Automating products is extremely expensive and time consuming and there is a minefield of IP to navigate.

We've done the leg work and OEM's need only license our software module that runs on low cost and processing power hardware and their products can enter the mobile robotics space in no time.

Our solution is Q-SLAM, an in-house designed and implemented Simultaneous Localization and Mapping (SLAM) solution.

Q-SLAM is a comprehensive autonomous navigation solution that builds a map of its environment while learning its location.
