

Immunity

Выполнил: Игнатова С.В 103ф

Immunity - the ability of the immune system to rid the body against genetically foreign objects.

Immunity is divided into
innate and adaptive.

Adaptive (acquired)

It is divided into active and passive.

*** Acquired active immunity occurs after suffering illness or after administration of the vaccine .**

*** Acquired passive immunity develops when introduced into the body ready-made antibodies in the form of a serum , or transfer them to the newborn with mother's milk or intrauterine way**

**The innate immune which is
given to the child birth**

**Conclusion: your health should be
protected and supported! better
support for the immune system-
healthy Eating, vitamins
And physical exercise.**
