

# INVENTIONS OF THE FUTURE

BY ZARETSKY DMITRY AND SALNIKOVA ALEXANDRA

POSSIBLE BUT NOT  
NECESSARY

# PORTABLE STANDING REST HOLDER

It's a walking stick which you can lean your chin to rest. But this becomes useless on the subway, because when transport is turning, the cane will just fall down, and so will you too.

# OPEN RUBBER BOOTS

We all know what rubber boots are, but there are also such rubber boots without a sock in the world. Why do you need them if you get your feet wet in them?

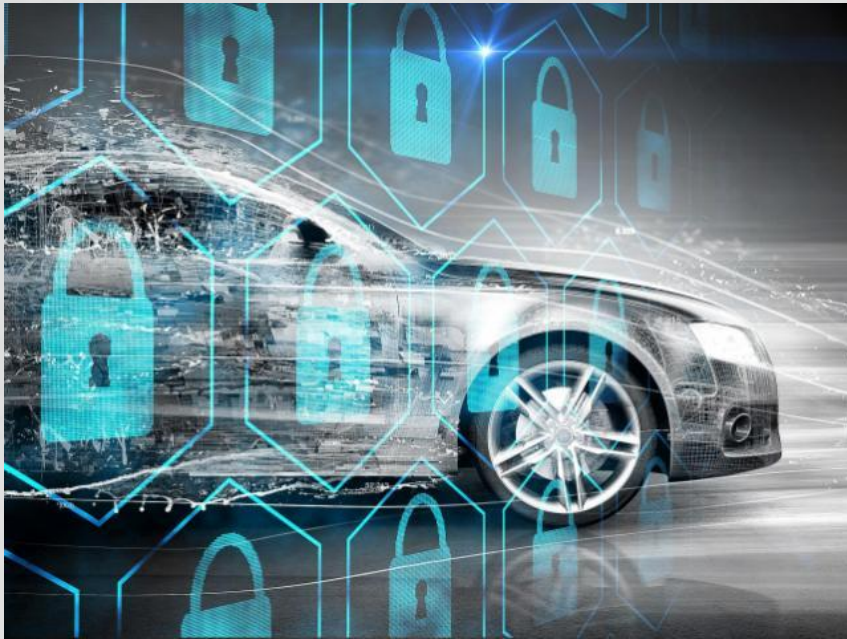

# COFFEE MAKER WITH A SPOUT ON THE HANDLE SIDE

This is the most useless thing in the world, because if you even want to pour coffee, it will spill past the cup.

POSSIBLE AND VITAL

# CARS CONNECTED TO THE COMMON NETWORK

It is quite possible to invent this, because we are learning how to program. We want to connect cars to the same network, so that there are no accidents during emergency braking.

# A HEALTH MONITORING RING

They are like fitness bracelets, but better, because they take up much less space, but have as much functionality as a bracelet.

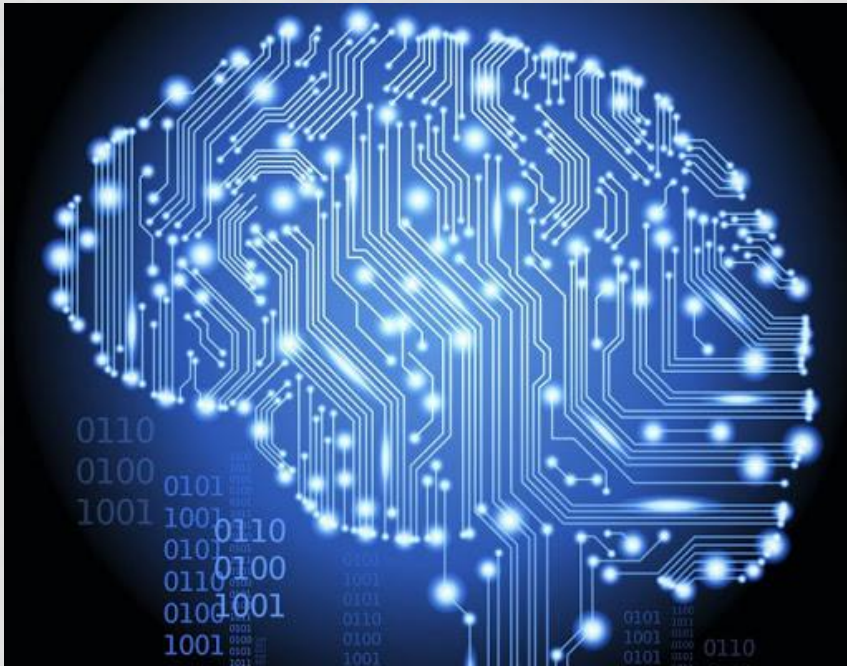

# DEVICE FOR CONVERTING WASTE PAPER INTO CLEAN PAPER

It's very useful thing to protect nature. We want chemists to create a substance that can erase ink so that paper becomes reusable.

IMPOSSIBLE AND VITAL

# THE DIGITIZED MIND

In our mind, it's like a memory card that preserves all of your past life (memories and knowledge). It can be inserted into a new body without losing anything from the past.

# BABY DIAPERS WITH ODOR NEUTRALIZER

It's very convenient and practical thing for young moms and dads. But it is unlikely that such an invention will ever be realized.

# JETPACK

It's very useful thing, with the help of which you can get to some place quickly. After all, you can fly around obstacles such as trees, houses, etc. But it is very difficult to implement such a thing.

**THANK YOU FOR  
ATTENTION!**
