

DROUGHT

Prepared Poznyak Anya

- The drought - the lack or absence of rain for a long time at high temperatures reducing humidity, thus disappearing moisture reserves in the soil.

- Drought can cause significant damage to farmers and ordinary people who grow agricultural culture. Scientists predict that the frequency of droughts and global such increase since because of rising temperatures worldwide climate change.

- 1) Do not pollute the water
- 2) Do not clog the environment is
- 3) Not cut down forests and the need to protect nature

The End
