Ant colonies are highly organized societies of insects that live together and cooperate for the benefit of the colony. They are found in a wide variety of environments, from deserts to rainforests. The colony is headed by a queen, who is responsible for laying eggs and caring for the young. Other ants in the colony have different jobs, such as foraging for food, building and maintaining the nest, and defending the colony from predators.

Ants are highly organized insects that live in colonies. They have a complex social structure with different roles for different ants, such as workers, soldiers, and queens. Ants are found in a wide variety of environments, from deserts to rainforests.
