

# TIC DISORDERS

Dr. Volovik Galina

# Tourette's Disorder

Both multiple motor and one or more vocal tics have been present at some time during the illness, not necessarily concurrently.

The tics may wax and wane in the frequency but have persisted for more than 1 year since first tic onset.

Onset is before age 18 years

Disturbance is not attributable to the physiological effects of a substance or another medical condition.

# Persistent (Chronic) motor or vocal tic disorder

Single or multiple motor or vocal tics have been present during the illness, but not both motor and vocal.

The tics may wax and wane in frequency but have persisted for more than 1 year since first tic onset.

Onset is before age 18 years.

The disturbance is not attributable to the physiological effects of a substance or another medical condition.

Criteria have never been met for Tourette's disorder.

# Provisional tic disorder

Single or multiple motor and/or vocal tics.

The tics have been present for less than 1 year since first tic onset.

Onset is before age 18 years.

The disturbance is not attributable to the physiological effects of a substance or another medical condition

Criteria have never been met for Tourette's disorder or persistent (chronic) motor or vocal tic disorder.

# Prevalence

- ▣ Tics are common in childhood but transient in most cases.
- ▣ Prevalence of Tourette's disorder is 3-8 per 1000 in school age children.

Ratio: from 2:1 to 4:1

# Development and course

Onset typically  
between 4-6  
years.

Peak severity  
between 10-12  
years.

A small  
percentage of  
individuals will  
have  
persistently  
severe or  
worsening  
symptoms in  
adulthood.

# Risk and prognostic factors

# Comorbidity

# Treatment

Education for families

Pharmacological intervention

Haloperidol (Halidol)

Pimozid (Orap)

Risperidone (Risperidal)

Olanzapine (Zyprexa)

Clonidine ( $\alpha_2$ -adrenergic agonist)

Atomoxetine (Strattera) – in treatment of children and adolescent with ADHD and tic disorders.
