Personal Computer [PC]

My favorite gadget is a computer. I use it often. The computer is my assistant in different situations. Firstly, a computer is access to the Internet, I can use any information without leaving my room and without wasting time searching in other sources. Thanks to the computer, I can read any fairy tale, any story, watch any movie, listen to any song. I am a music lover and cannot live without music, PC music platforms like Spotify help me with this. When I'm bored, I play video games, there are a lot of them and they are suitable for anyone.

The first time I got acquainted with a computer was at a party, at about 6 years old. I was given a PC at the age of 7. Since then, he has helped me many times in my studies. Wrote reports, abstracts with the help of it. A year ago, I finished studying the basic knowledge of the Python programming language. I have accumulated a lot of experience in using a PC all the time.

The history of computers is short but very complicated. Computers have been through lot of changes throughout the past half-century. They also affect our society in many different ways today. The following paper describes how the computers have changed from 1970 to present. During 1970, Intel came out with a chip, which was the best selling semiconductor memory chip in the world.

It is customary to call the ancestor Charles Babbage, who was fond of computational sciences from a young age. Based on many years of work, he invented a mechanism capable of performing additions using the difference method. His design consisted of many bulky gears.
