

Harpa Concert Hall and Conference Centre

Harpa was designed by the Danish firm Henning Larsen Architects in co-operation with Danish-Icelandic artist Olafur Eliasson. Construction started in 2007 and opened in 2011.

Harpa has received recognition for its stunning exterior design, which was inspired by the crystallised basalt columns that are commonly found throughout Iceland's natural landscapes.

The Centre features an arrival- and foyer area in the front of the building, four halls in the middle and a backstage area with offices, administration, rehearsal hall and changing room in the back of the building.

The three large halls are placed next to each other with public access on the south side and backstage access from the north. The fourth floor is a multifunctional hall with room for more intimate shows and banquets.

The image shows a close-up, low-angle view of the Harpa concert hall in Reykjavík, Iceland. The building's facade is composed of numerous golden, geometric panels that create a shimmering, textured effect. The panels are arranged in a pattern that resembles a honeycomb or a series of interlocking shapes. The lighting is warm, suggesting either sunrise or sunset, which enhances the golden hue of the panels. The sky in the background is a clear, pale blue. The text is overlaid on the right side of the image, providing a detailed history of the building's construction and naming.

Harpa was originally part of a redevelopment of the Austurhöfn area in Reykjavík, which was partially abandoned when the 2008 Icelandic financial crisis took hold. Construction started in 2007 but was halted with the start of the financial crisis. The completion of the structure was uncertain until the government decided in 2008 to fully fund the rest of the construction costs for the half-built concert hall. For several years it was the only construction project in existence in Iceland. The building was given its name on the Day of Icelandic Music on 11 December 2009, prior to which it was called The Reykjavík Concert Hall and Conference Centre.

A photograph of a modern building with a complex, multi-faceted facade made of glass and metal panels. The building is illuminated from within, and its lights are reflected in a body of water in the foreground. The sky is a deep blue, suggesting dusk or dawn. The text "THANK YOU" is overlaid in the center of the image.

THANK YOU
