# Что такое BSoD

Синий экран смерти - это (англ. Blue Screen of Death or Doom, BSoD) защитная реакция на критическую ошибку или сильный вирус.

Если появится BSoD даже на несколько секунд, надо вести компьютер в мастерскую, где профессионалы его починят. Так же BSoD может быть разных цветов. Это зависит от операционной системы Windows.

```
A problem has been detected and Spartak has been shut down to prevent damage to the club's spirit.

The problem seems to be caused by the following file: KNNV.SUIT
SPARTAK_M_IS_AT_THE_BOTTOM_OF_THE_LEAGUE

If this is the first time you've seen this stop error screen, give your manager another chance. If this problem appears again, follow these steps:

Windows

Check to make sure your manager is competent and your fans like him. If he isn't famous enough, ask Thomas Korn for advice.

If problems continue, keep changing managers until Spartak wins. Forget about other tournaments such as Europa League or Russian Cup. If you need to use safe mode to remove or disable components, hire a Spartak legend.

A problem has been detected and Windows has been shut down to prevent damage to your computer.

DRAGONITE_HAS_NO_LIFE

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Actually, don't do anything. BSoDs are good for your health. (If you work for Apple, that is.)

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. Or course, you could simply not run anything else that Dragonite uploads to Wisardi again.

Physical memory dump complete.
Contact your system administrator or technical support group for further assistance.
```

```
A problem has been detected and windows has been shut down to prevent damage to your computer.

A driver has overrun a stack-based buffer. This overrun could potentially allow a malicious user to gain control of this machine.

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any windows updates you might need.

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. If you need to use safe mode to remove or disable components, restart your computer, press F8 to select Advanced startup options, and then select safe mode.

Technical Information:

# Основные причины

- Ошибка или повреждение драйверов;
  - выход из строя комплектующих компьютера:  
видеокарты, процессора, материнской платы и т.п.;
- вирусы;
- сбой настроек операционной системы;
- конфликт установленных программ или драйверов.

# Диагностирование проблемы

- проверить внутреннее аппаратное обеспечение компьютера;
- температура;
- проверка памяти;
- проверка жесткого диска;
- отключить всё лишнее
