

# Maths

## Fractions

# Decimal Equivalents

# Aim

- I can calculate decimal fraction equivalents.

## Success Criteria

- I can write a fraction as a division calculation.
- I can recall quickly the decimal equivalents for  $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{10}$ ,  $\frac{3}{4}$  and  $\frac{1}{5}$ .
- I can use the written method of short division to calculate a decimal equivalent.
- I can round a decimal equivalent to three decimal places if necessary.
- I can sort decimal equivalents correctly using Venn and Carroll diagrams.

# Fraction Spinners

Click the button to spin the two hexagons to generate a fraction at the place where the edges meet.

Perform the actions relating to the fraction created.

**Spin to generate fraction**

**Stand up**  
if it is greater than half.

**Clap your hands**  
if it can be simplified.

# Fractions and

Fractions are another way of writing division.

$$\frac{4}{7} = 4 \div 7$$

Because of this, every fraction has a decimal number equivalent which we calculate by doing the division.

# Fractions and

Some decimal number equivalents we can learn as facts:

$$\frac{1}{2} = 1 \div 2 = 0.5$$

$$\frac{1}{10} = 1 \div 10 = 0.1$$

$$\frac{1}{4} = 1 \div 4 = 0.25$$

$$\frac{3}{4} = 3 \div 4 = 0.75$$

# Fractions and Division

However, some decimal number equivalents need to be calculated:

$$\frac{7}{8} = 7 \div 8 = ?$$

$$\frac{5}{6} = 5 \div 6 = ?$$

$$\frac{2}{7} = 2 \div 7 = ?$$

$$\frac{1}{9} = 1 \div 9 = ?$$

# Calculating a Decimal

When we want to calculate a decimal equivalent of a fraction, we use the written method of short division:

$$\frac{7}{8} =$$

	0	•	8	7	5		
8	7	•	0	6	0	4	0

We add the decimal point and the zeros to the calculation because we know the answer will be a decimal number less than one.

**Step 1: Calculate  $70 \div 8$**

$$\frac{7}{8} = 0.875$$

70 is immediately before 70 is 64, remainder 6

**Step 2: Calculate  $60 \div 8$**

60 is immediately before 60 is 56, remainder 4

**Step 3: Calculate  $40 \div 8$**

40 is a multiple of 8,  $40 = 5 \times 8$ , so  $40 \div 8 = 5$

# Calculating a Decimal

Have a go at using the written method of short division to find the decimal equivalent of this fraction:

		0	2	8	6	7	
$\frac{2}{7} =$	7	2	0	60	40	50	

If the digit after the thousandths is 4 or less, then the thousandths digit stays the same.  
If the digit after the thousandths is 5 or more, then the thousandths digit rounds up.

**Step 1: Calculate  $20 \div 7$**  The multiple of 7 that comes immediately before 20 is 14,  $14 = 2 \times 7$ , so  $20 \div 7 = 2$  remainder 6

**Step 2: Calculate  $60 \div 7$**  The multiple of 7 that comes immediately before 60 is 56,  $56 = 8 \times 7$ , so  $60 \div 7 = 8$  remainder 4

**Step 3: Calculate  $40 \div 7$**  The multiple of 7 that comes immediately before 40 is 35,  $35 = 5 \times 7$ , so  $40 \div 7 = 5$  remainder 5

**Step 3: Calculate  $50 \div 7$**  The multiple of 7 that comes immediately before 50 is 49,  $49 = 7 \times 7$ , so the next digit after the thousandths is a 7.

# Calculating a Decimal

When we want to calculate a decimal equivalent of a fraction, we use the method of short division:

$$\frac{5}{6} =$$

		0	.	8	3	3	
6	5						

This decimal equivalent is recurring. This means that the same digit will repeat for infinity! To show this, we place a dot over the recurring digit.

$$\frac{5}{6} = 0.8\dot{3}$$

**Step 1: Calculate  $50 \div 6$**  The multiple of 6 that comes immediately before 50 is 48, so  $50 \div 6 = 8$  remainder 2

**Step 2: Calculate  $20 \div 6$**  The multiple of 6 that comes immediately before 20 is 18,  $18 = 3 \times 6$ , so  $20 \div 6 = 3$  remainder 2

**Step 3: Calculate  $20 \div 6$**  The multiple of 6 that comes immediately before 20 is 18,  $18 = 3 \times 6$ , so  $20 \div 6 = 3$  remainder 2

# Decimal

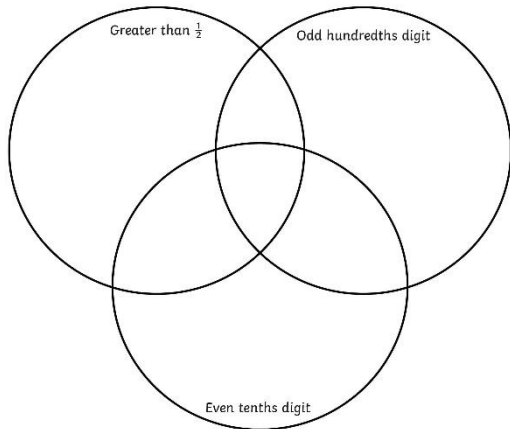

## Decimal Fraction Equivalents Number Sort

I can identify the value of each digit in numbers up to 3 decimal places.

Convert each fraction to its decimal equivalent, and then sort the decimal numbers into the correct place on the Venn diagram:

$\frac{1}{2} =$	$\frac{2}{7} =$	$\frac{3}{7} =$	$\frac{4}{7} =$	$\frac{5}{7} =$	$\frac{6}{7} =$	$\frac{7}{5} =$
$\frac{1}{9} =$	$\frac{2}{9} =$	$\frac{4}{9} =$	$\frac{5}{9} =$	$\frac{7}{9} =$	$\frac{8}{8} =$	$\frac{7}{10} =$

## Decimal Fraction Equivalents Number Sort

I can identify the value of each digit in numbers up to 3 decimal places.

Convert each fraction to its decimal equivalent, and then sort the decimal numbers into the correct place on the Venn diagram:

$\frac{3}{4} =$	$\frac{1}{6} =$	$\frac{2}{3} =$	$\frac{5}{6} =$
$\frac{3}{8} =$	$\frac{5}{8} =$	$\frac{3}{10} =$	$\frac{9}{10} =$

Convert each fraction to its decimal equivalent, and then sort the decimal numbers into the correct place on the Venn diagram:

$\frac{6}{7} =$	$\frac{5}{7} =$	$\frac{6}{7} =$	$\frac{2}{3} =$
$\frac{6}{10} =$	$\frac{7}{9} =$	$\frac{5}{8} =$	$\frac{7}{10} =$

Greater than $\frac{1}{2}$	Less than $\frac{1}{2}$

## Decimal Fraction Equivalents Number Sort

I can identify the value of each digit in numbers up to 3 decimal places.

Convert each fraction to its decimal equivalent, and then sort the decimal numbers into the correct place on the Venn diagram:

$\frac{3}{4} =$	$\frac{1}{5} =$	$\frac{2}{5} =$	$\frac{9}{10} =$
$\frac{1}{10} =$	$\frac{3}{10} =$	$\frac{7}{10} =$	

Convert each fraction to its decimal equivalent, and then sort the decimal numbers into the correct place on the Venn diagram:

$\frac{3}{4} =$	$\frac{1}{5} =$	$\frac{2}{5} =$	$\frac{5}{6} =$
$\frac{3}{8} =$	$\frac{5}{8} =$	$\frac{3}{10} =$	$\frac{7}{10} =$

Greater than $\frac{1}{2}$	Less than $\frac{1}{2}$

# Diving into Mastery

Dive in by completing your own activity!

1) This model shows that  $\frac{1}{2}$  is the same as  $1 \div 2$ .

Copy the diagram and draw place value counters in the empty boxes to show what happens when  $\frac{1}{2}$  is converted into a decimal.

2) Rewrite each fraction as a division calculation and use the short division method to convert each fraction to a decimal.

a) $\frac{5}{10} = 3 \div 5$	b) $\frac{2}{8} = 2 \div \dots$
$\begin{array}{r} 5 \ 3 \ . \ 0 \\ 10 \overline{) \phantom{00}} \end{array}$	$\begin{array}{r} 2 \ . \ 0 \\ 8 \overline{) \phantom{00}} \end{array}$
c) $\frac{6}{10} = 4 \div \dots$	d) $\frac{8}{8} = 5 \div \dots$
$\begin{array}{r} 10 \ . \\ 10 \overline{) \phantom{00}} \end{array}$	$\begin{array}{r} 8 \ . \\ 8 \overline{) \phantom{00}} \end{array}$

3) Use division to find the decimal equivalents for the following fractions. Give your answer rounded to three decimal places (3d.p.).

$\frac{2}{7} = \dots \div \dots$	$\begin{array}{r} \phantom{00} \phantom{00} \phantom{00} \phantom{00} \\ 7 \overline{) \phantom{0000}} \end{array}$
$\frac{8}{6} = \dots \div \dots$	$\begin{array}{r} \phantom{00} \phantom{00} \phantom{00} \phantom{00} \\ 6 \overline{) \phantom{0000}} \end{array}$
