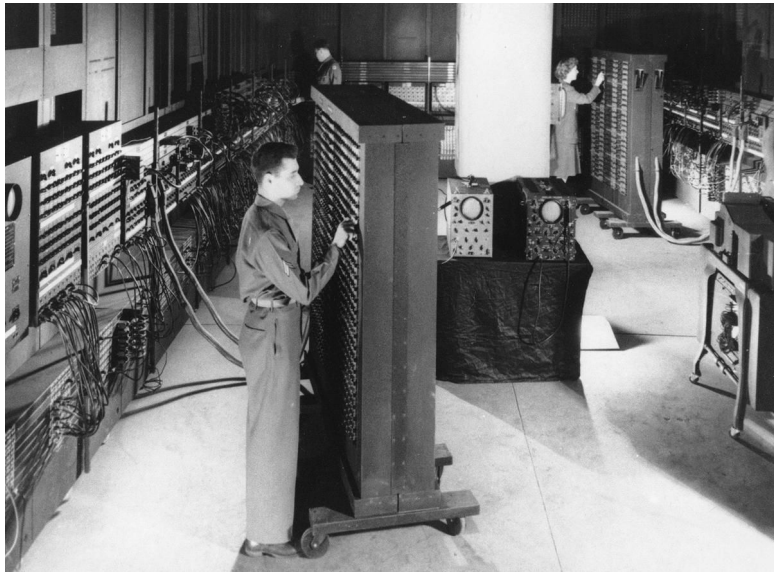
E-mail

History

- The creation of e-mail was preceded by the fact that in the 70 years of the 19th century was the most expensive and important technical and computer used by many people.



```
[user@server ~]# mail
Mail version 8.1 6/6/93.  Type ? for help.
"/var/mail/user": 0 messages
& ?
    Mail    Commands
t <message list>                type messages
n                               goto and type next message
e <message list>                edit messages
f <message list>                give head lines of messages
d <message list>                delete messages
s <message list> file           append messages to file
u <message list>                undelete messages
R <message list>                reply to message senders
r <message list>                reply to message senders and all recipients
pre <message list>              make messages go back to /var/mail
m <user list>                   mail to specific users
q                               quit, saving unresolved messages in mbox
x                               quit, do not remove system mailbox
h                               print out active message headers
!                               shell escape
cd [directory]                  chdir to directory or home if none given

A <message list> consists of integers, ranges of same, or user names separated
by spaces.  If omitted, Mail uses the last message typed.

A <user list> consists of user names or aliases separated by spaces.
Aliases are defined in .mailrc in your home directory.
```

- 1871 programmer ray Tomlinson wrote the software that allowed to send messages to a remote computer by using SIPNET.

The advantages of e-mail

You can communicate with people who are at a far distance:

- It's much easier
- you needn’t call

The disadvantages of email

- Users send spam
- You can got many advertisements sms. It can bore you.
