

The most attractive mathematical formulas

Work performed:
Artemov Stanislav
Stepanova Alexandra
Group №04503

Neuroscientists from the UK conducted an experiment in which 15 mathematicians were asked to evaluate the beauty of mathematical formulas by offering them a list of 60 pieces.

As discovered by neuroscientists, viewing beautiful formulas, from the point of view of mathematicians, evokes a response in the prefrontal cortex of the brain responsible for complex cognitive functions and emotions.

1. Fermat's grand theorem

$$a^n + b^n = c^n, \quad n > 2$$

2. Basic Trigonometric Identity

$$\cos^2 \theta + \sin^2 \theta = 1$$

3. The Gauss-Bonnet formula

$$\int_M K dA + \int_{\partial M} k_g ds = 2\pi\chi(M)$$

4. Cantor's theorem for natural numbers

$$2^{|S|} > |S|$$

5. Euler's formula

$$e^{ix} = \cos x + i \sin x$$

6. Euler's identity

$$1 + e^{i\pi} = 0$$
