

CTBTO Youth Group (CYG)

About Me

Milana Ozerina

- CYG Member since 2018
- Coordinator of Eastern Europe
- B.A. in International relations (MEPhI, Russia)
- Work at Rosatom Technical Academy
- Professional interests: Nuclear non-proliferation, Disarmament, Gender balance and Generation IV Systems

Building Bridges (2021)

My vision of the CTBTO (2018)

Building Bridges (2021)

My vision of the CTBT 2026 (2020)

About Me

- Ksenia Pirnavskaia, Russia
- CYG Member since 2018
- Education Coordinator
- B.A. in International relations (MEPhI, Russia)
- M.S. in Science and Technology Policy (KAIST, South Korea)
- RA at the Korea Policy Center for the 4th Industrial Revolution
- Nuclear nonproliferation, disarmament, science diplomacy and policy, digital education
- 23 countries and more to go..hopefully

Overview

- About the CYG: Background, objectives and key statistics
- CTBT overview
- 2021 Coordination Team: Members, work clusters and current initiatives
- Becoming an active member
- Educational resources

About the CTBT

- (1996) Comprehensive Nuclear-Test-Ban Treaty
 - Article I - Basic Obligations
 - Article XIV - Entry Into Force
 - Article IV - Verification

About the CTBTO

- CTBTO
 - Preparatory Commission for the CTBT
 - Provisional Technical Secretariat

Annex 2 States

44 states that participated in the CTBT's negotiations between 1994 and 1996 and possessed nuclear power reactors or research reactors at that time

Remaining Annex 2 States

Missing Signatures:

- Democratic People's Republic of Korea (DPRK)
- India
- Pakistan

Missing Ratifications:

- China
- Egypt
- Iran
- Israel
- United States

- Total States: 196
- Total Signed: 185
 - Latest State Signatory: Cuba
- Total Ratified: 170
 - Latest Ratifying State: Comoros

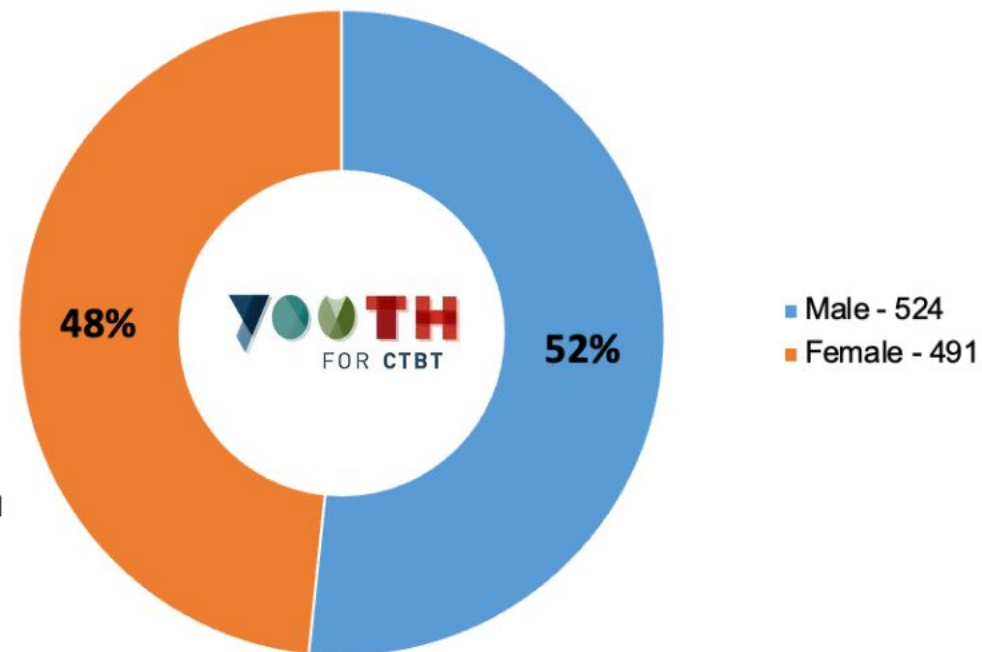

What is the CYG?

A network of students and young professionals who are committed to contributing to global peace and security and who wish to actively promote the CTBT and its verification regime.

BUILD A BASIS FOR SCIENCE DIPLOMACY KNOWLEDGE TRANSFER TO THE NEXT GENERATION

INTERGENERATIONAL DIALOGUE: BUILDING A NEW GENERATION OF AFRICAN NUCLEAR EXPERTS, GHANA, 2020

CYG members discussed how the African Youth can be involved in the nuclear field and serve as the driving force behind the progress toward a world free of nuclear testing. They stressed the importance of strengthening the nexus between science and policy and developing university curricula that foster deeper thinking in this sphere. They recommended to have a delegation of young Africans to the NPT RevCon and boost participation as part of AFCONE.

CTBTO GEM - YOUTH INTERNATIONAL CONFERENCE, KAZAKHSTAN, 2018

Members of the Group of Eminent Persons (GEM) and the CYG members attended an international conference in Kazakhstan to reflect on the role of nuclear disarmament and non-proliferation in building global peace and finding ways to strengthen it in the future. CTBTO GEM and Youth Group members visited the former nuclear test site at Semipalatinsk, officially closed in 1991, where 456 nuclear explosions were conducted over the period of 1949 to 1989.

LECTURES FOR MEPHI PRE-UNIVERSITY STUDENTS, WEBINAR, 2020

The CYG Coordinator for Eastern Europe Natalia Zhurina (Russia) and Communications Coordinator Valeria Korotchenko (Russia) organized summer seminars for high school students where they presented the CTBT, CYG, its objectives and activities, and shared anecdotes from their membership experiences.

SCIENCE AND POLICY SEMINAR, ECUADOR, 2019

CYG member Luis Vazquez (Mexico), a PhD student at the University of Southern California's Department of Earth Sciences, participated in the panel "science, diplomacy and the CTBT: Latin America as a champion of non-proliferation and disarmament" alongside prominent experts. The participants stressed the importance of involving young people in science and diplomacy discussions. On the margins of the seminar, Luis talked about the CYG, its objectives and activities geared towards promoting the CTBT's entry into force.

"I DIDN'T CONSIDER WORKING IN THE FIELD OF NUCLEAR DISARMAMENT AND NON-PROLIFERATION, BUT THE MOMENT WHEN I PARTICIPATED IN THE CTBTO CONFERENCE FOR THE FIRST TIME, AS A MEMBER OF THE CYG, CHANGED MY LIFE FOREVER. THANKS TO THE CYG I AM WHO I AM NOW."

PERSONAL ACCOUNT

Marrying politics and technology: inaugurating the Moscow Science Diplomacy School project

By **Ksenia Pimenovskaya**
Nuclear Research University (MEPhI), Moscow, Russian Federation

“As much as scientists have to be informed about politics, politicians and policy experts must know the basics of science, especially in the field of weapons of mass destruction, to provide correct analysis and make right decisions based on it,” says Adlan Margoyev, director of the PIB-center “Rusista and nuclear non-proliferation programme.”

Margoyev was among experts participating in the first Science Diplomacy School held in Moscow at the National Research Nuclear University (MEPhI) and Moscow State Institute of International Relations (MGIMO) university 24-27 April 2018.

She was among CYG members participating in the second CTBT Science and Diplomacy Symposium held in Vienna in 2018.

What I noticed during the event was that the idea of integrating people from strikingly different fields in the framework of nuclear testing topics - is challenging but fruitful and rewarding both for the organizers and participants.

Nevertheless, it is always a problem for diplomats and others who may have brushed science aside to really understand, appreciate and benefit from science communication.

Inspired by the example of the Science Diplomacy school established by the Trieste, Italy based World Academy of Sciences for the Advancement of Science in Developing Countries, I was determined to promote science diplomacy in Russia.

But I had to consider the challenge for students majoring in science to dive into international relations and equally for students majoring in international relations or law to keep up with scientific knowledge and approaches.

My idea was to attract students

losing the gap between science and diplomacy is a crucial task, especially in the field of nuclear non-proliferation, disarmament and nuclear testing, due to the complexity of politics and science, writes Ksenia Pimenovskaya.

college and make it more feasible for students to bridge the gap between the fields of science and diplomacy.

The school

From 24-27 April, 30 pm-selected undergraduate and graduate students from 15 leading universities in Moscow, St. Petersburg, Samara and Novosibirsk, including students from India and Kazakhstan, took part in the first Science Diplomacy School at the National Research Nuclear University (MEPhI) and Moscow State Institute of International Relations (MGIMO) university.

The school was organized by the International Center for Public Diplomacy, of the Science Diplomacy Club MEPhI, and the Student Scientific Society MGIMO of by the International Security Club MGIMO.

Participants with technical and engineering backgrounds analysed topical issues of international nuclear security and discussed possibilities for improving arms control regimes. They engaged distinguished experts from such organizations as the PIB-center, MEPhI,

Specialists introduced participants to the nuts and bolts of the CTBTO and IAEA's work. Panel discussions on demarcation of the Korean Peninsula, Iran's nuclear programme and international relations were also held. As well, rocket technologies, classifications of ballistic missiles, nuclear physics including the physics of explosion, geospatial tools for monitoring nuclear facilities, as well as the possibility of nuclear and radiological terrorism, were discussed.

A paramount goal of the school was to integrate young people from different

CYG CITIZEN JOURNALISM ACADEMY

The project will help to foster communication skills and teach how effectively use various communications and media tools to promote a world free of nuclear testing.

Professional communication trainers from **Atomic Reporters** will provide masterclasses, trainings and mentoring to **80 CYG applicants** using both live web sessions and asynchronous learning tools.

ATOMIC REPORTERS

Supporting journalists covering nuclear news

WHO?

Atomic Reporters & CTBTO

WHEN?

Mid-May to end of June 2021

WHERE?

On the CYG Website

WHAT?

Learn journalism skills

WHY?

To promote the Test-Ban-Treaty

SEMINAR 1: Covering a news event

In this first session we will address how a citizen journalist might go about reporting on a news conference. Participants will listen in on a simulated press event based on current events, then ask questions and come up with a lede - the first paragraph of a potential news article.

SEMINAR 2: Writing for online and offline media

Here we will approach the bulk of the work: telling the story. Participants will be provided with a particular scenario, then asked to write either a blog post, a news article or a Twitter thread. They will be encouraged to think in terms of storytelling, structure and readability.

SEMINAR 3: Effective use of social media tools

For a citizen journalist, social media is the form and the function. It is the speaker through which we hope to engage, impact and inform our audience - all around the world. Participants will be given a set of topics on nuclear issues, then be asked to develop a social media strategy that leverages the tools and resources discussed in the workshop.

SEMINAR 4: Mobile journalism

Smartphones are a powerful tool for storytelling that every citizen journalist should know how to use. In this workshop, participants will learn how to plan and execute a video storytelling project about the CTBTO's work using nothing but a phone.

This project has been sponsored through the contributions provided by the European Union in support of the CTBTO education and outreach activities and resources.
