Life in the rain forest

There are many plants and animals.

**There are also lots of different plants in rainforests. For example:
Vines and rubber trees**

There are lots of beautiful birds in the rain forest.

This flying squirrel lives in the canopy of the rain forest. It 'flies' from tree to tree.

Orangutans come from the forest of Southeast Asia. People are looking after these baby orangutans because they haven't got any mothers. When the babies grow up they can go their homes in the wild.

They are in danger because people sometimes catch them and sell them for pets.

Leopards are very beautiful. They are in danger because some people kill them for their fur.

This frog lives in. It uses suckers on its feet to hold on to the leaves.

Thanks for attention!

Good bye!!!
