«Глобальное изменение
климата»**

Project
"Global Climate Change"

Surely, we can exactly see that our world develops quite fast, the more people invent, explore, investigate, the more issues can happen.

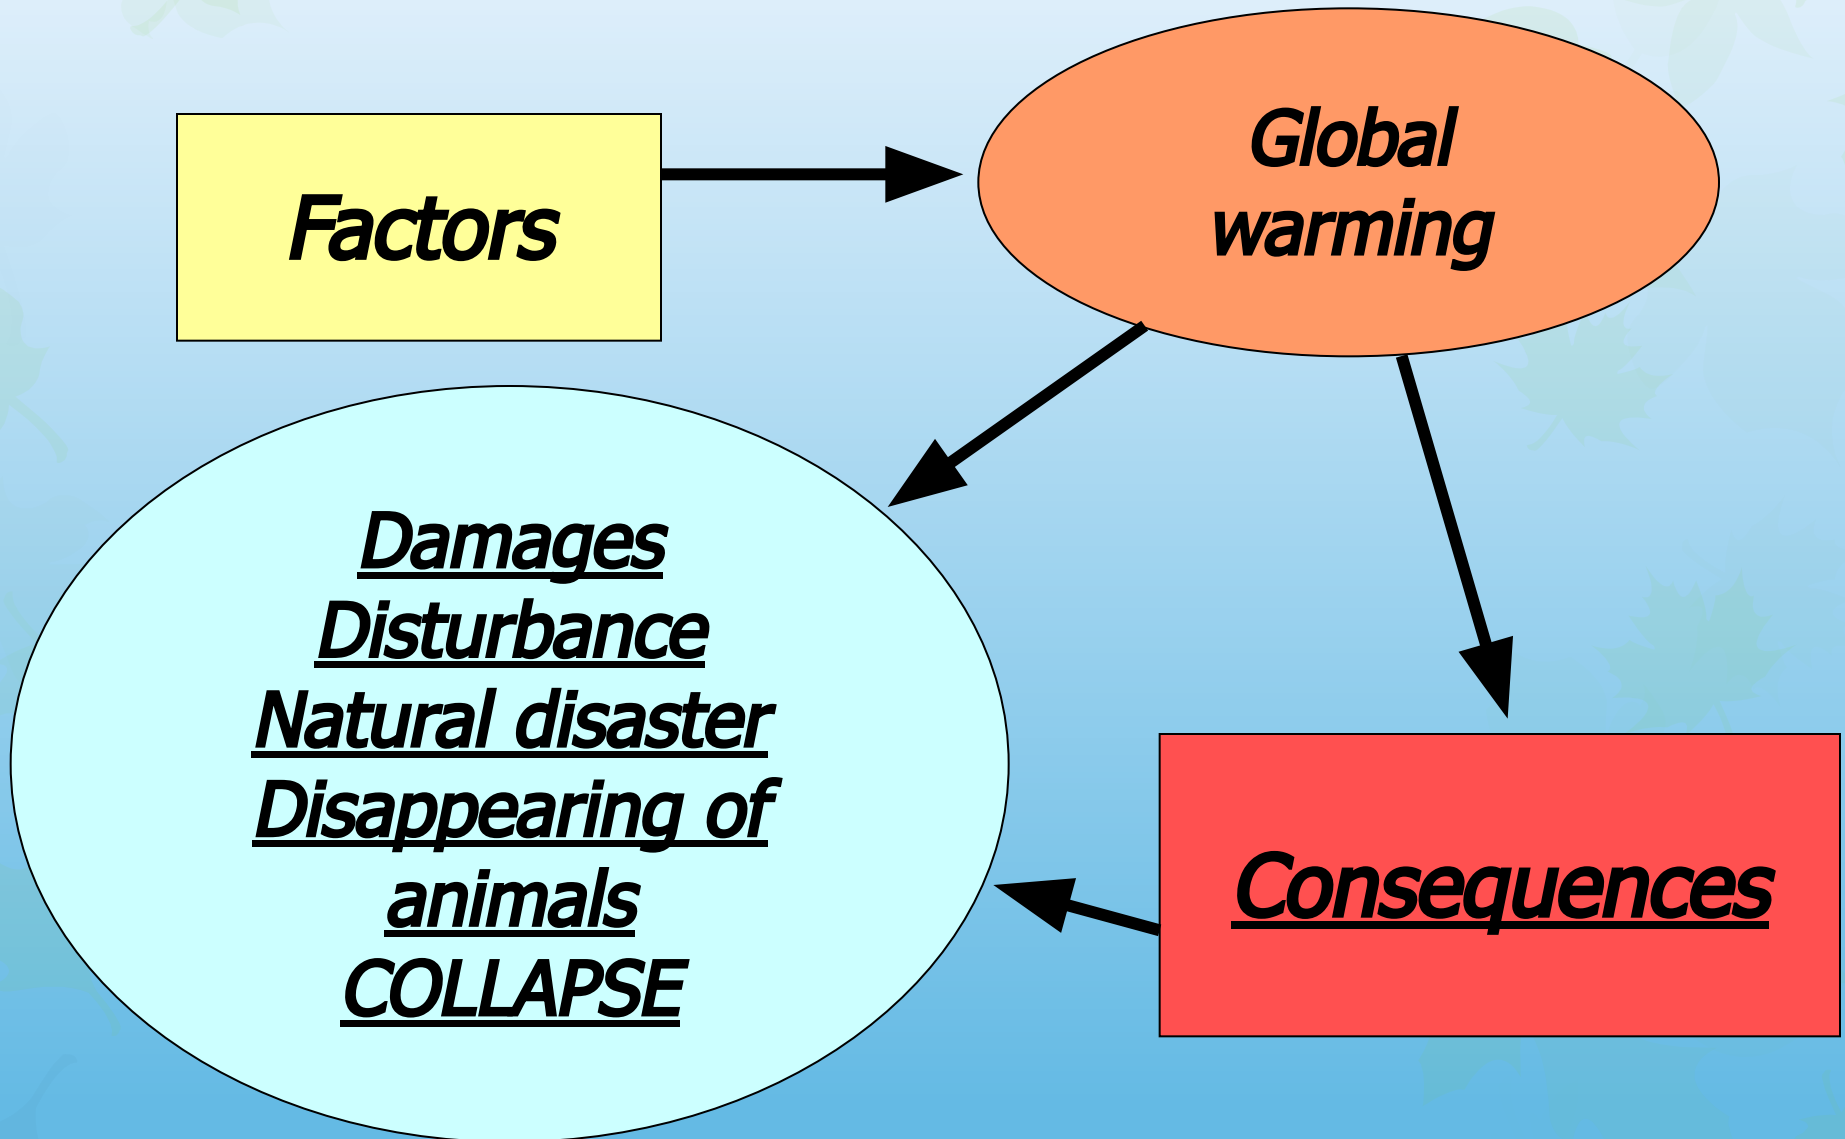

CLIMATE CHANGE

Can it be essential problem for thinking of?

Brainstorming. Let's look into the issue!

Global warming reveals itself in serious climate changes, which are connected with important factors by all means.

Evidence of global warming in the natural world

1. Ice-covered territories of the Earth are shrinking in size.

2. The level of the ocean is rising constantly.

3. The number of environmental projects on TV is increasing.

4. The amount of carbon dioxide in the air is increasing.

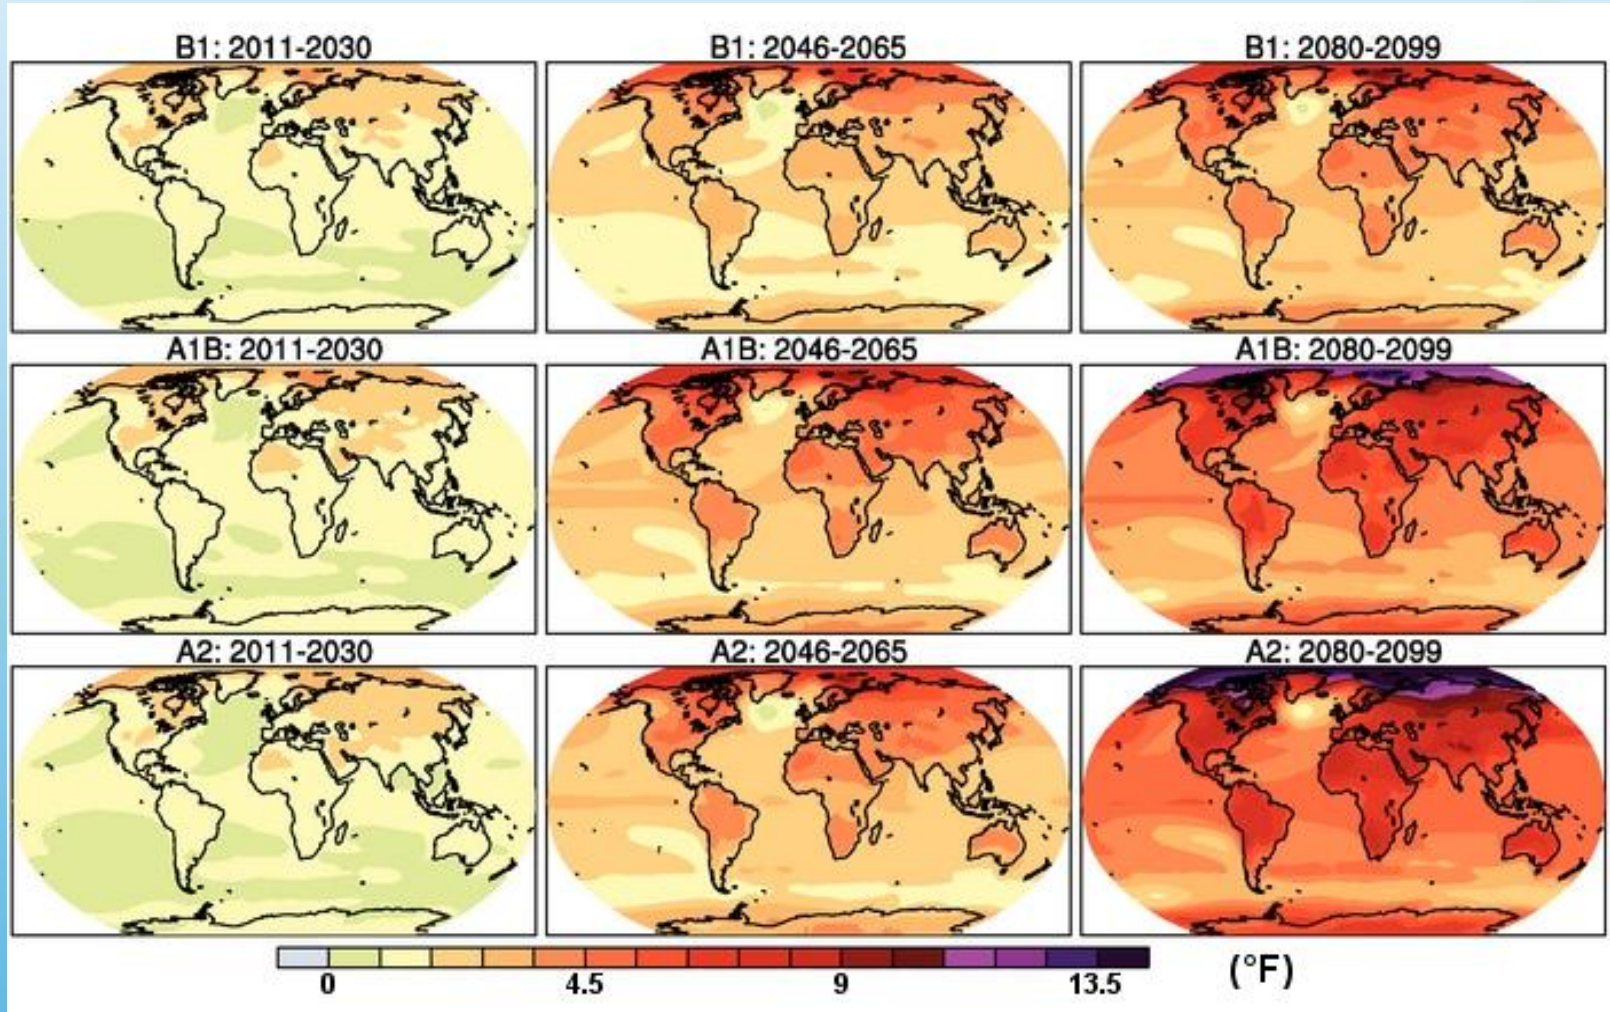

5. Arctic region find a considerable number of dead bears which just float in the sea.

6. In the warm waters of Indian Ocean corals are dying too.

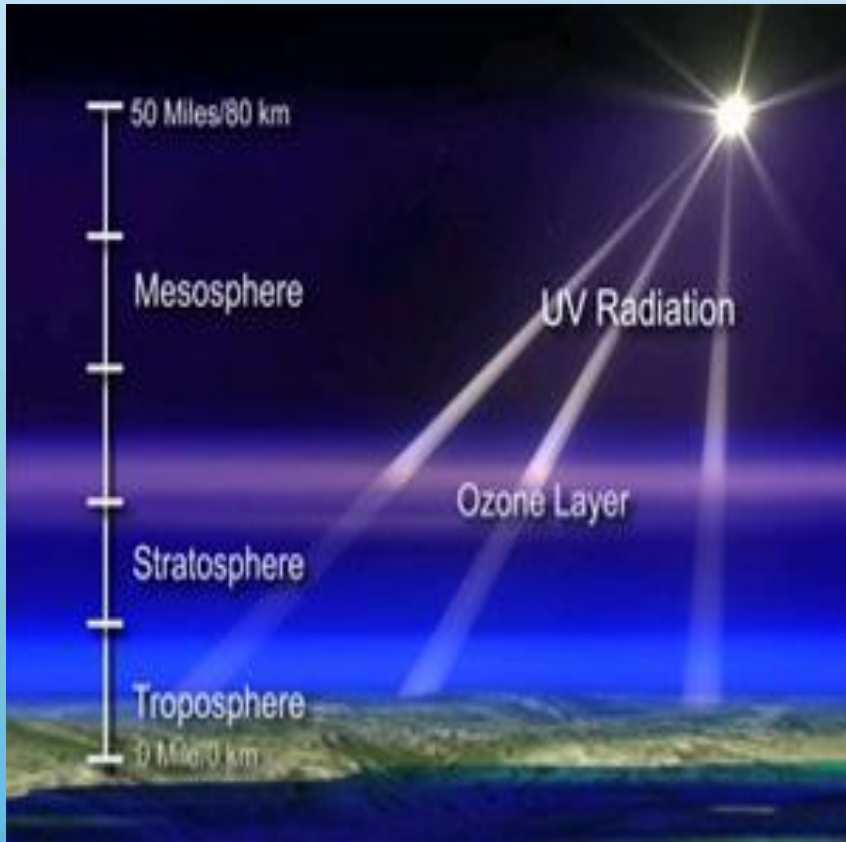

7. The temperatures are rising all over the world.

8. Scientists of different countries are working on clean energy projects.

9. The ozone layer is getting thinner and ultraviolet radiation gets through it more easily than it used to.

Some points of view

In order to understand this issue quite well, we should see some opinions, which are so significant for resolution!

I know that every time people fly, and they contribute to the global warming effect. Harmful gases, carbon dioxide – it's not very good for everyone.

People don't pay attention to minor energy consumptions...energy waste may not be very important for nature , but ...there are lots of people in the world!

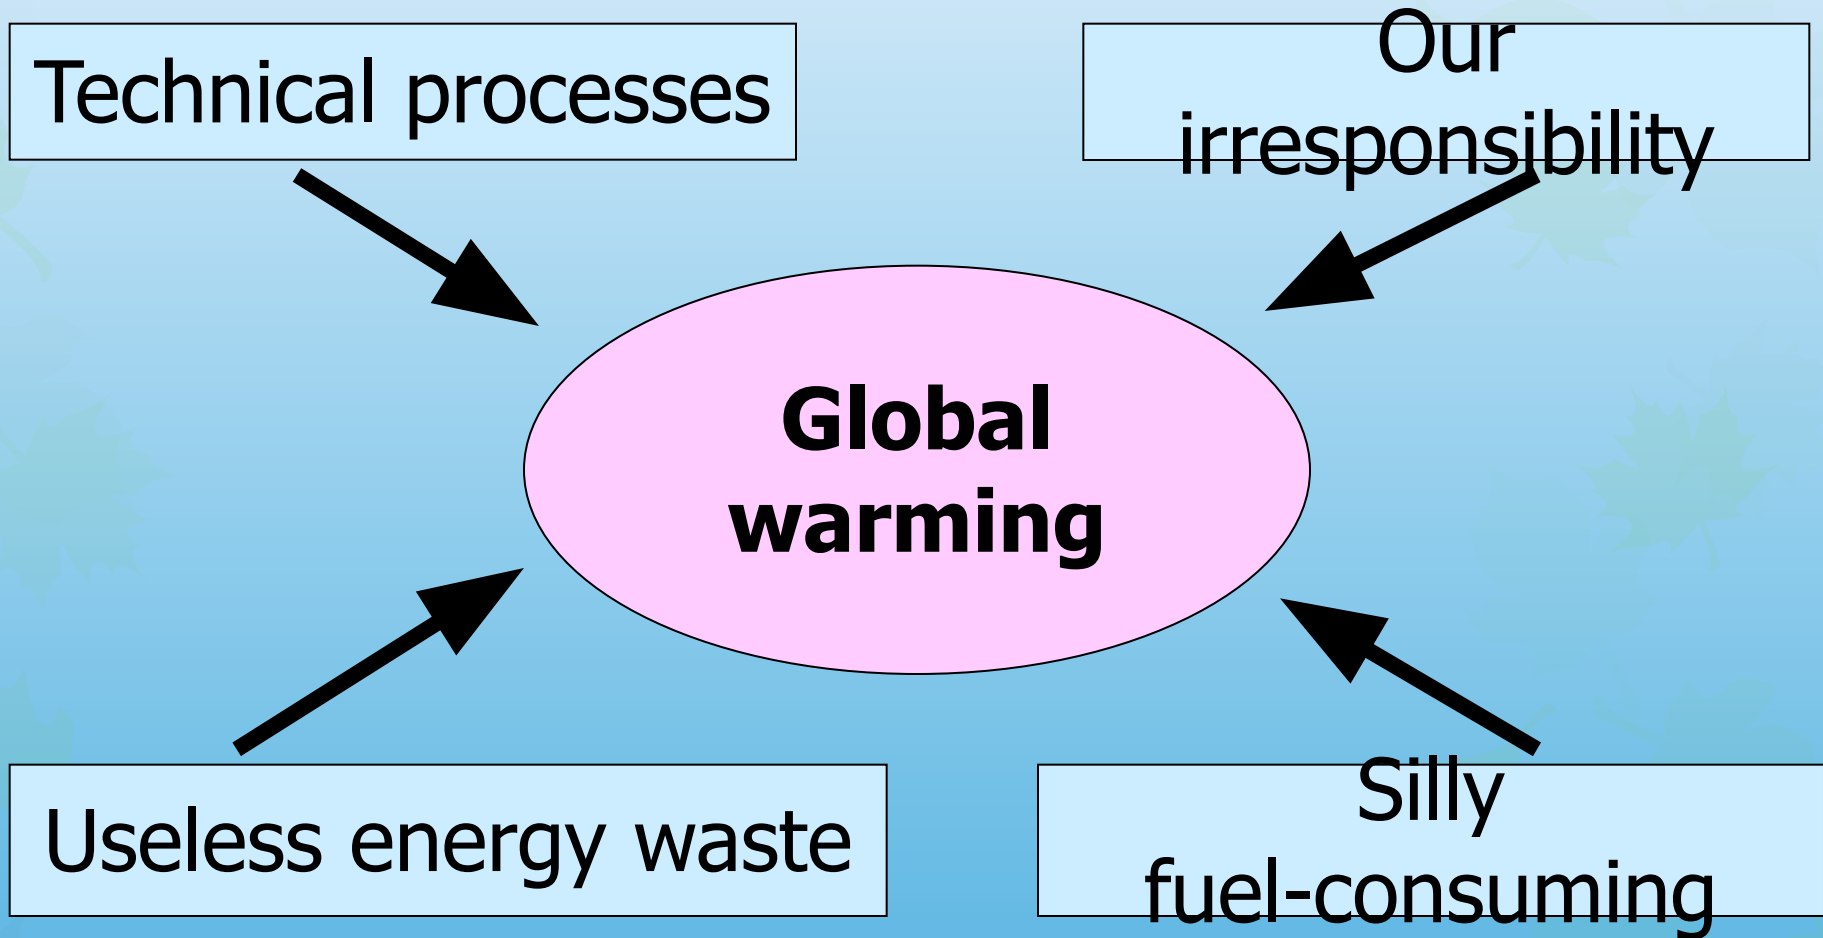

However, people often use big off-road vehicles for city driving! It's silly and irresponsible to drive fuel-consuming cars when it's not necessary!

We often buy things we don't really need, and throw away a lot too! Isn't it silly to use energy to produce unnecessary things and then use it again to eliminate the waste?

Definitely, I've already looked through many people's opinions. That's what I see :

*What do you mean? Can that
be right?*

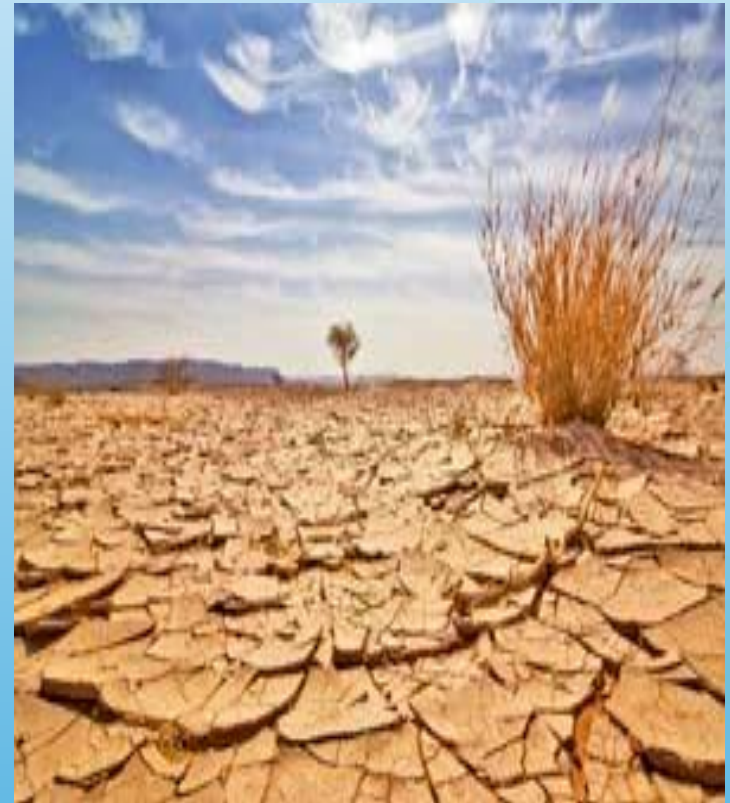

On the one hand I believe that global warming is consequence of human's activity, but on the other hand no one can prove that this problem is directly connected with people! Maybe just nature and God decide all the aspects of life!

Whatever we suggest and think about God's influence or human being, we should pay attention to consequences (more detailed)!

Keep the word on : how can our life be altered?

Hypothesis 1

Global warming can change the geographical profile of the Earth and its vegetation cover.

Hypothesis 2

Global warming can make lots of animals extinct, which will upset the balance of environment!

Hypothesis 3

Global warming can affect people's health ,
lifestyle and well-being dramatically!

Time to confess!!!

I mean, you understand what it leads to! Don't you want to change the situation at all? Ok. Surely, you want! Let's think of reduction the pressure! Say a word : we can change something by various means! However, we hurt our nature and many things depend on us! You shouldn't blame for God or nature (in global changes)! Remember, how many mistakes were made and are made by you!

We must:

Travel by air less! Harmful gases destroy the air!

Use public transport instead of car, in order to avoid serious problems of accidents (not only accidents)! By the way, that's more interesting! 😊 Maybe, you'll meet your fate!

Avoid using plastic packaging if not necessary!

Sort one's waste and carry it to recycling centre! Don't pollute the streets with it, of course! Be tidy!

Summing up...

To sum it up , I `d like to say : whatever happens ,stay a man! Always remember that everything in your life depends on you and if you`re even alone, you can make great changes than most of people together! Protect your nature like you protect yourself, because you are an essential part of it! Surely, you can say that there are so many words like word "you" in the text! But if it`s really like this, it`s really important! Don`t put away! Solve right now! Are YOU ready to be the great MAN or will YOU sit on the chair and do nothing at all??! Ok. Anyway, you will just look through the window and see how life goes without you!

GOOD LUCK! Try to ask the most crucial question :
WHO`LL DO UNLESS YOU?
