# Smart Home

A smart home is a home that is equipped with technology to remotely control and automate household systems like lighting, doors, thermostats, entertainment systems, security alarms, surveillance cameras and other connected appliances. But it's more than just remote controls and fancy gadgets.

Security Cameras

The main benefit of choosing a smart home security camera over a system managed by a professional security organization is the ability to monitor your home security through an app installed on your smartphone, tablet, or computer. You have the power to watch the real-time video feed, review video recordings, and even communicate with anyone inside or around your home. In addition, a smart home security app enables you to track and manage your home's security wherever you have an internet connection—while laying in bed, at work, or even while you're out of town.

Smart home security cameras are similar to surveillance cameras installed by home security organizations but have the added benefit of connecting to your smart home system. Smart home security cameras can be purchased individually or as a bundle. Bundles packages can help to secure your entire home through a wide variety of features, including two-way voice communication, recording, voice control, night vision, and much more.
