Warm up

Answer the questions:

1. Is oil a fossil fuel?
2. Does burning oil produce carbon dioxide?
3. What are scientists trying to do now?
4. What should oil-producing countries do?

Oil is good and bad. It's good because it helps our energy needs. It's bad because it causes pollution. Oil is a fossil fuel. Burning it produces carbon dioxide (CO₂). This is one of the biggest causes of global warming. There isn't much oil left in the ground. Some people say it will all be gone this century. I suppose that means we won't make as much pollution. But what will we do when the oil runs out? Scientists are working on that right now. We need to do something because we use oil to power our cars, homes and factories. Whatever we replace oil with must be better for the environment. I don't think oil-producing countries are happy their oil will run out. They need to start thinking about how to make money after the oil has gone.

9 Write this email.

You are Pete Norman, the Manager of Safety World. The company makes and sells safety equipment for oil rigs. You receive an email from Ben Brenner, Safety Officer on Nord Oil Platform. Ben asks if you have any new safety equipment for emergency escapes from oil platforms. Reply to Ben.

- thank Ben for his email yesterday
- refer to his request
- confirm you have new emergency escape equipment for sale
- remind Ben: Safety World is Europe's largest manufacturer of oil safety equipment
- give new information: Safety World won the International Safety Award last year
- request action: send information about safety needs on Nord

10 Exchange emails with a partner. Take the part of Ben, and reply to your partner's email.

- thank for email
- remind Pete: there was a serious fire on an oil platform last year; there were many casualties because of poor escape equipment
- give information about needs: you want new fire and emergency escape equipment such as heat shields, heat-resistant ropes, ladders, enough for crew of 230
- ask Pete to send catalogue for these items
