

The background of the slide is a dense field of stylized coronavirus particles. These particles are depicted as spherical entities with a textured, bumpy surface and numerous thin, hair-like projections (spikes) extending from their periphery. The color palette for these particles is primarily red and blue, with some appearing as bright red and others as a lighter, translucent blue. They are scattered across the entire frame, creating a sense of a microscopic environment.

# *How to protect yourself from coronavirus COVID-19?*
