

THE INTERNET

Made by YV POSPELOVA

A hand-drawn illustration titled "The Internet of THINGS". At the center is a stylized Earth globe with blue oceans and green continents. A thick black line representing a network cable or fiber optic path winds around the globe, connecting it to various smart devices and objects. Above the globe, a person sits at a desk with a computer, their head tilted back as if communicating; a speech bubble containing two vertical bars (II) is above them. To the left, a house is labeled "CONNECTED OBJECTS" below it, with a location pin icon above it. A car is also shown nearby. Below the house, a drone flies with the label "3km range" next to it. On the right side of the globe, a person is depicted wearing a smartwatch and holding a smartphone. Further right, a blue t-shirt and a pair of headphones are shown. A small potted plant with green leaves is growing from the top of the globe, with a speech bubble above it. At the bottom of the globe, there's a red circular button with a white plus sign. The text "CONNECT THE WORLD" is written at the very bottom of the illustration. The overall style is whimsical and illustrative, emphasizing the connectivity of everyday objects.

The internet was developed in the United States by the "United States Department of Defense Advanced Research Projects Agency" (DARPA).

It was first connected in October, 1969, and was called **ARPANET.**

The World Wide Web was created at CERN in Switzerland in 1990 by a British (UK) man named Tim Berners-Lee.

Today, people can pay money to access the internet from internet service providers. Some services on the Internet cost nothing to use. Sometimes the people who offer these free services use advertising to make money from them.

The alternative (other) name, "net" came from "inter(net)".

Few words about the Microsoft:

In 1975 two friends: Bill Gates and Paul Allen started Microsoft and very soon it became a business success. In 1980, Gates bought a small company which produced an operating system called DOS. He made some changes to it and renamed it MSDOS. He sold the rights to use this system to IBM. Since 1980 MSDOS has been the standard operating system for all PCs. Microsoft has also developed such well – known programmes as Windows, Excel and Internet Explorer.
