In Great Britain it is never too hot or too cold for work or play in the open air. This is because of the sea, which keeps the island warm in winter and makes the air cool in summer.

Thanks to the mild climate there are a lot of evergreen plants in Great Britain. And the country is always green. But the lack of sunshine is the reason why the cultivation of grain crops is difficult. Grass grows all the year round.

It provides fodder for cattle.

But the worst thing about the climate in Great Britain is the thick fog they so often have in autumn or winter. In London it is sometimes so thick that cars may run into one another.
