

New technologies will transform the global markets - or will they?

The Youth Forum 2021

The Image of the Future we want: The Horizon - 2100

Leena Ilmola-Sheppard

Question

- How technology will change the structure of the global markets?
- What are the key uncertainties?
- Two examples:
 - Platform ecosystems
 - Energy transition

A few days ago, I joined several thousand global health practitioners, researchers, activists and policymakers at a conference in Bangkok titled "Making the World Safe from the Threats of Emerging Infectious Diseases."

The audience was abuzz about a new **study** by a team of economists—including former U.S. Treasury Secretary Lawrence Summers—that shows the staggering economic costs of a future pandemic. They estimate the annual losses from a moderate to severe pandemic would be about \$500 billion, or 0.6 percent of global income. That's similar to the annual costs of global warming, double the cost of natural disasters and five times the cost of terrorism.

These new estimates are much higher than previous studies have suggested, and they point to the need for us to step up our efforts to prepare for the next pandemic. So it was troubling to learn that the Centers for Disease Control and Prevention (CDC) is planning to scale back efforts to prevent those very diseases.

The Economist

THE ECONOMIC toll of the covid-19 pandemic is incalculable. But let's try anyway. A useful starting point is the semi-annual *Global Economic Prospects* report released this week by the World Bank. It calculates that the world economy probably shrank by 4.3% in 2020, a setback matched only by the Depression and the two world wars. But this dramatic figure still understates the cost. It measures the world economy's fall from where it was before the pandemic, not from where it would have been had the virus not spread.

Jan 2020

To calculate that bigger fall, economists need an estimate of how global GDP might have evolved in the absence of covid-19. One simple baseline is the World Bank's projection released this time last year, when it was still blissfully unaware of the lurking viral threat. Back then, it expected global GDP to expand by 2.5% in 2020 to \$86trn. Compared with that figure, the shortfall of global GDP last year was probably more like 6.6%. That is equivalent to about \$5.6trn (at the market exchange rates and prices prevailing in 2010, which the bank uses for analytical convenience).

Rise in IoT And Machine Learning Is Driving Industry 4.0 Market

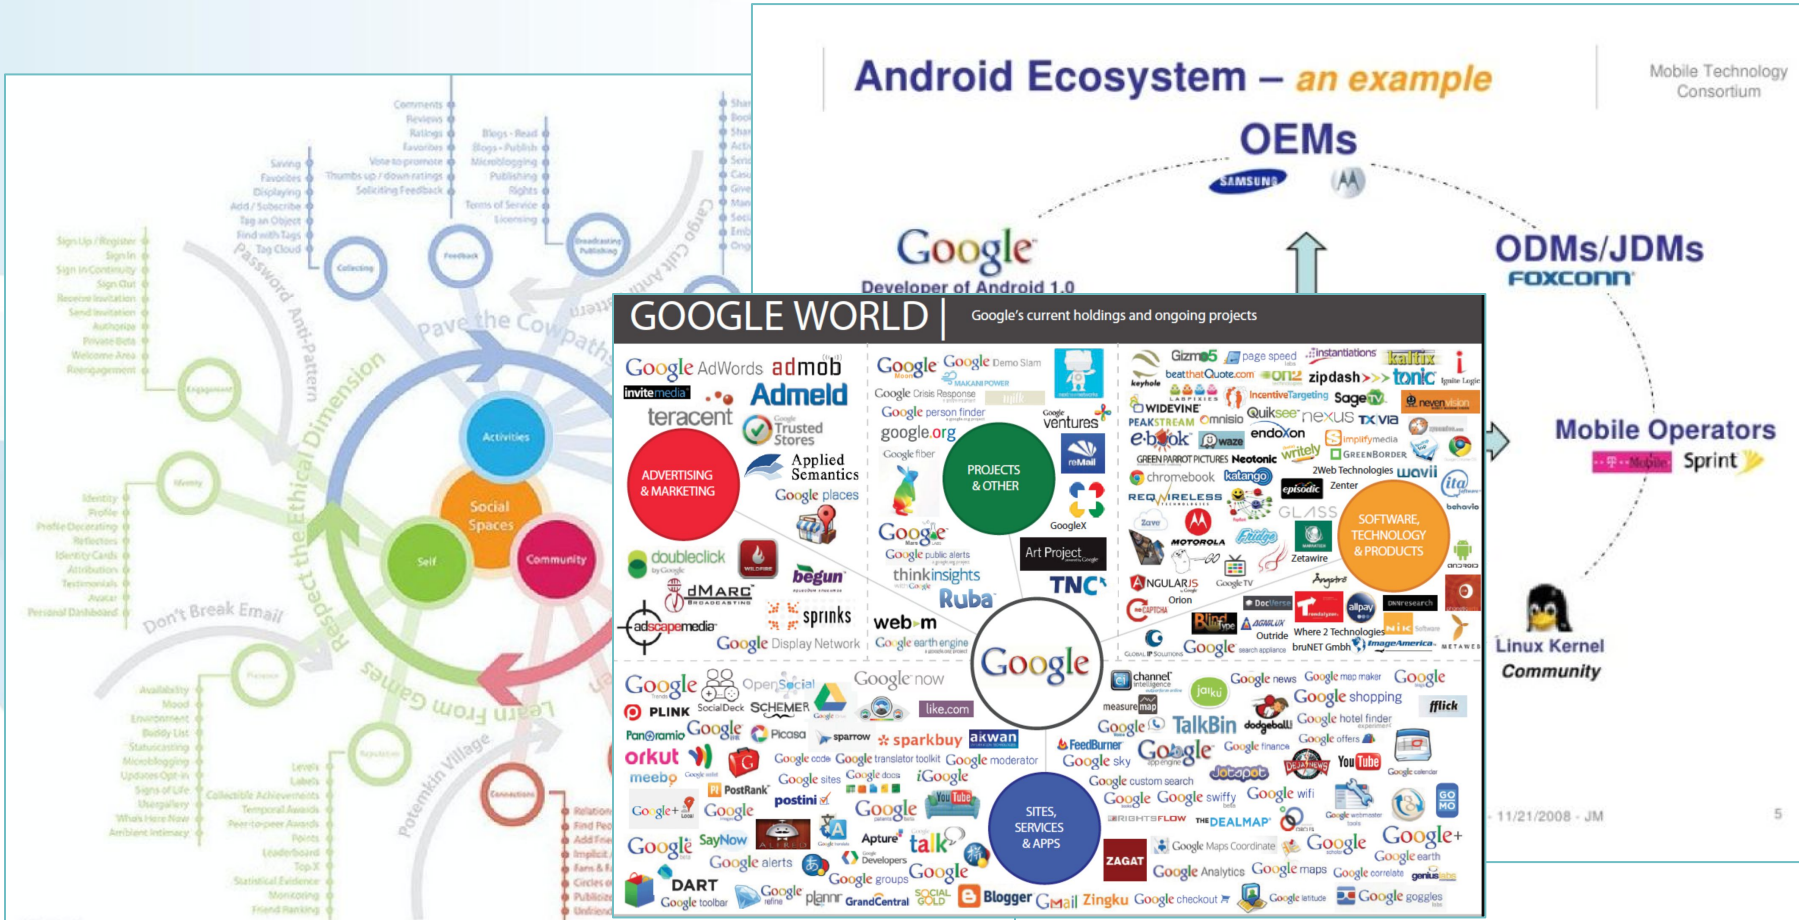

“Industry 4.0 Market”

Rapid adoption of Internet of Things and Machine Learning in the steady shift towards robotics and industrial automation are some key factors fueling market revenue growth

Industry 4.0, also refer to as fourth industrial revolution that focuses on deep learning, automation, machine learning (ML), Artificial Intelligence (AI), edge computing, digital twin and data analytics. **Industry 4.0** revolutionize the way business operates by offering access to real-time insights across products, processes, partners, and people. It connects physical with digital for better control of business operations.

The global industry 4.0 market is expected to register fastest revenue growth rate over the forecast period due to rapid adoption of Internet of Things (IoT), cloud computing and analytics into production facilities. The increasing demand for industrial robotics in manufacturing units to reduce production costs is resulting in the advent of additional opportunities for further

Open platform ecosystems and resilience

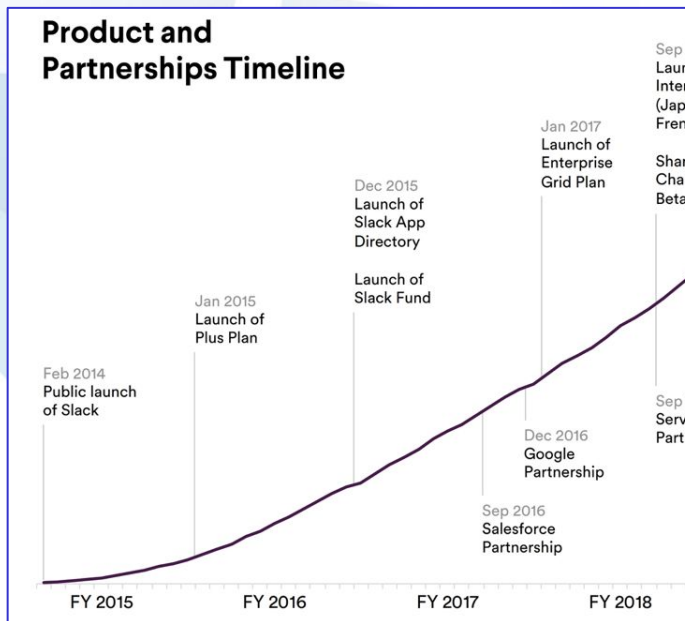

- ...from Complex Adaptive Systems perspective
- Uncertainties such as user behavior, technology, institutional environment

This screenshot shows the Slack app directory interface. At the top, there are navigation links: "Why Slack?", "Solutions", "Resources", "Enterprise", and "Pricing". Below this, there are two main sections. The first section is titled "Run a poll to collect ideas" and features the Slack logo and a "works with" section with a right-pointing arrow. The second section is titled "Send email to Slack" and also features the Slack logo and a "works with" section with a right-pointing arrow. Below these, there are two more sections. The first is titled "Search your company's internal wiki" and features the Slack logo and a "works with" section with a right-pointing arrow. The second is titled "Loop in subject matter experts to resolve customer support issues" and features the Slack logo and a "works with" section with icons for Zoom, a headset, and a document, and a right-pointing arrow.

This screenshot shows the Slack App Directory interface. At the top, there is a search bar labeled "Search App Directory" and navigation links: "Learn", "Browse", "Manage", and "Build". Below this, there is a list of integrations, each with an icon, a name, a description, and a right-pointing arrow. The integrations listed are: "PagerDuty" (Spend less time reacting to incidents and more time developing for the fut...), "Slack for Outlook" (Send emails into Slack to discuss them with your teammates.), "Disco" (Disco makes it easy to celebrate your company culture and values), "Workstreams" (Results-driven task manager / Agile Kanban board), "Microsoft OneDrive" (Search, share and preview your OneDrive & SharePoint Online fil...), "Salesforce" (Search and view information from Salesforce in Slack.), and "Workday" (Workday For Slack).

Open platform ecosystem

- No centralized control, anyone can join
- Network externalities grow exponentially ; fast growth,
- Integrated innovation

Adaptation..

- Open platform ecosystems are complex
 - Law of requisite variety $>$ same level of complexity, complexity mismatch
- Interaction is defining what is happening next
 - self-organization of structure and output
- Automatic feedback loops
