

Presentation topic: «My Car»

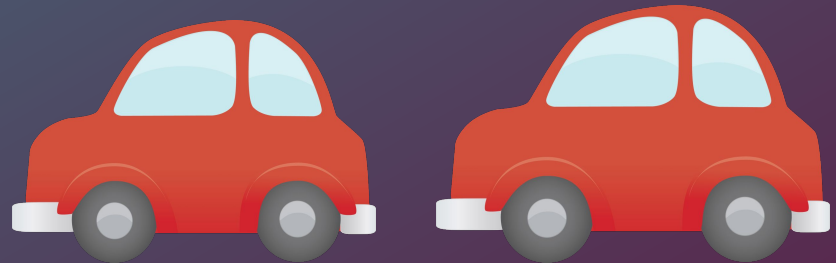

In this presentation I will tell
you about my car.

And so, start

First, I'll tell you about the history of the car

This VAZ 2109, was first released in 1987, in the city of Toliatti and was produced until 2004

Initially, the car was equipped with inline 4-cylinder 8-valve carburetor gasoline engines of 1100, 1300 and 1500 cubic centimeter

When, in addition to the three-door "vos'merka" VAZ began to offer customers a more practical five-door hatchback, it was a really pleasant surprise. Sports at the time appearance, powerful engine (later) and attractive price on the background of foreign cars did their job, people loved this model and willingly bought it.

The machine differed from the "classic" models of VAZ great efficiency and better handling. Machines family "Samara" were among the most coveted in the USSR in the late 1980s. Since 1999, a smooth replacement of the first generation Samara models with restyled models of the Samara 2 family began. Some modifications of VAZ 2109 lasted on the conveyor until 2004.

This car my brother and I bought in the winter of 2016. The machine is dark green. The engine capacity of 1.5 liters. Engine power 72 hp(horsepower)

We chose this car because it was the best option in our price range (~1000-1200\$), and not a drop sorry about your choice

Another reason for buying this particular machine is that it is very fast compared to other models. It's one of those cars I used to dream about as a kid.

In the future, I plan to update the paint on the car, put the interior of VAZ 2170, set loud and high-quality music.

This is my perfect representation of the car.

And in the evenings, when it is sad, I will look out the window and enjoy the fact that I have such a beautiful car.
