Handwritten physics notes on a blackboard background, covering various topics in mechanics, optics, and electromagnetism. The notes include:

- Mechanics:** Simple pendulum, projectile motion, relative motion, circular motion, and energy conservation.
- Optics:** Interference (Young's experiment), diffraction (single slit, double slit), and thin film interference.
- Electromagnetism:** Capacitors, inductors, AC circuits, and magnetic fields.
- Mathematics:** Trigonometric identities, vector analysis, and calculus applications.

Key diagrams include a lens system, a double-slit interference setup, and a thin film interference diagram.
