Many people think that science fiction really began as a style of literature with Mary Shelley's *Frankenstein*, which appeared in the early 19th century. Two other great writers helped to shape the genre later in the century. The French author Jules Verne was a very important figure, and wrote many novels, which many people still read today. Well-known titles include "A Journey to the Centre of the Earth" and "From the Earth to the Moon". He wrote about things which didn't exist in his time – space travel, submarines, and aeroplanes. They were all 'future' ideas. The same is true of the other great 19th century writer – Englishman H G Wells. Probably the most famous of his novels is "The War of the Worlds", where aliens attack Earth with very sophisticated weapons – it is still so popular and relevant today that lots of films are made about it – the latest in 2005.

Alien encounters are a common theme in science fiction novels, with many books set on different planets, or in a different time. Some authors write only about 'science fact' – this is known as hard science fiction. The authors may write in detail about areas of physics and chemistry. Many of them have made very accurate predictions about future technology. Even something like "Star Trek" is well known for getting things right – when it started in the 1960s, doctors did not use scanners to diagnose illnesses, and mobile phones did not exist. And yet, the characters used very similar objects – and at the time people thought they were just fiction – but now we use them all the time.

Example: Science fiction **first appeared in the 19th century.**

Многие думают, что фантастика действительно началась как стиль литературы с Франкенштейна Мэри Шелли, появившегося в начале XIX века. Два других великих писателя помогли сформировать жанр позже в веке. Французский писатель Жюль Верн был очень важной фигурой, и написал много романов, которые многие люди до сих пор читают сегодня. Известные названия включают "путешествие в центр Земли" и "от Земли к Луне". Он писал о вещах, которых не было в его путешествиях во времени, подводных лодках и самолетах. Все они были "будущими" идеями. То же самое относится и к другому великому писателю XIX века – англичанину Г. Уэллсу. Пожалуй, самым известным из его романов является "Война миров", где инопланетяне нападают на Землю с очень изощренным оружием – она по – прежнему настолько популярна и актуальна сегодня, что о ней снято много фильмов-последних в 2005 году. Чужеродные встречи являются общей темой в научно-фантастических романах, с большим количеством книг, установленных на разных планетах, или в другое время. Некоторые авторы пишут только о "научном факте" – это известно как трудная фантастика. Авторы могут подробно написать о областях физики и химии. Многие из них сделали очень точные прогнозы относительно будущих технологий. Даже что – то вроде "звездного трека" хорошо известно для того, чтобы все исправить-когда он начался в 1960-х годах, врачи не использовали сканеры для диагностики заболеваний, а мобильных телефонов не существовало. И еще, символы очень похожие

Many people think that science fiction really began as a style of literature with Mary Shelley's *Frankenstein*, which appeared in the early 19th century. Two other great writers helped to shape the genre later in the century. The French author Jules Verne was a very important figure, and wrote many novels, which many people still read today. Well-known titles include "A Journey to the Centre of the Earth" and "From the Earth to the Moon". He wrote about things which didn't exist in his time – space travel, submarines, and aeroplanes. They were all 'future' ideas. The same is true of the other great 19th century writer – Englishman H G Wells. Probably the most famous of his novels is "The War of the Worlds", where aliens attack Earth with very sophisticated weapons – it is still so popular and relevant today that lots of films are made about it – the latest in 2005.

Alien encounters are a common theme in science fiction novels, with many books set on different planets, or in a different time. Some authors write only about 'science fact' – this is known as hard science fiction. The authors may write in detail about areas of physics and chemistry. Many of them have made very accurate predictions about future technology. Even something like "Star Trek" is well known for getting things right – when it started in the 1960s, doctors did not use scanners to diagnose illnesses, and mobile phones did not exist. And yet, the characters used very similar objects – and at the time people thought they were just fiction – but now we use them all the time.

21. (NOT DO)

- “‘Dear Ron, and Harry if you’re there,“ I hope everything went all right and that Harry is okay and that you didn’t do anything illegal to get him out, Ron, because that would get Harry into trouble, too. I’ve been really worried and if Harry is all right, will you please let me know at once, but perhaps it would be better if you used a different owl because I think another delivery might finish your one off.““I’m very busy with schoolwork, of course’ — How can she be?” said Ron in horror. “We’re on vacation! — ‘and we’re going to London next Wednesday to buy my new books. Why don’t we meet in Diagon Alley?”“Let me know what’s happening as soon as you can. Love from Hermione.’

"Дорогой Рон, и Гарри, если вы там," Я надеюсь, что все прошло хорошо и что Гарри в порядке и что ты не сделал ничего противозаконного, чтобы вытащить его, Рон, потому что Гарри в беде, тоже. Я действительно волновался, и если Гарри в порядке, пожалуйста, дайте мне знать сразу, но, возможно, было бы лучше, если бы вы использовали другую сову, потому что я думаю, что еще одна доставка может закончить ваш один." Я очень занят с учебой, конечно, — как она может быть?" сказал Рон в ужасе. "Мы в отпуске! - И мы едем в Лондон в следующую среду, чтобы купить мои новые книги. Почему бы нам не встретиться в Косом переулке?" "Позвольте мне знать, что происходит, как только вы можете. Любовь из Гермиона."
