

# SIC !

Задание на самостоятельную подготовку к контрольной работе:

1. Изучить раздел 3.3. Protection or Abstinence в RFC 4041 “Requirements for ...in Routing Area Drafts”, 2005.
2. Изучить раздел 5.2. Crossing firewalls в RFC 2324, 1998.
3. Ознакомиться с разделами 3.0 – 4.0 Firewall Enhancement Protocol (FER), предложенного в RFC 3093, 2001.

Быть готовым к письменным ответам на вопросы, указанные в разделе RFC 1121, написанном V.Cerf.

**ОТВЕТЫ:**

Act One - The Poems

## ROSENCRANTZ AND ETHERNET

by  
Vint Cerf

**All the world's a net!** And all the data in it merely packets  
come to store-and-forward in the queues a while and then are  
heard no more. 'Tis a network waiting to be switched!

**To switch or not to switch? That is the question.** Whether  
'tis wiser in the net to suffer the store and forward of  
stochastic networks or to raise up circuits against a sea  
of packets and, by dedication, serve them.

**To net, to switch. To switch, perchance to slip!**

**Aye, there's the rub.** For in that choice of switch,  
what loops may lurk, when we have shuffled through  
this Banyan net? Puzzles the will, initiates symposia,  
stirs endless debate and gives rise to uncontrolled  
flights of poetry beyond recompense!

## Reactions to RFC 3514

A few years ago, I wrote [RFC 3514](#), an April 1 RFC. I received lots of email, and even a few phone calls. Here are some of the responses I got, unedited except for the senders' names. (You can read a press report of the reactions [here](#).)

One response was a bit worrisome...

*Good day sir. Nice contribution for this April 1st.*

*But your jest, were there a reserved bit that actually could be used, could actually have merit to address a concern on the part of major content providers about internet redistribution of broadcasters' content.*

*So, you may see this again.... Happy April Fools Day.*

One response was rather, umm, "interesting". I never knew that RFCs could inspire this sort of thought.

*I was reading your info about the proposed RFC and my mind and fingers strayed to check out my own evil bit... I've just got my breath back. Shouldn't there be a health warning about playing with your own bits?*

Some people implemented portions of it, or suggested extensions:

*Not hard to implement the receiving end. The difficult part will be to make the API for the malicious content sufficiently easy that hackers will willingly, nay, joyfully implement it.*

*Here is the mailcap entry for 'mutt' to implement proper handling of the MIME type for both designated secure machines:*

```
# RFC-3514-compliant MIME attachment handling - secure version
```

```
application/msword; true; \
```

```
    print=true; \
```

```
    notes=Entered 01 April 2003
```

*and completely insecure machines:*

```
# RFC-3514-compliant MIME attachment handling - insecure version
```

```
application/msword; %s; \
```

```
    print=%s; \
```

```
    notes=Entered 01 April 2003
```

# The Complete April Fools' Day Rfcs

Paperback – March 20, 2007

by [Thomas A. Limoncelli](#) (Author), [Peter H. Salus](#) (Author)

**Thomas A. Limoncelli** is an internationally recognized author and speaker on many topics including system administration, time management, and grass-roots organizing. A system administrator since 1988, he has worked for small and large companies including Google, Cibernet, Lumeta, AT&T, Lucent / Bell Labs. He has written three books: two editions of *The Practice of System and Network Administration* from Addison-Wesley (2001, 2007) and *Time Management for System Administrators* from O'Reilly (2005). He shared SAGE's Outstanding Achievement Award in 2005. He holds a B.A. in C.S. from Drew University, Madison, New Jersey, USA. His web site and blog is <http://www.EverythingSysadmin.com>.

**Dr. Peter H. Salus** talks too much and writes too much. He is a frequent speaker at computer events in the US, Canada, the UK, the Netherlands, Belgium, Russia, Australia, Finland, Denmark, Brazil, Chile, and the Czech Republic. He has appeared on the BBC, the Discovery Channel, PBS, PCTV, and the *Dr. Dobbs* webcast as computing and networking historian. Dr. Salus has written or edited over a dozen books, including [The ARPANET Sourcebook: The Unpublished Foundations of the Internet](#) (due June 2007), *A Quarter Century of UNIX*, *Casting the Net: From ARPANET to INTERNET and Beyond*, the four-volume *Handbook of Programming Languages*, and *The Big Book of IPv6 Addressing RFCs*.

**WE WERE FOOLED!**  
.. BUT .. YOU WON'T BE .....

A graphic with the text "WE WERE FOOLED!" in a large, bold, black font. Below it, the text ".. BUT .. YOU WON'T BE ....." is written in a smaller font. In the center of the word "FOOLED!", there are two small cartoon gnomes.

Happy April Fools Day

The text "Happy April Fools Day" is written in a stylized font. "Happy" is in a cursive script, "April Fools" is in a bold, blocky font with a red and white checkered pattern, and "Day" is in a cursive script.
