A close-up, high-speed photograph of water splashing and bubbling. The water is captured in mid-air, creating a dynamic scene with many small bubbles and larger droplets. The background is a soft, out-of-focus light blue. The overall tone is clean and fresh, with a focus on the natural movement of water.

One of the main environmental problems is water pollution. This is exactly what will be discussed.

A composite image featuring a dynamic splash of water at the top, with numerous bubbles and droplets falling towards a view of the Earth from space at the bottom. The globe shows the Americas and parts of Europe and Africa, with swirling white clouds. The overall color palette is dominated by blues and greys, with the natural colors of the Earth's surface providing contrast.

The surface of the earth is 75% water. Thanks to it on our planet there is life  
Water is important for living organisms for two reasons:

# The first reason

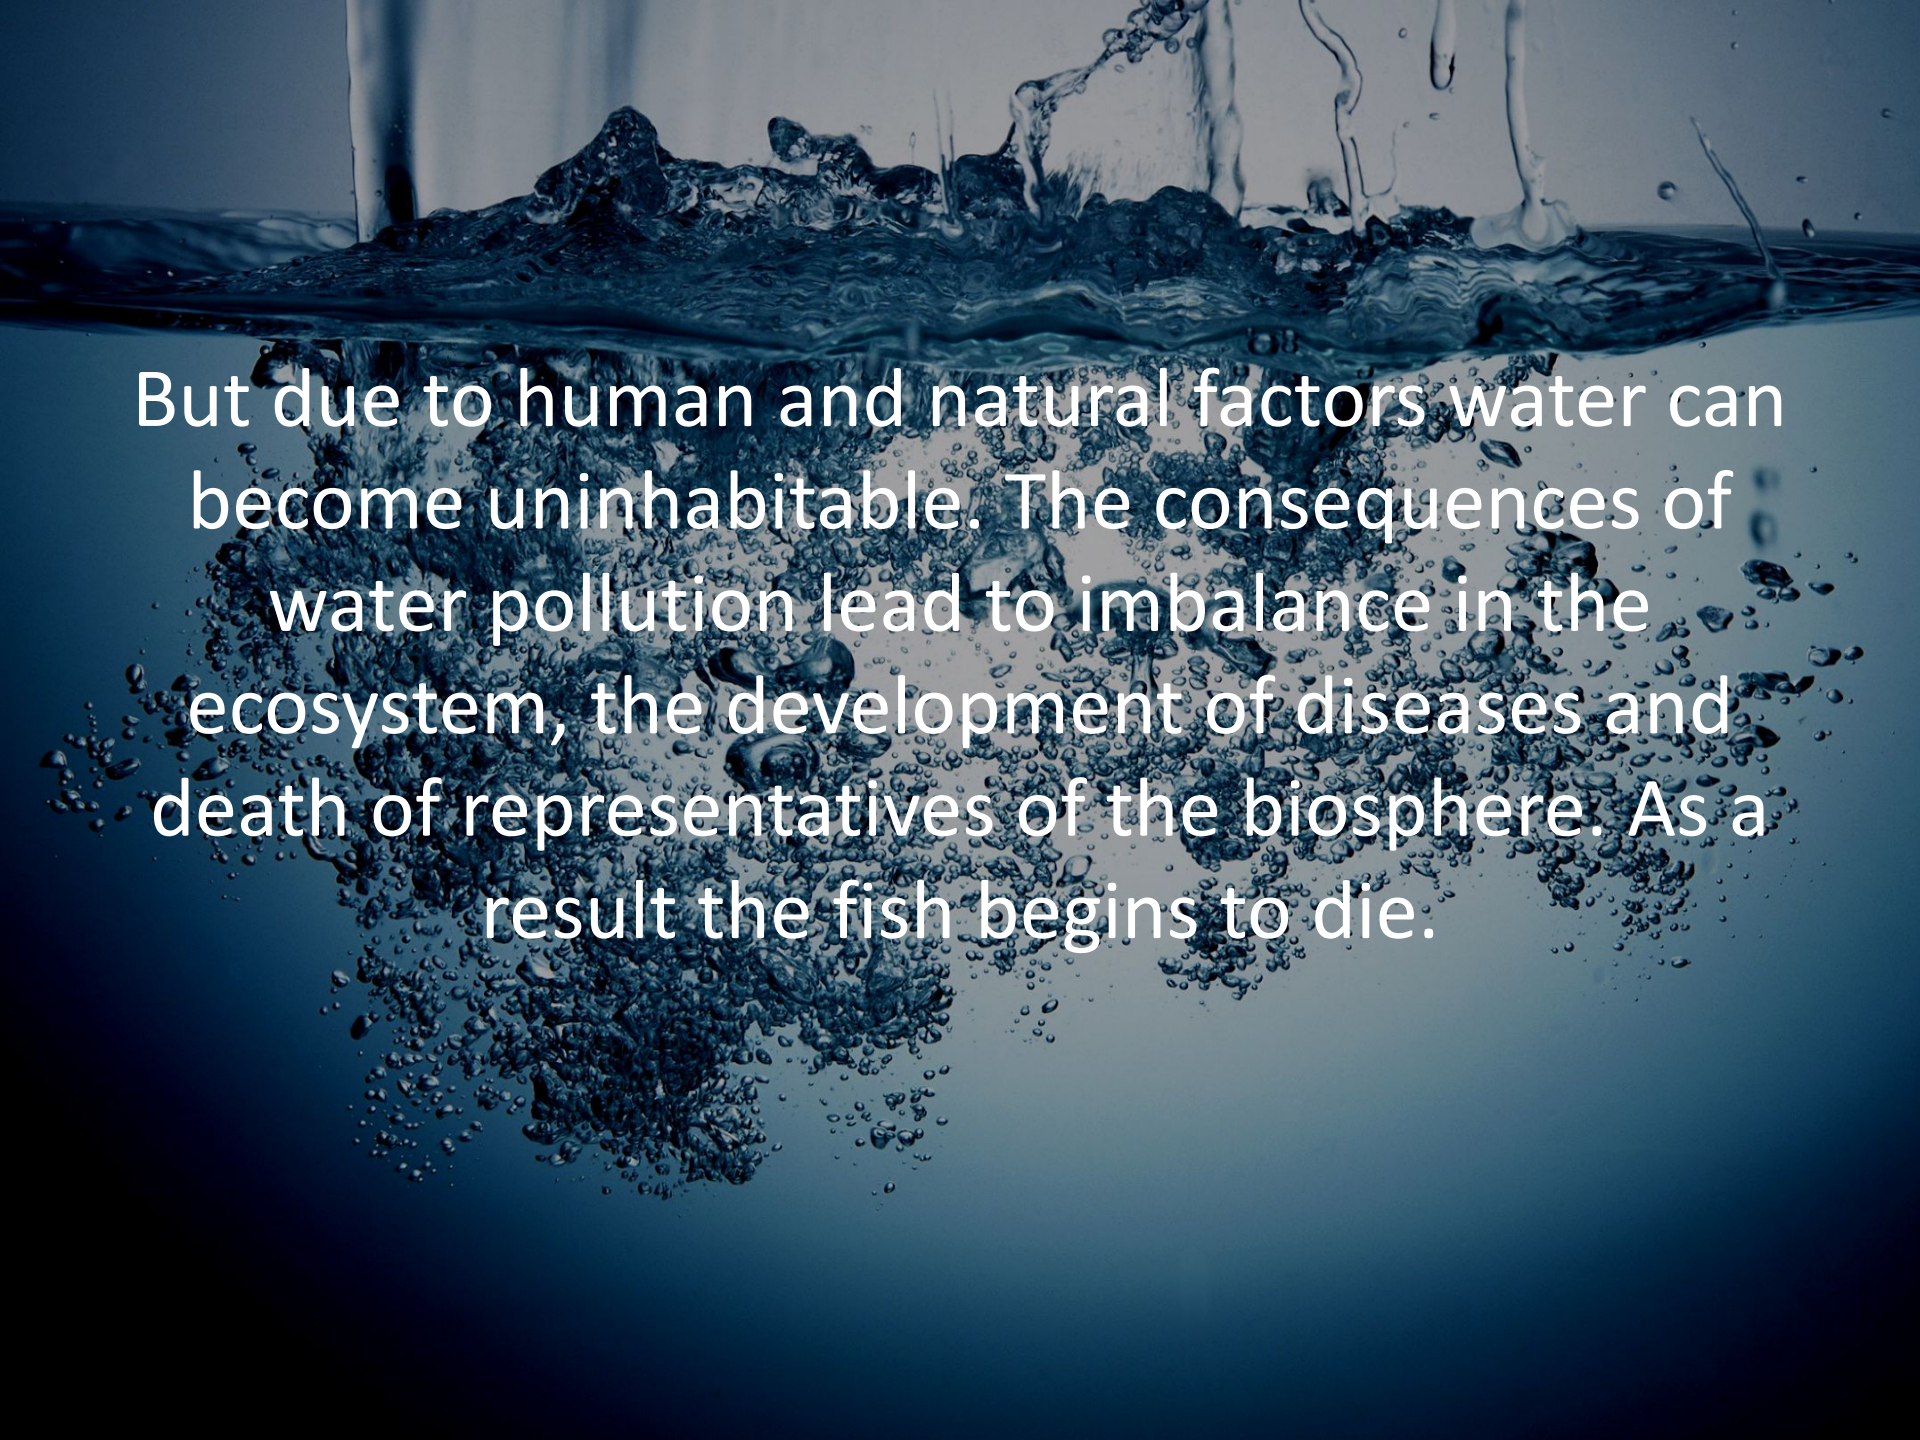

Water is an essential component of living cells. It underlies many of the processes that occur in living organisms.

# The second reason

For many organisms it also serves as a habitat. For example, you can take fish. From water, with the help gills, they receive oxygen for enrichment them blood.

A close-up photograph of water splashing and bubbling. The water is dark blue, and the background is a lighter blue. The water is in motion, creating a dynamic scene with many small bubbles and larger splashes. The text is overlaid on the water, centered horizontally and vertically.

But due to human and natural factors water can become uninhabitable. The consequences of water pollution lead to imbalance in the ecosystem, the development of diseases and death of representatives of the biosphere. As a result the fish begins to die.

A close-up, high-speed photograph of water splashing and bubbling. The water is captured in mid-air, creating a dynamic scene with many small bubbles and larger droplets. The background is a soft, out-of-focus light blue, which makes the darker blue water stand out. The overall mood is clean and refreshing, yet the text overlay adds a sense of urgency and concern.

Water pollution is a serious problem of mankind,  
but water can still be saved. First of all you  
need to learn to take care of natural resources
