Concept of artificial languages.

- Artificial languages are languages with special grammar and vocabulary, what people create and use for:

It is the flag of artificial languages:

1

- Coding or other work with data and computers. For example, «Python» is a very popular constructed IT language with wonderful possibilities.

2

- Easy communication with foreigners, who are know the same artificial language as you.
Legendary «Esperanto» is the best example.

3

- Making the Universes in books/films /games/fairy tales. For example, NA'VI language was constructed by one person for movie «Avatar».

4

- Military or secret agency communication. Some ciphers are artificial languages too. Morse code is a good example.
