

A photograph of a snowy, mountainous landscape. The foreground is dominated by large, sculpted snowdrifts and ice formations, some with deep shadows and others catching the light. In the background, snow-covered mountains rise against a clear, pale blue sky. The overall scene is bright and cold, typical of a high-altitude or polar environment.

**Can you guess what plants  
and animals belong to  
Antarctica?**

# Polar bear ❌

Polar bears live in the Arctic, on ice-covered waters.

# Emperor Penguin

Emperor Penguins can dive deeper than any other bird.

## Snailfish

The snailfish is poorly studied and few species are known.

# Snowy owl ❌

Snowy owls are native to the Arctic regions of North America.

**Fur seal**

Fur seals can be  
up to 2 metres  
long.

# Snow leopard

The leopard is native to the mountain ranges of Central and South Asia.

# Reindeer

Reindeer is native to Arctic, tundra, northern regions of Europe.

# Dwarf birch ❌

The birch is found mainly in the tundra of the Arctic region.

## Fire moss

Its colour ranges  
from yellow-green  
to red.

# Whalebone whales

Whales have  
many teeth.
