

REMINDER

**My school is the leading school
of our city and region**

And because of this, many parents every year want that their children study in our school , but the school could not accept everyone due to the lack of places, and because of this, many parents decided to collect money to build a new place. But there was only enough money for the construction of a one store building. But the local government found out about this and allocated money for the construction of an additional building.

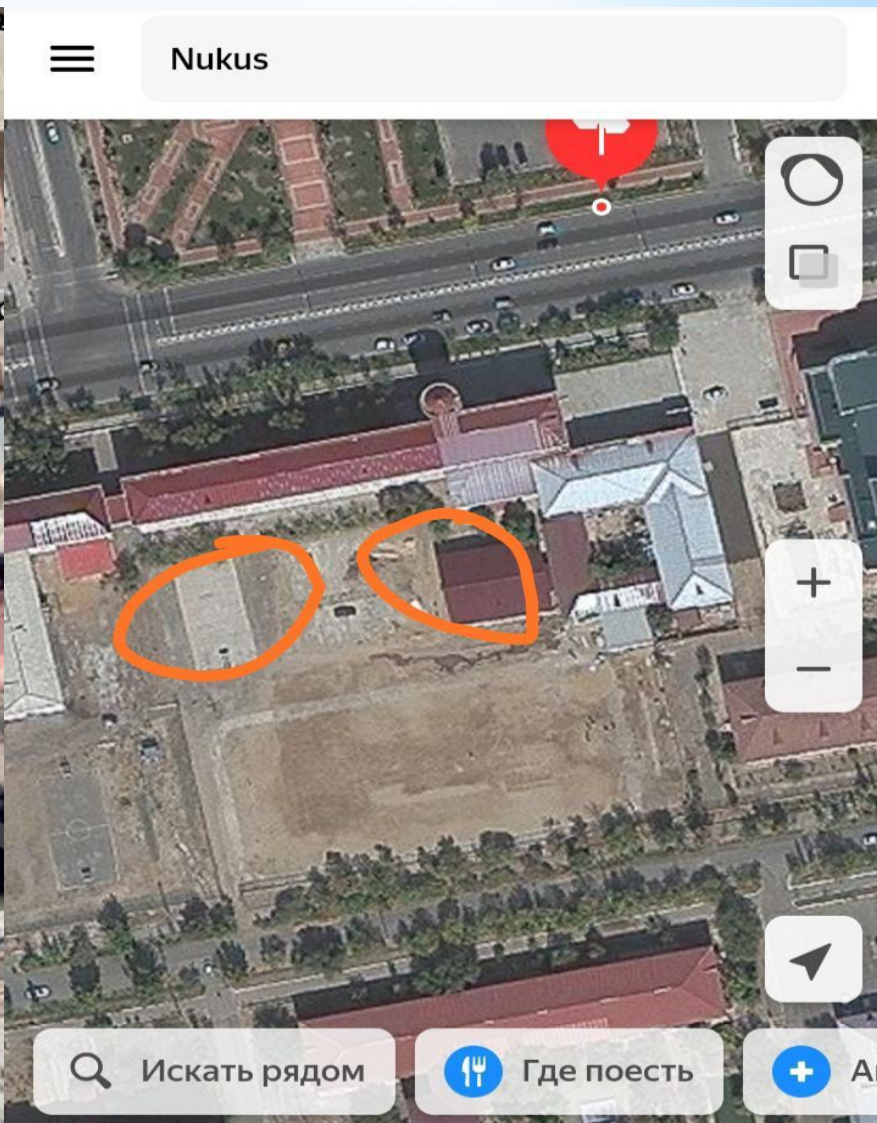

These are the statistics before construction

IN 2019

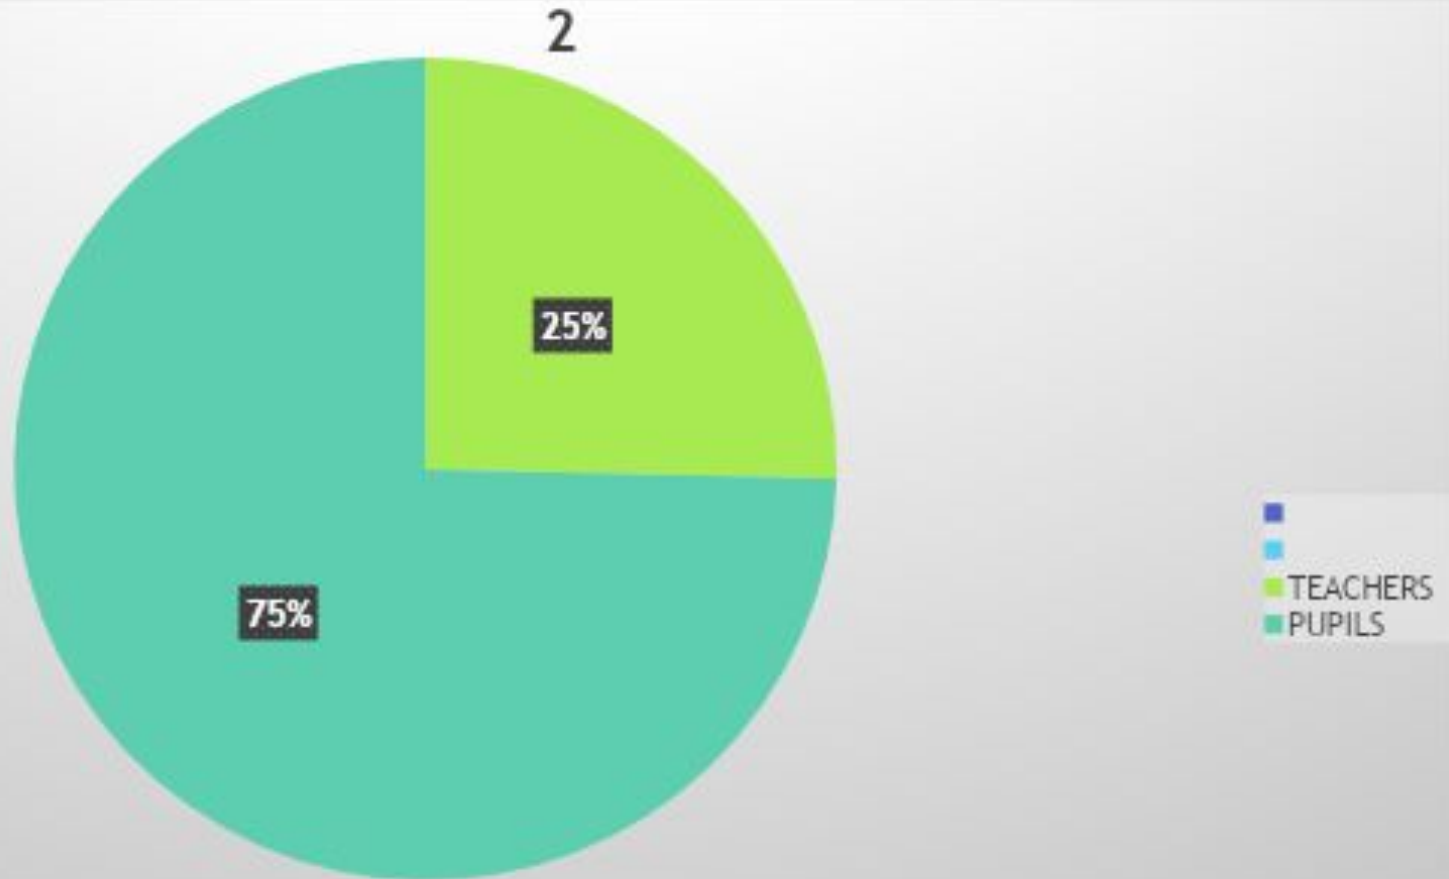

IN 2020

CONSTRUCTION ENDED IN 2021

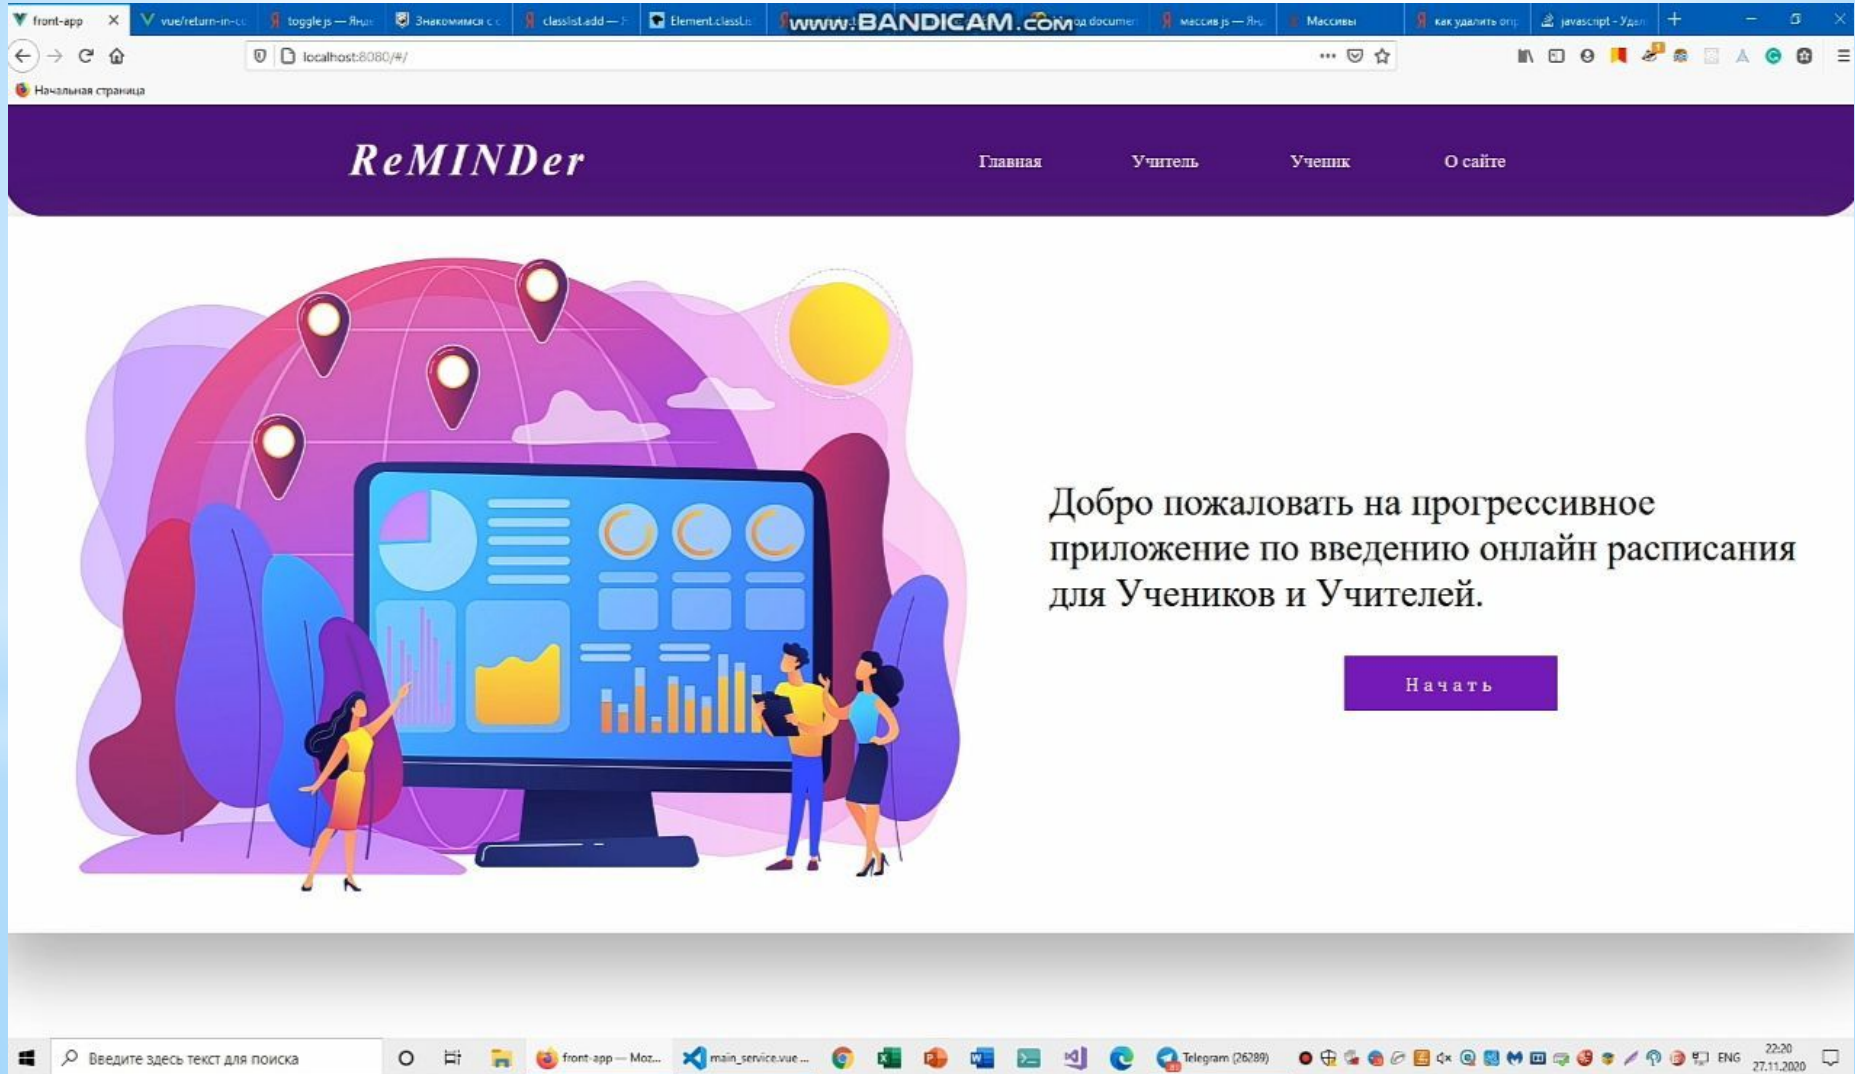

And because of this statistics have changed

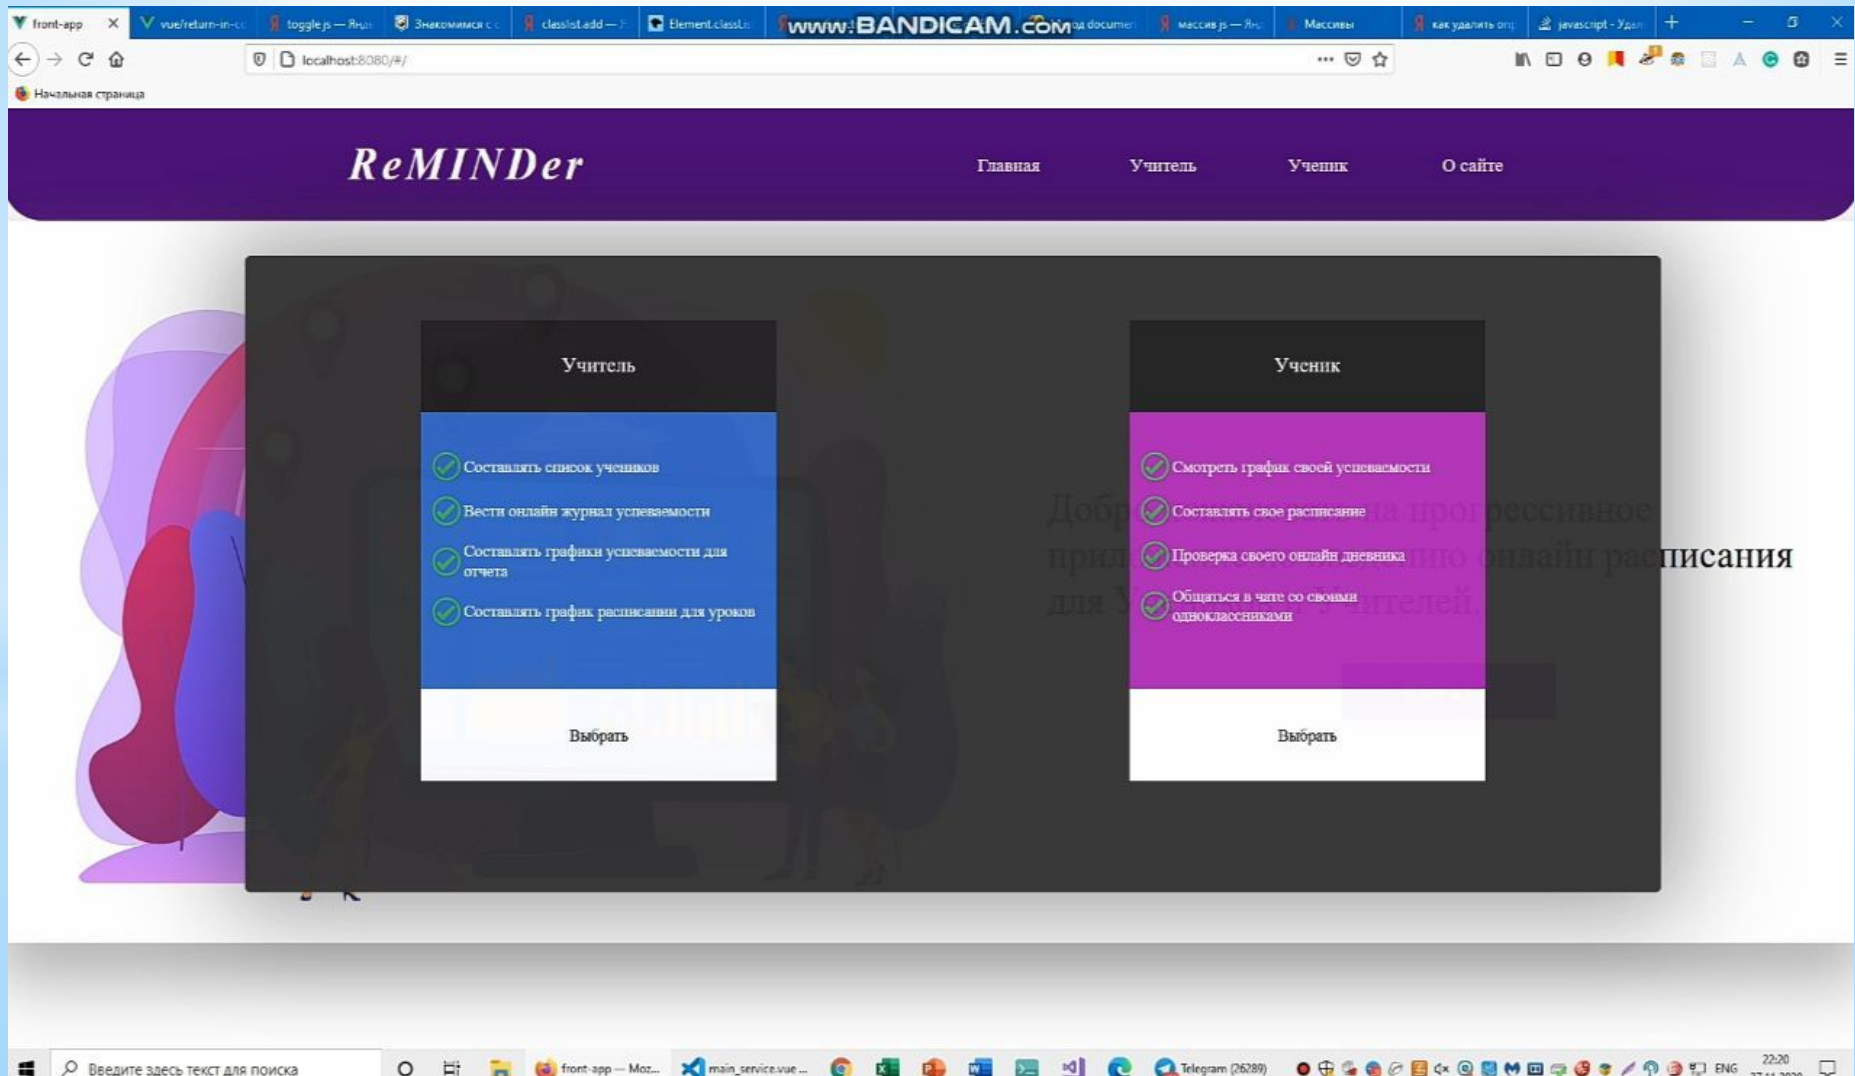

But after the construction of the new buildings, the problems did not diminish. The next problem was the lack of qualified teachers. Because of this, one teacher had 6 lessons a day. And teachers often get tired and headaches (memory problems)

**And because of this I
wrote to my cousin and
talked about it and he
said: <ok, we can do it>.
This app we did only for
my school and only
supports Russian**

This app we did with

**But in this all of our problems
will not be solved, and I with
my cousin will begin to make a
global version of this app, in
the global version. We will add
a lot of new chips, like a :**

Multi-language

SLEEP REGULATOR

If the user connects his smart watch to the program and the program will study your sleep and daily routine and, based on this, will give advice on what to eat for breakfast, lunch and dinner.

A MAP

If there are things on your to-do list for which you have to travel around the city, then the program will find the shortest path.

HEALTH FIT

BONUSES

**And at the end of each day,
the program will study your
day and give out the result of
your day: productive, normal
or not productive. And based
on this, it will issue bonuses
that you can collect and
exchange for your needs at the
end of the month.**

Bonuses will be issued depending on your age category, if the user is 10-15 years old, then they can be used in stationery stores for school needs, and if you are older, then they can be used as a discount in grocery, household stores, and in restaurants something like family dinner at a restaurant after a good productive month. I think that all this will motivate people a little to be more productive.

**The main idea of this program
is to remind everyone that
our time is not endless and
we should spend it useful
and right instead of
short-term entertainment.**
