSCI)
 - Arts & Humanities Citation Index (АHCI)
- Индекс цитирования
 - Изначально применялся для получения научной информации
 - Развитие электронных средств связи и хранения информации привели к возможности использовать эти данные для оценки результатов исследований

Web of Science и Web of Knowledge

Web of Knowledge

- Платформа, на которой доступны различные базы данных, в т.ч., Web of Science

Web of Science

- База данных по научным публикациям
- Основная цель – создание политематической коллекции наиболее значимых международных и региональных журналов **для всех категорий пользователей.**
- Процесс отбора журналов осуществляется ежедневно квалифицированными специалистами в области информационного обеспечения и исследователями.

Для чего нужен Web of Science?

- Тематическое информирование
- Справочно-библиографическое обслуживание
- Формирование собственных баз данных
- Поисковый интерфейс для пользователей любого уровня (ученые, аспиранты, студенты)
- Аналитические инструменты - библиометрические исследования

Web of Science в РАСХН

Доступ предоставляется с 12го января по 12е февраля:

- К индексу цитирования Web of Science по естественным, общественным и гуманитарным наукам с глубиной архива с 1975 года
- К индексу цитирования научных конференций по естественным, общественным и гуманитарным наукам с глубиной архива с 1990 года
- К базе данных по импакт-факторам журналов Journal Citation Reports за 2008й год

С чего начать

ISI Web of KnowledgeSM Take the next step

All Databases Select a Database Web of Science Additional Resources

Use the "All Databases" tab above to search all databases, or select a single database from the list below.

Web of Science[®] (1975-present)
Access the world's leading scholarly literature in the sciences, social sciences, arts, and humanities.

- Navigate with cited reference searching and Author Finder
- Use the Analyze Tool to identify trends and patterns
- Backfiles available to 1900

Your edition(s):

- Science Citation Index Expanded (1975-present)
- Social Sciences Citation Index (1975-present)
- Arts & Humanities Citation Index (1975-present)
- Current Chemical Reactions (1986-present)
- Index Chemicus (1993-present)

Current Contents Connect[®] (1998-present)
Complete tables of contents and bibliographic information from the world's leading scholarly journals and books; also includes relevant, evaluated Web sites and documents.

- Access pre-published electronic journal articles
- Search more than articles with cover-to-cover indexing

Your edition(s):

- Agriculture, Biology & Environmental Sciences (1998-present)
- Social & Behavioral Sciences (1998-present)
- Clinical Medicine (1998-present)
- Life Sciences (1998-present)
- Physical, Chemical & Earth Sciences (1998-present)
- Engineering, Computing & Technology (1998-present)
- Arts & Humanities (1998-present)
- Business Collection (1998-present)
- Electronics & Telecommunications Collection (1998-present)

ISI ProceedingsSM (1990-present)
Examine proceedings of international conferences, symposia, seminars, colloquia, workshops, and conventions.

- About 70% of information is not available in scientific journals
- Access enhanced coverage of books and meeting abstracts

Your edition(s):

- Science & Technology (1990-present)

CAB Abstracts[®] (1973-present)
Provides authoritative research information on agriculture, environment and all related applied science disciplines.

- Use CAB Thesaurus, CABICODS and CAB Registry Numbers.
- Explore data from journals, books, proceedings, monographs, technical reports, and more
- Backfiles available to 1910

Food Science and Technology AbstractsTM (1969-present)
Provides thorough coverage of pure and applied research in food science, food technology, and food-related nutrition.

- Explore the complete food manufacturing and packaging market research to final packaging
- Access food-related literature from journals, reports, theses, patents, standards, and more
- Backfiles available to 1969

Inspec[®] (1969-present)
A comprehensive index to the global journal literature in physics, electrical/electronic engineering, and information technology.

- Includes Inspec Thesaurus, Classification, and specialized search aids
- Backfiles available to 1898

MEDLINE[®] (1950-present)
The U.S. National Library of Medicine[®] (NLM) database.

- Explore biomedicine and life sciences, health, clinical care, and plant and animal health
- Search precisely with MeSH terms and link to NCBI databases and PubMed Reference Service
- Backfiles to 1950

Zoological Record[®] (1978-present)
The world's leading taxonomic reference and oldest continuing database of animal biology.

More information for new users TRIAL

Why select only one database?

Язык поисковых запросов

- Только английский
- Операторы AND, OR, SAME, NOT
- Знаки усечения:
 - ? (один любой символ)
 - * (любое количество символов)
 - \$ (любой 1 или 0 символов)

Логические операторы – AND, OR

Оператор AND:

Запрос **plant AND growth**

- Выдаст статьи, содержащие оба слова - и слово **plant**, и слово **growth**

Оператор OR:

Запрос **mouse OR mice**

- Выдаст статьи, содержащие либо слово **mouse**, либо слово **mice**.

Логические операторы – SAME, NOT

Оператор SAME:

Запрос **plant SAME growth**

- Выдаст статьи, содержащие оба слова - и слово **plant**, и слово **growth**, в одном абзаце

Оператор NOT:

Запрос **Russia NOT Moscow**

- Выдаст статьи, содержащие слово **Russia**, но не содержащие слова **Moscow**

Приоритет операторов

Если вы используете несколько операторов, то порядок их работы следующий:

1.SAME

2.NOT

3.AND

4.OR

Приоритет операторов

Это означает, что если запрос составлен следующим образом:

grain OR corn AND crops

- результатом будут все записи, в которых есть либо сочетание слов **corn** и **crops**, либо слово **grain**.

А если следующим:

(grain OR corn) AND crops

- результатом будут все записи, в которых слово **crops** присутствует либо в комбинации с **grain**, либо в комбинации с **corn**.

Примеры знаков усечения – Asterisk (*)

s*food заменяет запросы:

- seafood
- soyfood

Hof*man* заменяет
запросы:

- Hofman
- Hofmann
- Hoffman
- Hoffmann

enzym* заменяет запросы:

- enzyme
- enzymes
- enzymatic
- enzymic

Примеры знаков усечения – знак вопроса (?), знак доллара (\$)

wom?n заменяет запросы:

- woman
- women

Kas?anov заменяет запросы:

- Kasyanov
- Kasianov
- Kasjanov

colo\$r заменяет запросы:

- color
- colour

K\$uznetsov заменяет запросы:

- Kuznetsov
- Kouznetsov

Комбинации знаков усечения

organⁱ?ation* заменяет запросы:

- organisation
- organisations
- organisational
- organization
- organizations
- organizational

Abstract: An extensive programme of experiments on transfer of radionuclides to aquatic species was conducted in the former USSR starting from the early 1950s. Only a few of these studies were made available in the English language literature or taken into account in international reviews of radionuclide behaviour in marine ecosystems. Therefore, an overview of original information on radionuclide transfer to marine biota species available from Russian language literature sources is presented here. The concentration ratio (CR) values for many radionuclides and for marine species such as: Pu-239, Ru-106 and Zr-95 (crustacean), Mn-54, Sr-90, Nb-95, Ru-106, Cs-137 Pu-239, Am-241 and natural U (molluscs), and Mn-54, Sr-90, Cs-137 and Ce-144 (fish) are in good agreement with those previously published, whilst for some of them, in particular, for P-32 and Ag-110 (crustaceans), S-35 (molluscs), P-32, S-35, Nb-95, and Ru-106 (macroalgae) and Co-60 and Pu-239, Pu-240 (fish) the data presented here suggest that changes in the default CR reference values presented in recent marine reviews may be required. The data presented here are intended to supplement substantially the CR values being collated within the handbook on Wildlife Transfer Coefficients, coordinated under the IAEA EMRAS II programme.

Document Type: Review

Примерный алгоритм поиска по фамилии автора – Л.В. Келдыш

The screenshot shows the Web of Science search interface. At the top, there are navigation tabs: "All Databases", "Select a Database", "Web of Science", and "Additional Resources". Below these are search options: "Search", "Cited Reference Search", "Structure Search", "Advanced Search", "Search History", and "Marked List (0)". The main heading is "Web of Science® – with Conference Proceedings". The search area is labeled "Search for:" and contains a text input field with the query "keld*sh I*", a dropdown menu set to "Author", and a search button. Below the input field, there is an example: "Example: O'Brian C* OR OBrian C*" and a link: "Need help finding papers by an author? Use [Author Finder](#)."

1. Выбираем поле "Author"
2. В поле поиска вводим фамилию (при необходимости – с символами усечения), первую букву имени и звёздочку (*) в качестве первой буквы отчества

Примерный алгоритм поиска по адресу организации

Шаг 1 – подготовка набора данных

The screenshot shows the Web of Science search interface. At the top, there are tabs for 'All Databases', 'Select a Database', 'Web of Science', and 'Additional Resources'. Below these are search options: 'Search', 'Cited Reference Search', 'Structure Search', 'Advanced Search', 'Search History', and 'Marked List (0)'. The main section is titled 'Web of Science® – with Conference Proceedings'. Underneath, there is a 'Search for:' label and a search input field containing the query 'radio* same agr*'. To the right of the input field is a dropdown menu labeled 'in' with 'Address' selected. Below the input field, there is an example: 'Example: Yale Univ SAME hosp (view abbreviations list)'.

1. Выбираем поле “Address”
2. В поле поиска вводим наиболее релевантные слова из названия, желательно снабдив их символами усечения.

Какие слова использовать?

Проще всего обратить внимание на специфику деятельности организации:

Название	Оптимальный запрос
НИИ радиологии и агроэкологии	radio* same agr*
ВИЭСХ	agr* same electrif*
НИИ с/х биотехнологии	agr* same biotech*
НИИ риса	rice same inst*

Какие слова использовать?

Альтернативные варианты:

- Название города
- Почтовый индекс
- Транслитерация аббревиатуры

Алгоритм поиска по адресу организации

1,290 records. Address=(radio* same agr*)

Rank the records by this field:	Analyze:	Set display options:	Sort by:
<input type="button" value="Institution Name"/> Language Publication Year Source Title	Up to <input type="text" value="100000"/> Records.	Show the top <input type="text" value="500"/> Results. Minimum record count (Threshold): <input type="text" value="1"/>	<input checked="" type="radio"/> Record count <input type="radio"/> Selected field

Analyze

Use the checkboxes below to view the records. You can choose to view those selected records, or you can exclude them (and view the others)..

Note: The number of records displayed may be greater than the listed Record Count if the original set contained more records than the number of records analyzed.

<input type="button" value="View Records"/>	<input type="button" value="Exclude Records"/>	Field: Institution Name	Record Count	% of 1290	Bar Chart	<input type="button" value="Save Analysis Data to File"/>

Abstract: An extensive programme of experiments on transfer of radionuclides to aquatic species was conducted in the former USSR starting from the early 1950s. Only a few of these studies were made available in the English language literature or taken into account in international reviews of radionuclide behaviour in marine ecosystems. Therefore, an overview of original information on radionuclide transfer to marine biota species available from Russian language literature sources is presented here. The concentration ratio (CR) values for many radionuclides and for marine species such as: Pu-239, Ru-106 and Zr-95 (crustacean), Mn-54, Sr-90, Nb-95, Ru-106, Cs-137 Pu-239, Am-241 and natural U (molluscs), and Mn-54, Sr-90, Cs-137 and Ce-144 (fish) are in good agreement with those previously published, whilst for some of them, in particular, for P-32 and Ag-110 (crustaceans), S-35 (molluscs), P-32, S-35, Nb-95, and Ru-106 (macroalgae) and Co-60 and Pu-239, Pu-240 (fish) the data presented here suggest that changes in the default CR reference values presented in recent marine reviews may be required. The data presented here are intended to supplement substantially the CR values being collated within the handbook on Wildlife Transfer Coefficients, coordinated under the IAEA EMRAS II programme.

Document Type: Review

ISI Web of KnowledgeSM Experience the new version with

All Databases | Select a Database | Web of Science | Additional Resources

Analytical Tools:

Journal Citation Reports®

Journal performance metrics offer a systematic, objective means to critically evaluate the world's leading journals

- Delivers quantifiable statistical information based on citation data
- Helps determine a publication's impact and influence in the global research community
- Includes journal and category data

Essential Science IndicatorsSM

In-depth analytical tool offering data for ranking scientists, institutions, countries, and journals.

- Explore science performance statistics and science trends data, based on journal article publication counts and citation data
- Determine research output and impact in specific fields of research
- Evaluate potential employees, collaborators, reviewers, and peers

Web Search Tools:

Scientific WebPlus

Find scientifically relevant Web content fast! Search the open Web and quickly see the most relevant content for the topics you care about, with *Scientific WebPlus*.

Web Sites:

ISI HighlyCited.comSM

This free, expert gateway uses citation data to deliver comprehensive information about the most significant scientists and scholars publishing today.

BiologyBrowser

A free database of resources and links for the life sciences information community.

Index to Organism Names

The world's largest online database of scientific organism names.

ResearcherID.com

ResearcherID provides the global research community with an invaluable index to author information. Each author listed is assigned a unique number, which serves as a fast, easy identifier.

Science Watch®

Weekly tracking of hot or emerging papers and research fronts in this free Web resource for science metrics and analysis. Includes interviews, first-person essays, podcasts, and profiles from scientists, journals, institutions, and nations, selected using *Essential Science IndicatorsSM* from Thomson Reuters.
