TOYOTA CAMRY 3.5

Company history

In 1934, the company produced its first Type A engine, which was used in the first model of the A1 passenger car in May 1935 and in the G1 truck in August 1935. Production of the AA passenger car began in 1936. Early models resembled pre-existing Dodge Power Wagon and Chevrolet models. In Japan itself, the cars of this manufacturer were the best-selling. So, in 1992, Toyota accounted for 40% of cars owned by the population.

Toyota in Russia

The most popular models of the company on the Russian market: Toyota Camry, RAV4, Land Cruiser Prado and Land Cruiser 200. Toyota Land Cruiser 200 ranks first in popularity on the Russian market in the segment of premium full-size SUVs: the share in the segment is about 45%. In January 2021, Toyota announced that it was recalling 82.4 thousand cars in Russia. On March 1, 2022, the company announced the suspension of business in Russia, including both the production and supply of new cars and the supply of spare parts. On March 7, all 26 Japanese employees working in Russia were recalled to Japan.

Toyota Camry

The name "Camry" comes from the Japanese phonetic notation of the Chinese character 冠 (kanmuri), which has the meaning "crown". In Russia, along with other cars of the company, the model enjoys stable consumer demand.

Years of production 1982 — present

Class-Family class, Business class

Body type 4-dv. sedan (5 seats.)

Toyota Camry XV10

First generation

This generation of Camry was produced in a sedan body from 1991 to 1996 under the Toyota Scepter brand. Since 1992, it has also been produced in a station wagon body. Since 1993, it began to be produced for export under the Toyota Camry brand and a situation turned out when two different Camries existed at the same time. A Camry for the Japanese market and a larger one for export.

Restyling

Late edition

It has been produced since 2017, sales start in the Russian Federation on April 2, 2018. The car received the previous 2.0 and 2.5 engines as well as an updated 3.5-liter "six" in combination with an 8-band "automatic". The 3.5 engine is equipped with a combined injection type, specially for the Russian market, it is deforced to 249 hp.

Technical specifications

Toyota Camry 70 TRD is equipped with an atmospheric V6 3.5 petrol-type power unit. The maximum torque is reached at 4700 rpm and is 362 Nm. The maximum power of the internal combustion engine is 301 hp at 6600 rpm. An eight-band automatic transmission is installed, with the function of manual operation by means of steering wheel switches. This combination provides a maximum speed of more than 220 km/h. And acceleration to one hundred kilometers per hour is carried out in less than seven and a half seconds. The indicator of gasoline consumption in a mixed cycle is no more than nine liters per hundred kilometers.

Car interior

Sports seats with leather upholstery are installed for the driver and front passenger. They are equipped with lateral support, a position controller in various directions, which contributes to a comfortable.
