

Russian Resources

Russian BioResources LLC is a manufacturer and bulk supplier of Artemia Salina products in the Russian Federation with a production facility in the south of the country.

The company is a comprehensive enterprise with a complete production cycle from breeding Artemia Salina to selling finished products.

Bolshoye Yashaltinskoe Lake

We have been in operation since 2010 and currently manage several lakes with a total area of more than 10 000 hectares and constantly expanding water area for breeding Artemia Salina. Among the lakes under our company, Bolshoye Yashaltinskoe Lake (The Big Yashalty Lake) is the biggest and most productive. Today, Russian Bioresources successfully conducts its business and in 2019 the company is planning to produce more than 100 tons of Dried Artemia Cysts and 300 tons of bloodworm (Chironomid).

All lakes under our watch are located in ecologically clean areas with a good distance from any plants or hazardous facilities thereby allowing us to manufacture products free from pollution and pathogens.

The application of up-to-date equipment enables us to guarantee first class quality products.
