

1. Rear PCIe card bracket
2. VGA cutout(need VGA module installed for VGA display support)
3. Rear USB cutout
4. Rear HDMI cutout
5. HDD Bracket
6. LCD

1. IO Drawing was from customer, rectangle represent Fiber cage + LED I guess. But we will create the cutoff like A, we need customer to check the dimensions otherwise interference will happen.
2. Customer needs switch for DC PSU?

Please check the protrusion length of GPS connector is sufficient for current design. Or we need to make the cutoff larger for GPS antenna installation?
