

Relief of Kazakhstan

Plan:

- Lowlands (West-Siberian, Turan, Caspian)
- Plateau (Ustyurt, Turgay, Pre-Ural)
- Mountains (Altai, Saur-Tarbagatay, Tien-Shan)

The surface of the territory of the Kazakhstan is divided into 2 parts: large – *lowlands and plateau* (west, north and central KZ), small – *high mountains* (east and south-east). The surface *has a slope* from south-east to north-west.

The structure of a surface has the *large meaning* for *economic activity* of the population:

- 1) The lowlands, plains and intermountain valleys are most useful for *agriculture*.
- 2) The mountain slopes covered with rich vegetation are *perfect pastures for cattle*.

Western, northern and central part of the territory of Kazakhstan are occupied with 3 lowlands: West-Siberian, Turan and Caspian.

West-Siberian (North-Kazakhstan) lowland

The relief of the West-Siberian lowland is monotonous. Only in some places there are chains of small lakes. This lowland has a slope from the south to the north. In the south it is 200 m above the sea level, and in the north only 100.

Turan lowland

A landscape photograph of the Turan lowland. The foreground is dominated by a large, smooth sand dune with distinct ripples. In the middle ground, several green, bushy shrubs are scattered across the dunes. The background shows a flat, open plain extending to the horizon under a vast, dramatic sky filled with dark, heavy clouds and patches of lighter blue. The overall scene is arid and desolate.

Turan lowland is located in south and south-west of the republic. It raises in the south on 200 m. In north and the south of lowland it's broken with sand deserts.

Caspian lowland

The relief of Caspian lowland is monotonous. It consists of clay plains and sandy files. On the West from the river Ural there are sand-markets.

The territory of Kazakhstan is rich with plateaus. The biggest of them are: Ustyurt, Turgay, Pre-Ural.

Plateau Ustyurt

Plateau Ustyurt is between the Ural and Caspian seas. It's average height is 200 m above the sea level. It is combined from thickness clay, sandstone and limestone.

Turgay plateau

The image shows a vast, flat landscape of a plateau covered in tall, green grass. The horizon is low and straight, with a cloudy sky above. The grass is dense and appears to be blowing in the wind, creating a textured surface. The overall scene is a wide, open plain.

Turgay plateau is located to the east of Mugodzhary. Its average height above the sea level is 100 m. It connects with West-Siberian lowland.

Pre-Ural plateau

The image shows three prominent, tall, and jagged rock formations made of light-colored limestone or chalk. They stand on a grassy plateau under a clear blue sky. The formations are weathered and have a rough, textured surface. The ground is covered with sparse, dry grass and small shrubs. In the background, a small body of water is visible on the left side.

Pre-Ural plateau lays between the Caspian lowland and Mugodzhary. It's average height above the sea level is about 300 m. It consists of limestone, chalk and is watering by river Emba.

There are 3 mountain ranges on the territory of Kazakhstan: Tien-Shan, Altai, Saur-Tarbagatay.

Saur-Tarbagatay

A wide-angle landscape photograph of the Saur-Tarbagatay mountain range. The background shows several jagged, rocky mountain peaks with patches of snow. The middle ground is dominated by a dense forest of dark green coniferous trees. In the foreground, there are rolling green hills and a small cluster of buildings in a valley. The sky is a pale, hazy blue.

Saur-Tarbagatay is 2 mountain ranges together: Saur and Tarbagatay. It consists of clay, crystal schist, granite and limestone. It is located between Alakol basin in the north and river Orin in the south.

Altai

Altai is divided into 3 ranges: Southern, Central and Kolbinsky. There are glaciers and hollows, deposits of polymetal ores. Altai consists from gneisses, crystal schist, marble and limestone.

Tien-Shan

Tien-Shan mountains occupies the south-east of Kazakhstan. In the Central part of Tien-Shan is the highest point – Khan Tengri (6999 m).

THE END
