# Garage features

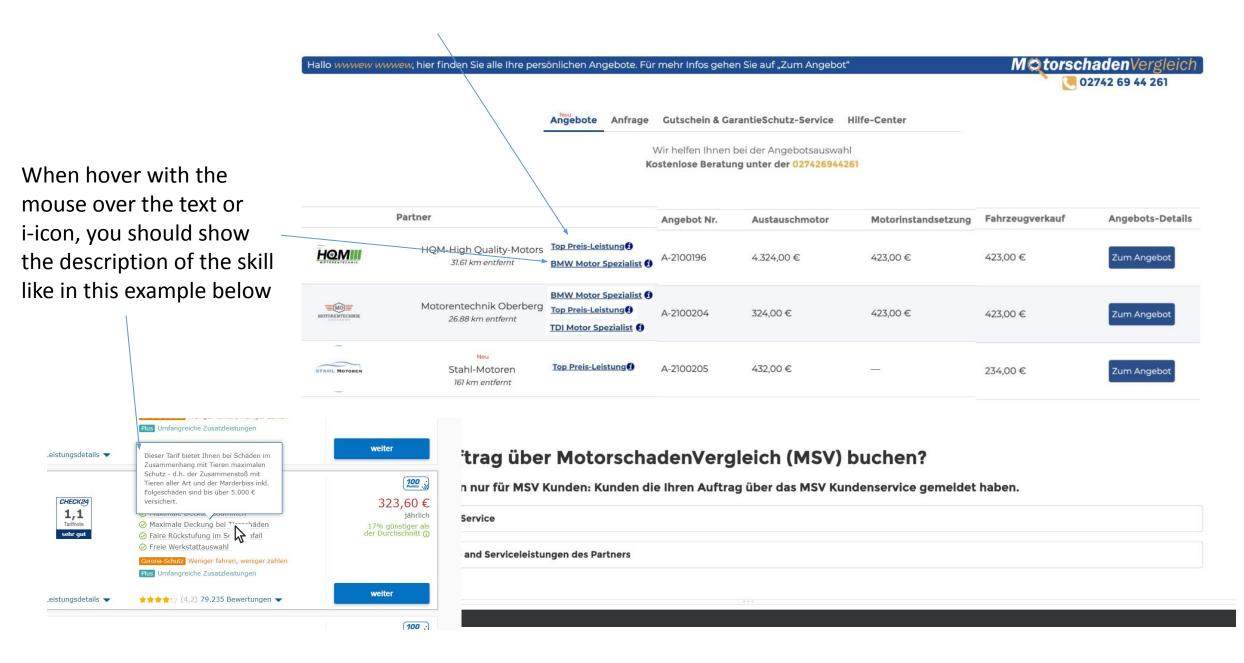

- We have some skills (certificate) for some specific garages.
  - E.g Skill1: Title: "Highest Quality" | Description: "This garage has the highest quality standarts"
  - E.g Skill2: Title: "Very Cheap" | Description: "This garage has very cheap prices"
  - E.g Skill3: Title: "TDI specialist" | Description: "This garage is specialized for TDI engines"
  - E.g Skill4: Title: "BMW specialist" | Description: "This garage is specialized for BMW engines"
- The garages should have some specific skills:
  - E.g. Boxengasse should have: skill1 skill3 skill4
  - E.g. Werkstatt1 should have: skill1 skill2 skill3
- The skills should be showed in costumer portal.
- Some skills should be showed every time (skills where there is no "specialist" in the title.) (skills 1 and 2)
- Some skills should be showed only for certain conditions (skills where there IS "specialist" in the title.) (skills 3 and 4)
  - If there is the first word of the skill title (TDI or BMW) in the lead parameter make or modell or type then you can show the skill
  - If there is no word (e.g. BMW) in the lead parameter make/modell/type then do not show the skill
  - E.g For Werkstatt1 you should NOT show the skill "TDI specialist" if the lead is for a make =Audi, modell=A4 Avant, type =1.9 TFSI 2004-2005
  - E.g For Werkstatt1 you should SHOW the skill "TDI specialist" if the lead is for a make =Audi, modell=A4 Avant, type =1.9 tdi 2004-2005

These are only examples. We will give you the exact skills Title and Description in german language. It should be possible to add and delete and change the skills.

I do not know how you want to implement that. Either you can do everything in costum code. Or i have see that there is the possibility to add skills and assign them to users (in production)(see screennshot below). (I can also add the skills and assign them myself). I do not know which method is more easy.

The design of the skills should look like this. There must be standard sf components for these hover tooltip text
