

# Intelligent systems in construction

A conceptual image with a blue background. A human hand is shown from the palm up, holding a digital 3D model of a skyscraper under construction. The building is composed of wireframe and solid blue/grey blocks. Surrounding the building are several floating digital screens displaying various data visualizations: a large tablet with a complex interface, a smartphone with a line graph, a desktop monitor with multiple charts, and another tablet with a 3D architectural rendering. A red line, resembling a stylized orbit or a data path, winds around the building and the screens. The overall theme is the integration of intelligent systems and data into the construction industry.
