

Brief: 56 m2 house visualisation

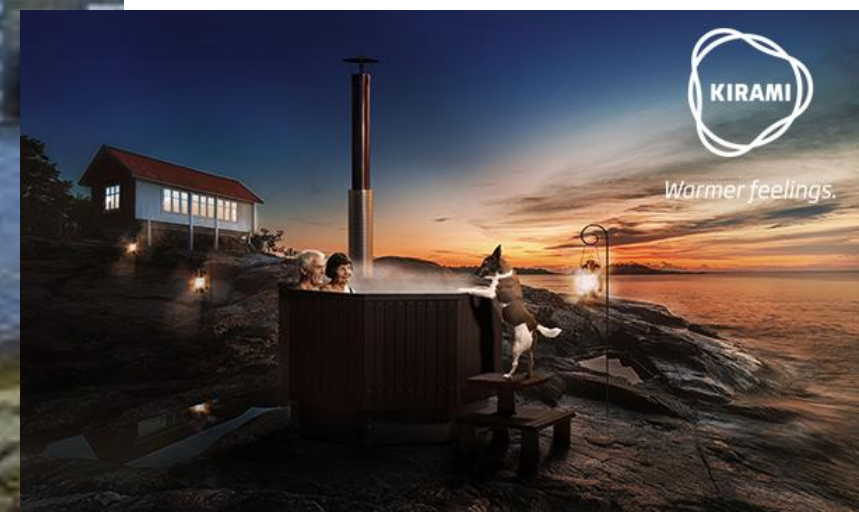

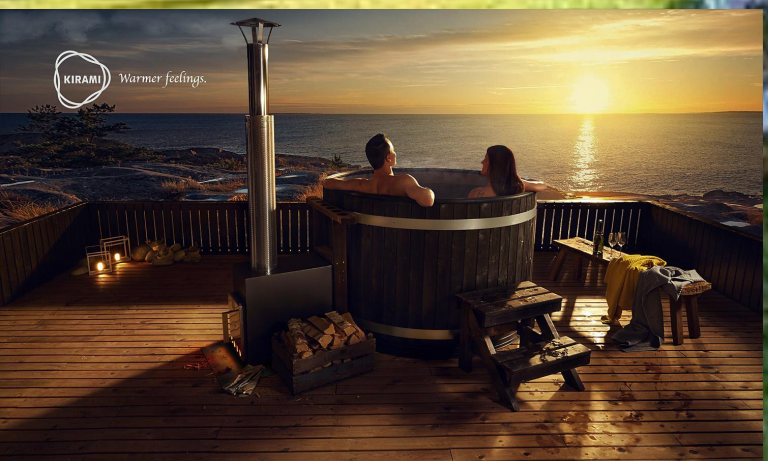

Main setting: Backyard view with a field view over large distance behind the house. Bushes mark the property border – large enough yard. Colors and materials as in this model house.

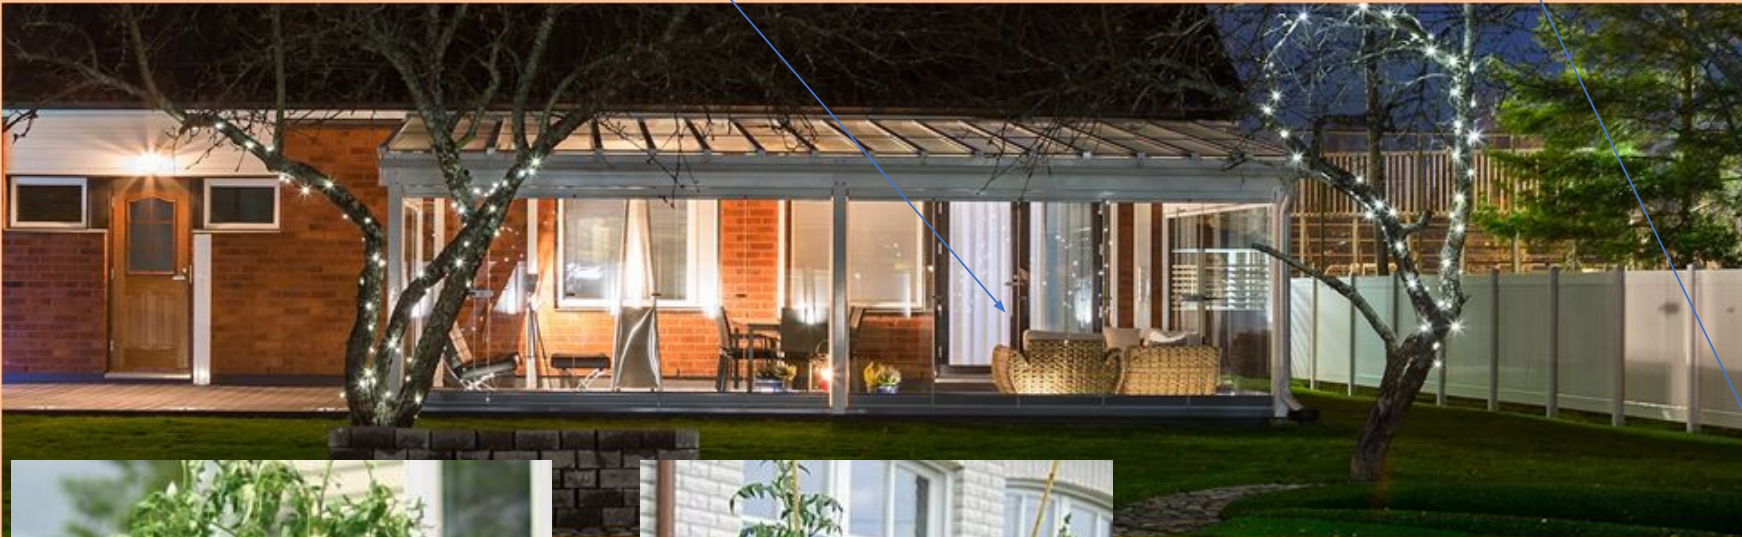

Lighting setting: Evening dusk view with multiple house exterior lights as in this large image and lights in the wooden hot tub and yard decoration lights. When making the dusk lighting, please save the basic daylight sunny view - we would like to see which one works better.

Hot tub: Traditional wooden hot tub on the terrace outside the glass terrace (it is wood heated with a fireplace so it can not be inside the glass out room. Interior underwater lights in the tub and yard decoration lights. We need to use a wooden hot utb because it is economic and right for the target audience. Electric hot tubs would be too expensive..

Full width glass wall terrace with planted vegetables growing on one side. Tomato for example..
Flower beds on outer windows.

Sunpanels on the roof and an electric car (MB Smart preferably) plugged at the socket with a green powercable attached to the house. Open side wood terrace afgter glass wall terrace.
