Introduction

This article analyzes the place of trade in the Russian economy, its dynamics of development. Different approaches to the definition of trade are considered. Calculations are made based on real statistical economic indicators.

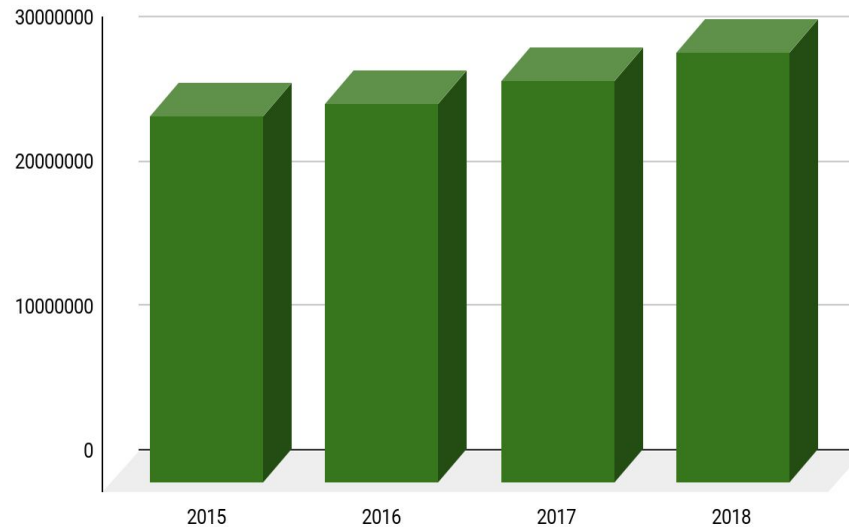

Key words: trade, dynamics, decline, growth rate, trade turnover, career, economy.

Key indicators of business entities in retail and wholesale trade

Indicators, units rev.	Indicator values			
	2015	2016	2017	2018
Retail trade turnover of trading organizations, RUB mln	25358189,2	26298361	27879584,6	29799468,9
The number of retail business entities (individual entrepreneurs, thousand units)	1418,7	1384,7	1294,3	1258,2
The number of people employed in wholesale and retail trade, people	13684	13633	13685	13669

Retail trade turnover of trading organizations

Having calculated the growth rates of retail trade turnover of trading organizations for the period from 2017 to 2018 based on the data in Table 1.1, the growth rate is more than 100%, namely 106.8%, therefore, the final value has increased in comparison with the initial one, i.e. there is an increase in the indicator. This means that sales revenue has increased over the previous year. The growth of this indicator can be clearly seen in the picture.

Conclusion

Trade in the Russian Federation is developing dynamically, there is both growth and decline in various economic and statistical indicators, which is associated with the socio-economic development of the country. Consequently, trade does not stand still. Its development as the largest sector in the service sector cannot fail to attract attention.
